10 examples of people first language are essential tools in promoting respectful and inclusive communication. People first language emphasizes the individual before their condition, disability, or characteristic, helping to avoid defining someone solely by a label. This approach fosters dignity and reduces stigma by focusing on the person rather than the diagnosis or situation. In various contexts, such as healthcare, education, and social services, using people first language can improve interactions and perceptions. This article explores ten practical examples of people first language, illustrating how to implement this respectful form of communication effectively. The following sections will provide detailed explanations and examples to guide proper usage.

Understanding People First Language

People first language is a communication style that prioritizes the individual before any descriptors related to disability, condition, or identity. It aims to emphasize the humanity of people rather than defining them by their challenges or characteristics. This linguistic approach arose from advocacy movements seeking to combat negative stereotypes and promote respect. By using people first language, speakers and writers highlight that a condition is only one aspect of a person's life and does not define their entire being. This method contrasts with identity-first language, which places the descriptor before the person, such as "autistic person." Each approach has contexts where it is preferred, but people first language remains widely accepted for fostering inclusivity and dignity.

Examples of People First Language in Disability Contexts

In disability advocacy and communication, people first language is crucial for respectful interaction. It recognizes individuals as unique persons rather than their disabilities. Below are common examples used in this context.

1. Person with a Disability

Instead of saying “disabled person,” the phrase “person with a disability” emphasizes the individual first. This usage acknowledges the disability but does not allow it to define the person fully.

2. Person Who Uses a Wheelchair

Rather than labeling someone as “wheelchair-bound,” saying “person who uses a wheelchair” focuses on the person’s mobility aid without suggesting limitation or confinement.

3. Individual with Hearing Loss

Replacing “deaf person” or “hearing impaired” with “individual with hearing loss” respects the person’s experience without reducing them to their condition.

- Person with a visual impairment
- Person with an intellectual disability
- Person with cerebral palsy

People First Language in Mental Health

Mental health communication benefits significantly from people first language, as it reduces stigma and encourages empathy. Using respectful language promotes understanding and compassion.

4. Person with Schizophrenia

Referring to someone as a “person with schizophrenia” rather than a “schizophrenic” helps separate the individual from the diagnosis, highlighting their personhood first.

5. Individual Experiencing Depression

The phrase “individual experiencing depression” acknowledges the condition while focusing on the person’s experience rather than defining them solely by their mental

health status.

People First Language in Medical Conditions

Medical communication also increasingly adopts people first language to maintain respect and professionalism. This approach ensures that patients are seen as whole individuals rather than just their illnesses.

6. Person with Diabetes

Instead of calling someone a “diabetic,” it is more respectful to say “person with diabetes.” This usage underscores that diabetes is one aspect of their health, not their identity.

7. Individual Living with Cancer

Using “individual living with cancer” rather than “cancer patient” or “cancer victim” highlights resilience and personhood beyond the illness.

Language Use in Educational Settings

In education, people first language supports inclusion and respect for students with diverse needs. It encourages educators and peers to see students as individuals first, promoting positive interactions.

8. Student with a Learning Disability

Referring to a “student with a learning disability” instead of a “learning disabled student” emphasizes the learner’s individuality and potential.

Workplace Communication and People First Language

Applying people first language in the workplace fosters an inclusive environment where employees are valued for their contributions rather than labeled by their conditions or circumstances.

9. Employee with a Chronic Illness

Describing someone as an “employee with a chronic illness” rather than a “chronically ill employee” respects their professional role and acknowledges their health status without defining them by it.

People First Language in Aging and Elder Care

In discussions about aging and elder care, people first language helps combat ageism and stereotypes, recognizing older adults as individuals with diverse experiences and abilities.

10. Older Adult with Mobility Challenges

Referring to an “older adult with mobility challenges” instead of an “elderly crippled person” or similar terms maintains dignity and respect for older individuals facing physical limitations.

Benefits of Using People First Language

Adopting people first language carries multiple benefits across social, professional, and personal domains. It promotes respect, reduces stigma, and encourages a more inclusive society. People first language also helps in creating positive perceptions that focus on abilities and individuality rather than limitations. In healthcare, education, and workplace environments, this approach improves communication and builds trust. Ultimately, people first language supports human dignity and fosters more compassionate interactions.

Tips for Adopting People First Language

Implementing people first language effectively requires awareness and practice. Below are practical tips to help incorporate this respectful communication style:

- Always place the person before the condition or characteristic.
- Avoid labels that reduce individuals to their diagnosis or traits.
- Use terms that the individual or community prefers whenever possible.
- Be mindful of context and audience to choose appropriate language.
- Correct language habits gently and encourage others to use people first language.
- Stay informed about evolving terminology and respectful communication standards.

Frequently Asked Questions

What is 'people first language' and why is it important?

People first language is a way of communicating that emphasizes the person before their disability or condition, promoting respect and dignity. It is important because it helps

reduce stigma and focuses on the individual's humanity rather than defining them by their diagnosis.

Can you give an example of people first language?

Yes, instead of saying 'a disabled person,' people first language would be 'a person with a disability.' This puts the person before the disability.

What are 10 examples of people first language?

Examples include: 1) Person with a disability; 2) Person with autism; 3) Person who uses a wheelchair; 4) Person with a mental health condition; 5) Person with epilepsy; 6) Person who is blind; 7) Person with Down syndrome; 8) Person with a learning disability; 9) Person with hearing loss; 10) Person with a chronic illness.

How does people first language differ from identity first language?

People first language puts the individual before the condition (e.g., 'person with diabetes'), while identity first language places the condition as an integral part of identity (e.g., 'autistic person'). Preferences vary within communities.

Is people first language always preferred?

Not always. While many advocate for people first language to promote respect, some communities prefer identity first language as a form of empowerment and acceptance. It's important to respect individual or community preferences.

Why should I use people first language when talking about disabilities?

Using people first language shows respect and recognizes the person beyond their disability. It helps combat stereotypes and promotes inclusion by focusing on the individual's abilities and humanity.

Can people first language be applied beyond disabilities?

Yes, people first language can be used in various contexts, such as mental health, chronic illnesses, and other conditions, to acknowledge the person first rather than defining them by a single characteristic.

How can I practice people first language in everyday communication?

To practice people first language, focus on mentioning the person before their condition, avoid labels that reduce someone to a diagnosis, and ask individuals how they prefer to be

described to ensure respectful communication.

10 examples of people first language: Psychology of Prejudice and Discrimination Mary E. Kite, Bernard E. Whitley, Jr., Lisa S. Wagner, 2022-07-25 *Psychology of Prejudice and Discrimination* provides a comprehensive and compelling overview of what psychological theory and research have to say about the nature, causes, and reduction of prejudice and discrimination. It balances a detailed discussion of theories and selected research with applied examples that ensure

the material is relevant to students. This edition has been thoroughly revised and updated and addresses several interlocking themes. It first looks at the nature of prejudice and discrimination, followed by a discussion of research methods. Next come the psychological underpinnings of prejudice: the nature of stereotypes, the conditions under which stereotypes influence responses to other people, contemporary theories of prejudice, and how individuals' values and belief systems are related to prejudice. Explored next are the development of prejudice in children and the social context of prejudice. The theme of discrimination is developed via discussions of the nature of discrimination, the experience of discrimination, and specific forms of discrimination, including gender, gender identity, sexual orientation, age, ability, and appearance. The concluding theme is the reduction of prejudice. The book is accompanied by a comprehensive website featuring an Instructor Manual that contains activities and tools to help with teaching a prejudice and discrimination course; PowerPoint slides for every chapter; and a Test Bank with short answer and multiple-choice exam questions for every chapter. This book is an essential companion for all students of prejudice and discrimination, including those in psychology, education, social work, business, communication studies, ethnic studies, and other disciplines. In addition to courses on prejudice and discrimination, this book will also appeal to those studying racism and diversity.

10 examples of people first language: Bilingual First Language Acquisition Annick De Houwer, 2009-02-17 Increasingly, children grow up hearing two languages from birth. This comprehensive textbook explains how children learn to understand and speak those languages. It brings together both established knowledge and the latest findings about different areas of bilingual language development. It also includes new analyses of previously published materials. The book describes how bilingually raised children learn to understand and use sounds, words and sentences

in two languages. A recurrent theme is the large degree of variation between bilingual children. This variation in how children develop bilingually reflects the variation in their language learning environments. Positive attitudes from the people in bilingual children's language learning environments and their recognition that child bilingualism is not monolingualism-times-two are the main ingredients ensuring that children grow up to be happy and expert speakers of two languages.

10 examples of people first language: The impact of information and communication technology (ICT) on international trade in agri-food products

Franziska Thiemann, 2013-11-13 The rapid diffusion of information and communication technologies (ICT) is believed to be one of several important drivers of international trade and globalisation. The purpose of this dissertation was to analyse whether the three ICT - fixed telephone lines, mobile phones, and the internet - has encouraged international trade in important agri-food products. Gravity models of bilateral trade between countries were chosen to explain international trade. We used panel data of the values of bilateral trade between pairs of countries for the period 1995 to 2009. The empirical results from OLS and negative binomial regression estimation suggest that ICT has an effect on international trade in agri-food products. The impact is, however, not always strong and, contrary to expectations, it is often negative. For the products, 'wine' and 'fruit and vegetable juice', we found no effect of ICT

on trade at all. Although there is great variation in the estimated impacts of individual ICT on international trade, the impact of mobile phones is somewhat stronger than that of fixed telephone lines and of the internet. Die rasante Verbreitung von Informations- und Kommunikationstechnologien (IKT) gilt als einer von vielen treibenden Kräften des internationalen Handels und der Globalisierung. Ziel dieser Dissertation war es herauszufinden, ob die drei IKT - Festnetztelefone, Mobiltelefone und Internet - den internationalen Handel von wichtigen Agrar- und Ernährungsgütern fördert. Gravitationsmodelle des bilateralen Handels wurden ausgewählt um den internationalen Handel zu erklären. Paneldaten wurden genutzt um den bilateralen Handel zweier Länder zwischen den Jahren 1995 und 2009 zu analysieren. Die empirischen Ergebnisse der OLS Schätzung und der negativ binominalen Regression zeigen, dass IKT einen Effekt auf das Handelsvolumen von Agri-food Produkten ausübt. Der Einfluss ist nicht immer stark und entgegengesetzt der Erwartungen, ist der geschätzte Einfluss häufig negativ. Lediglich bei ‚Wein‘ und bei ‚Obst- und Gemüsesäften‘ konnte kein Einfluss von einem speziellen IKT auf den Handel nachgewiesen werden. Obwohl es große Variationen bei den geschätzten Effekten von einzelnen IKT auf den internationalen Handel gibt, ist der Einfluss von Mobiltelefonen größer als der von Festnetztelefonen und dem Internet.
