1 research ct rockville md: *Genetic Hearing Impairment* C. W. R. J. Cremers, R. J. H. Smith, 2002-07 A decade of innovative findings in the research of molecular biology of hearing and deafness is reflected in this volume. The genetic causes for many types of syndromic and non-syndromic deafness are identified and genotypic-phenotypic relationships are explored. Although the type and degree of deafness caused by mutations in different genes significantly overlap, relatively unique age-related audiometric profiles are also emerging. For example, the audioprofile of DFNA1 and DFNA6-14 is a low-frequency sensorineural hearing loss; with DFNA8-14 it is a mid-frequency sensorineural hearing loss, and with DFNA2, DFNA5 and DFNA20-26 it is a high-frequency progressive hearing loss. Recognizing such audioprofiles can facilitate well-guided decision-making in clinical practice and can direct genetic testing for deafness. With an accurate genetic diagnosis, prognostic information can be provided to patients and their families. In the future, gene-specific habilitation options may also become available. To keep up to date with new clinical standards of diagnosing genetic hearing impairment, this book is indispensable reading to otorhinolaryngologists and audiologists.

1 research ct rockville md: *A Great Meeting Needs a Great Treasurer!* Colette Collier Trohan, 2017-02-03 Have you ever known a person elected as treasurer who works into the wee hours to keep their association or club finances in perfect balance? Whether using an abacus, stones, a calculator, or fingers and toes, the job is all about being able to answer basic questions about the financial assets of the association. The fundamental nature of the treasurer's position is more closely linked to the size of the association than any of the other leadership positions. The treasurer of a local club will likely be the sole keeper of the association's financial records and perform all of the tasks associated with the position, while the treasurer of a large national association will probably

never write a check or make a deposit. We refer to the treasurer who performs the financial tasks as the practicing treasurer, and the treasurer who works with a paid staff who performs the financial tasks as the fiduciary treasurer. Whatever the tasks, all treasurers have the responsibility to serve as the elected custodian of the association's funds. Like the other tools in the Great Leaders Collection, there are two sections: a front section that explains how to make the financial handoff from one treasurer to another, basic records, and instructions for conducting audits, creating budgets, and other financial reports; the back section contains forms and templates for invoices, receipts, reimbursements, and a variety of reports. Sample financial policies are also included. Where procedural rules are quoted, they are substantially in conformance with the rules contained in Robert's Rules of Order Newly Revised, eleventh edition (Da Capo Press 2011), also called RONR, and American Institute of Parliamentarians Standard Code of Parliamentary Procedure (McGraw Hill, 2012), also called AIPSC. However, for clarity and ease of use by the average member, some of the more detailed points of these books have been omitted. For complex situations, we suggest that the reader refer to the association's specific parliamentary authority. Additional information has been included that is based on the author's experience with boards of directors and organizations throughout the country. A Great Meeting Needs a Great Treasurer is the perfect resource for the treasurer.

1 research ct rockville md: *Collected Papers of Carl Wieman* C. E. Wieman, 2008 Carl Wieman's contributions have had a major impact on defining the field of atomic physics as it exists today. His ground-breaking research has included precision laser spectroscopy; using lasers and atoms to provide important table-top tests of theories of elementary particle physics; the development of techniques to cool and trap atoms using laser light, particularly in inventing much simpler, less expensive ways to do this; the understanding of how atoms interact with one another and light at ultracold temperatures; and the creation of the first BoseOCoEinstein condensation in a dilute gas, and the study of the properties of this condensate. In recent years, he has also turned his attention to physics education and new methods and research in that area. This indispensable volume presents his collected papers, with annotations from the author, tracing his fascinating research path and providing valuable insight about the significance of the works. Sample Chapter(s). Introduction (197 KB). Contents: Precision Measurement and Parity Nonconservation; Laser Cooling and Trapping; BoseOCoEinstein Condensation; Science Education; Development of Research Technology.
