Frequently Asked Questions

What is the primary cause of climate change?

The primary cause of climate change is the increased concentration of greenhouse gases in the atmosphere, mainly due to human activities such as burning fossil fuels, deforestation, and industrial processes.

How does the greenhouse effect contribute to global warming?

The greenhouse effect occurs when greenhouse gases trap heat from the sun in the Earth's atmosphere, leading to an increase in global temperatures and contributing to global warming.

What are some common greenhouse gases responsible for climate change?

Common greenhouse gases include carbon dioxide (CO₂), methane (CH₄), nitrous oxide (N₂O), and fluorinated gases.

What impact does climate change have on sea levels?

Climate change causes sea levels to rise primarily due to the melting of glaciers and ice caps, and the thermal expansion of seawater as it warms.

What role do human activities play in accelerating climate change?

Human activities such as burning fossil fuels, deforestation, and industrial emissions increase greenhouse gas levels, accelerating the natural greenhouse effect and leading to faster climate change.

How can renewable energy sources help mitigate climate change?

Renewable energy sources like solar, wind, and hydroelectric power produce little to no greenhouse gas emissions, reducing reliance on fossil fuels and helping to mitigate climate change.

What is the significance of the Paris Agreement in combating climate change?

The Paris Agreement is an international treaty aiming to limit global warming to well below 2°C above pre-industrial levels by reducing greenhouse gas emissions worldwide.

How does deforestation contribute to climate change?

Deforestation contributes to climate change by reducing the number of trees that absorb

CO₂, and the process of clearing trees often releases stored carbon into the atmosphere.

What are some effects of climate change on biodiversity?

Climate change affects biodiversity by altering habitats, causing shifts in species distribution, increasing extinction risks, and disrupting ecosystems.
