be a problem solver bulletin board: Fostering Children's Mathematical Power Arthur J. Baroody, Ronald T. Coslick, 1998-09-01 Teachers have the responsibility of helping all of their students construct the disposition and knowledge needed to live successfully in a complex and rapidly changing world. To meet the challenges of the 21st century, students will especially need mathematical power: a positive disposition toward mathematics (curiosity and self confidence), facility with the processes of mathematical inquiry (problem solving, reasoning and communicating), and well connected mathematical knowledge (an understanding of mathematical concepts, procedures and formulas). This guide seeks to help teachers achieve the capability to foster children's mathematical power - the ability to excite them about mathematics, help them see that it makes sense, and enable them to harness its might for solving everyday and extraordinary problems. The investigative approach attempts to foster mathematical power by making mathematics instruction process-based, understandable or relevant to the everyday life of students. Past efforts to reform mathematics instruction have focused on only one or two of these aims, whereas the investigative approach accomplishes all three. By teaching content in a purposeful context, an inquiry-based fashion, and a meaningful manner, this approach promotes children's mathematical learning in an interesting, thought-provoking and comprehensible way. This teaching guide is designed to help teachers appreciate the need for the investigative approach and to provide practical advice on how to make this approach happen in the classroom. It not only dispenses information, but also serves as a catalyst for exploring, conjecturing about, discussing and contemplating the teaching and learning of mathematics.

Clarkl is a planet of cold days and even colder nights. Although Clarkl's star is not visible from Earth, Clarkl's advanced technology allows its natives to visit Earth and take Earthlings back to Clarkl for work. In the early 2070s, the American government entered into a contract with the people of Clarkl to manage and staff farms and kitchens to feed some of the large numbers of Clarkl natives who are faced with the planet's ever-present famine. The American government received certain critical minerals from Clarkl, and the Clarklians received the services of farmers and cooks. This novel presents the diaries of five Americans who went to Clarkl for work in the dining rooms. They left troubling problems on Earth to go to Clarkl for a guaranteed monthly income and a decade of hard work. The diaries discuss the ugly Clarkl natives, with all seven sexes described. Three imaginative illustrations by Lance Jackson show these natives.
