

beckman center for molecular and genetic medicine

beckman center for molecular and genetic medicine is a premier research institution dedicated to advancing the understanding of molecular biology and genetic science. This center plays a crucial role in pioneering innovative research, integrating cutting-edge technologies, and fostering collaborations among scientists and clinicians to unravel the complexities of human genetics and molecular mechanisms. The beckman center for molecular and genetic medicine contributes significantly to the development of new diagnostic tools, therapeutic strategies, and personalized medicine approaches. This article explores the center's history, research focus, technological advancements, educational initiatives, and its impact on the broader medical and scientific community. By delving into these areas, readers will gain a comprehensive understanding of how this institution shapes the future of molecular and genetic medicine. The following sections will provide an organized overview of the center's multifaceted contributions and ongoing projects.

- History and Mission of the Beckman Center
- Research Focus and Key Areas
- Technological Innovation and Resources
- Educational and Training Programs
- Collaborations and Community Impact

History and Mission of the Beckman Center

The beckman center for molecular and genetic medicine was established to serve as a hub for pioneering research in molecular biology and genetics. Its mission centers on accelerating scientific discovery to improve human health through advanced research and interdisciplinary collaboration. Founded with the vision of integrating molecular and genetic research, the center has grown into a globally recognized institution that supports innovative projects aimed at understanding disease mechanisms at a molecular level.

Founding Principles and Vision

The center was founded with the goal of bridging basic molecular science with clinical applications, emphasizing translational research that moves discoveries from the laboratory to patient care. This vision prioritizes the integration of genetics, molecular biology, and medicine to create new opportunities for disease diagnosis, treatment, and prevention.

Institutional Growth and Development

Over the years, the beckman center for molecular and genetic medicine has expanded its infrastructure and research capabilities. It has attracted leading scientists and clinicians, fostering an environment conducive to groundbreaking research. Its growth reflects a commitment to maintaining advanced laboratories equipped with the latest technologies and supporting a diverse range of molecular and genetic projects.

Research Focus and Key Areas

The beckman center for molecular and genetic medicine concentrates on several critical research domains that address fundamental questions in genetics and molecular biology. These areas are designed to investigate the molecular underpinnings of health and disease, with the ultimate goal of translating findings into clinical innovations.

Genomic Medicine and Personalized Therapies

One of the primary focuses is genomic medicine, which involves studying genetic variations to understand disease susceptibility and treatment responses. Researchers at the center develop personalized therapies tailored to individual genetic profiles, enhancing the efficacy and safety of medical interventions.

Molecular Mechanisms of Disease

The center investigates molecular pathways that contribute to diseases such as cancer, neurodegenerative disorders, and inherited genetic conditions. Understanding these mechanisms enables the identification of novel drug targets and biomarker development for early diagnosis.

Gene Editing and Functional Genomics

Advanced gene editing technologies, including CRISPR-Cas9, are employed to manipulate genetic sequences, allowing scientists to study gene function and correct mutations. Functional genomics approaches at the center provide insight into gene expression patterns and regulatory networks critical to cellular processes.

Technological Innovation and Resources

Technological advancement is a cornerstone of the beckman center for molecular and genetic medicine, providing the essential tools and platforms necessary for cutting-edge research. The center is equipped with state-of-the-art facilities that support diverse experimental approaches in molecular and genetic studies.

High-Throughput Sequencing and Bioinformatics

The center utilizes high-throughput sequencing technologies that enable rapid, large-scale DNA and RNA analysis. Complementing this is a robust bioinformatics infrastructure that processes and interprets complex genomic data, facilitating discoveries in gene function and disease association.

Advanced Imaging and Molecular Analysis

Innovative imaging technologies, such as fluorescence microscopy and live-cell imaging, allow researchers to visualize molecular interactions and cellular dynamics in real time. These tools are integral to studying molecular mechanisms at a detailed level.

Core Facilities and Support Services

The beckman center maintains several specialized core facilities that provide expert technical support and access to advanced instrumentation. These include:

- Genomics and sequencing cores
- Proteomics and mass spectrometry labs
- Cell culture and gene editing platforms
- Computational biology and data analysis units

Educational and Training Programs

The beckman center for molecular and genetic medicine is committed to nurturing the next generation of scientists and clinicians through comprehensive educational programs. These initiatives emphasize hands-on training, interdisciplinary collaboration, and exposure to the latest research methodologies.

Graduate and Postdoctoral Training

The center offers specialized training programs for graduate students and postdoctoral fellows focused on molecular genetics and translational medicine. These programs provide mentorship, laboratory experience, and opportunities to participate in collaborative research projects.

Workshops and Seminars

Regular workshops and seminars are organized to disseminate knowledge on emerging technologies, recent scientific advances, and clinical applications. These events foster intellectual exchange and keep trainees and faculty updated on cutting-edge developments.

Outreach and Public Education

The center engages in outreach activities aimed at educating the public and raising awareness about molecular and genetic medicine. These efforts include community lectures, informational sessions, and partnerships with educational institutions.

Collaborations and Community Impact

Collaboration is fundamental to the Beckman Center for Molecular and Genetic Medicine's success. The center works closely with academic institutions, healthcare providers, industry partners, and government agencies to enhance research impact and translate discoveries into clinical practice.

Academic and Clinical Partnerships

The center maintains strong ties with universities and hospitals, facilitating translational research that bridges laboratory findings with patient care. These partnerships enable clinical trials, biomarker validation, and development of novel therapeutics.

Industry Collaboration and Innovation

Collaborative projects with pharmaceutical and biotechnology companies accelerate the commercialization of scientific discoveries. These partnerships support drug development, diagnostic tool creation, and the advancement of precision medicine.

Community Health Initiatives

The Beckman Center contributes to public health by supporting genetic screening programs, disease prevention strategies, and educational campaigns. Its work helps address health disparities and promotes equitable access to genetic services.

Frequently Asked Questions

What is the Beckman Center for Molecular and Genetic Medicine?

The Beckman Center for Molecular and Genetic Medicine is a research institute dedicated to advancing the understanding of molecular and genetic mechanisms underlying human health and disease.

Where is the Beckman Center for Molecular and Genetic

Medicine located?

The Beckman Center for Molecular and Genetic Medicine is located at Stanford University in Stanford, California.

What are the primary research areas at the Beckman Center for Molecular and Genetic Medicine?

Primary research areas include molecular biology, genetics, genomics, cell biology, and biomedical engineering aimed at understanding and treating various diseases.

Who founded the Beckman Center for Molecular and Genetic Medicine?

The Beckman Center was established with support from the Arnold and Mabel Beckman Foundation, named after Arnold Beckman, a prominent chemist and inventor.

What types of technologies are developed at the Beckman Center for Molecular and Genetic Medicine?

The center develops cutting-edge technologies such as next-generation sequencing, CRISPR gene editing, advanced microscopy, and computational biology tools.

How does the Beckman Center contribute to personalized medicine?

By studying genetic variations and molecular pathways, the Beckman Center helps develop targeted therapies tailored to individual patients' genetic profiles.

Are there any notable collaborations involving the Beckman Center for Molecular and Genetic Medicine?

Yes, the Beckman Center collaborates with various academic institutions, hospitals, and industry partners to accelerate translational research and clinical applications.

Can students and researchers access resources at the Beckman Center?

Yes, the Beckman Center provides state-of-the-art facilities, core laboratories, and training programs for students, postdocs, and faculty researchers.

What recent breakthroughs have been made at the Beckman Center for Molecular and Genetic Medicine?

Recent breakthroughs include advancements in gene therapy techniques, novel insights into cancer genetics, and innovative molecular diagnostics for rare diseases.

Additional Resources

1. *Advances in Molecular Medicine at the Beckman Center*

This book explores the groundbreaking research and innovations emerging from the Beckman Center for Molecular and Genetic Medicine. It highlights key discoveries in molecular biology, genetics, and biomedical engineering. Readers will gain insight into how interdisciplinary approaches at the center are driving new therapies and diagnostic tools.

2. *Genetic Medicine: Pioneering Research from the Beckman Center*

Focusing on the genetic research conducted at the Beckman Center, this volume delves into the latest techniques in gene editing, sequencing, and personalized medicine. It discusses how the center's work is transforming our understanding of hereditary diseases and developing targeted treatments. The book is ideal for students and professionals interested in genetic medicine.

3. *Beckman Center Innovations in Molecular Diagnostics*

This book provides a comprehensive overview of molecular diagnostic technologies developed and refined at the Beckman Center. It covers advances in biomarker discovery, high-throughput screening, and lab-on-a-chip devices. Detailed case studies illustrate the clinical impact of these innovations on disease detection and management.

4. *Interdisciplinary Approaches in Genetic Medicine: Insights from the Beckman Center*

Highlighting the collaborative research environment of the Beckman Center, this book examines how molecular biology, computational science, and clinical medicine intersect. It presents case studies where interdisciplinary efforts have led to breakthroughs in understanding complex genetic disorders. The text serves as a guide for fostering collaboration in biomedical research.

5. *Beckman Center Perspectives on Molecular Therapeutics*

This book discusses the development of novel molecular therapies emerging from the Beckman Center's research programs. Topics include RNA-based treatments, gene therapy, and small molecule drugs targeting genetic pathways. It provides an in-depth look at the translation of molecular discoveries into clinical applications.

6. *Structural Biology and Genetics at the Beckman Center*

Focusing on the structural aspects of biomolecules, this book details the cutting-edge research conducted at the Beckman Center. It explains how structural biology techniques, such as X-ray crystallography and cryo-EM, are used to understand genetic function and disease mechanisms. The book is valuable for readers interested in the molecular foundations of genetics.

7. *Beckman Center Contributions to Cancer Genetics*

This volume covers the extensive research on cancer genetics performed at the Beckman Center. It explores genetic mutations, epigenetic changes, and molecular pathways involved in tumor development and progression. The book also discusses novel diagnostic tools and therapeutic strategies stemming from the center's research.

8. *Emerging Technologies in Molecular and Genetic Medicine: The Beckman Center Model*

Highlighting the integration of new technologies at the Beckman Center, this book reviews advances in CRISPR, single-cell sequencing, and bioinformatics. It emphasizes how these tools are transforming research and clinical practice in molecular and genetic medicine. The text provides a forward-looking perspective on the future of biomedical research.

9. *Translational Medicine at the Beckman Center: Bridging Bench to Bedside*

This book focuses on the translational research efforts at the Beckman Center that move molecular discoveries into clinical treatments. It covers examples of successful projects that have led to improved patient outcomes. The book is an essential resource for understanding the challenges and opportunities in translating genetic medicine.

Beckman Center For Molecular And Genetic Medicine

beckman center for molecular and genetic medicine: Advances in Enzymology and Related Areas of Molecular Biology Alton Meister, 2009-09-15 Enzymes a revised frequently in modifying proteins for specialized uses. These books cover the latest advances in this field and its applications in the field of molecular biology.

beckman center for molecular and genetic medicine: Journal of the National Cancer Institute , 1990

beckman center for molecular and genetic medicine: Adhesion Protein Protocols Amanda S. Coutts, 2008-02-03 The second edition of Adhesion Protein Protocols combines traditional techniques with cutting-edge and novel techniques that can be adapted easily to different molecules and cell types. The topics discussed include novel techniques for studying cell-cell adhesion, neutrophil chemotaxis, in vitro assays used to study leukocyte migration through monolayers of cultured endothelial cells, and novel techniques to purify pseudopodia from migratory cells. The protocols discussed in this volume are suitable for both novice and expert scientists, who will gain further insight into the complex and incompletely understood processes involved in cellular adhesion.

beckman center for molecular and genetic medicine: Molecular Neurobiology Steven Zalcman, Richard Scheller, Richard W. Tsien, 1994 Covers: channels; secretory vesicles and exocytosis; receptors/coupling mechanisms; synaptic plasticity; modulatory factors; and protein kinases and control of gene expression. Includes both abstracts of papers, and poster sessions. Illustrated.

beckman center for molecular and genetic medicine: Cell Motility Anne Ridley, Michelle Peckham, Peter Clark, 2005-04-08 Recent advances in molecular and biophysical techniques, particularly fluorescence and live cell imaging, are revolutionizing the study of cell motility. New bioprobes not only reveal simple intracellular localization, but also contain details of post-translational modifications, conformational state and protein-protein interactions. Coupling these insights with complementary advances in genetic and biochemical methods is enabling scientists to understand the processes involved in cell motility - from molecular motors to cell movements in vivo in a range of organisms and cell types. This book features landmark essays that provide an up to date and fascinating account of current research and concepts in cell motility. These cover the roles of molecular motors that drive movement and their interactions with the cytoskeleton as well as membrane dynamics that allow cells to change shape and to move. Cell motility plays a key role in development - there are chapters on the genetics of cell migration, the regulation of contact repulsion in growth cones, and the progression from cell migration to cell-cell adhesion. Cell motility is directional - experts describe the molecules that regulate chemotaxis, allowing cells to migrate along pathways specified by chemical gradients. Finally, cell motility can be perturbed by

mutation--metastasis occurs when cells lose their normal intercellular interactions and invade other tissue types. All these processes are regulated by signals from the environment, including other tissues in the body, and the various molecules that transmit and transduce these signals are discussed. This book is a 'must read' for cell biologists working in a variety of fields, from development to wound healing, at all levels - post-doctoral fellows, post-graduate students and lab technicians. It is also stimulating reading for molecular and developmental biologists, biophysicists and biochemists.

beckman center for molecular and genetic medicine: The Pigmentary System James J. Nordlund, Raymond E. Boissy, Vincent J. Hearing, Richard A. King, William S. Oetting, Jean-Paul Ortonne, 2008-04-15 The most comprehensive and integrated book on pigmentation The Pigmentary System, Second Edition, gathers into one convenient, all-inclusive volume a wealth of information about the science of pigmentation and all the common and rare clinical disorders that affect skin color. The two parts, physiology (science) and pathophysiology (clinical disorders), are complementary and annotated so that those reading one part can easily refer to relevant sections in the other. For the clinician interested in common or rare pigment disorders or the principles of teaching about such disorders, this book provides an immediate and complete resource on the biologic bases for these disorders. For the scientist studying the biology of melanocyte function, the book provides a list of disorders that are related to basic biological functions of melanocytes. New features of this Second Edition include: Completely new section on the basic science of pigmentation - explaining the integration of melanocyte functions with other epidermal cells and with various organ systems like the immune system New chapters on pigmentary disorders related to intestinal diseases, the malignant melanocyte, benign proliferations of melanocytes (nevi) and phototherapy with narrow band UV All clinical chapters include the latest genetic findings and advances in therapy More than 400 color images of virtually all clinical disorders The book is ideal for all dermatologists and especially those interested in disorders of pigmentation. It is of particular use for pediatric dermatologists and medical geneticists caring for patients with congenital and genetic pigmentary disorders. This authoritative volume will fill the gap for dermatology training programs that do not have local experts on pigmentation. Basic and cosmetic scientists studying pigmentation and melanocytes will find the science and clinical correlations very useful in showing human significance and relevance to the results of their studies.

beckman center for molecular and genetic medicine: Finding the Path National Research Council, Division on Earth and Life Studies, Commission on Life Sciences, Committee on Federal Policy for Access to Research Resources, 1999-10-28 On January 27-28, 1999, the NRC Commission on Life Sciences organized Finding the Path: Issues of Access to Research Resources, a conference to explore the breadth of problems and opportunities related to obtaining and transferring research resources. The following summary of the 2-day meeting lays out the problems concerning access to research resources as discussed by 2 dozen speakers and members of the audience.

beckman center for molecular and genetic medicine: A to Z of Biologists Lisa Yount, 2014-05-14 Profiles more than 150 scientists from around the world who made important contributions to the field of biology, including Claude Bernard, Alexander Fleming, Mary-Claire King, Ronald Ross, and Tetsuko Takabe.

beckman center for molecular and genetic medicine: Beyond Disruption George P. Shultz, Jim Hoagland, James Timbie, 2018-06-01 In Beyond Disruption: Technology's Challenge to Governance, George P. Shultz, Jim Hoagland, and James Timbie present views from some of the country's top experts in the sciences, humanities, and military that scrutinize the rise of post-millennium technologies in today's global society. They contemplate both the benefits and peril carried by the unprecedented speed of these innovations—from genetic editing, which enables us new ways to control infectious diseases, to social media, whose ubiquitous global connections threaten the function of democracies across the world. Some techniques, like the advent of machine learning, have enabled engineers to create systems that will make us more productive. For example, self-driving vehicles promise to make trucking safer, faster, and cheaper. However, using big data

and artificial intelligence to automate complex tasks also ends up threatening to disrupt both routine professions like taxi driving and cognitive work by accountants, radiologists, lawyers, and even computer programmers themselves.

beckman center for molecular and genetic medicine: *Cell Migration* Jun-Lin Guan, 2008-02-02 A collection of classic, novel, and state-of-the-art methods for the study of cell migration in cultured cells, different model organisms, and specialized cells in normal development and disease. Highlights include basic assays that apply to all cell migration studies in vitro, assays in various model organisms, and assays for cancer cells, endothelial cells, and neurons both in vitro and in animal models. The protocols follow the successful *Methods in Molecular Biology*TM series format, each offering step-by-step laboratory instructions, an introduction outlining the principle behind the technique, lists of the necessary equipment and reagents, and tips on troubleshooting and avoiding known pitfalls.

beckman center for molecular and genetic medicine: *Progress in Immunology* L. Nicklin, Fritz Melchers, E.D. Albert, H. v. Boehmer, M.P. Dierich, L. Du Pasquier, K. Eichmann, D. Gems, O. Götze, J.R. Kalden, S.H.E. Kaufmann, H. Kirchner, K. Resch, G. Riethmüller, A. Schimpl, C. Sorg, M. Steinmetz, H. Wagner, H.G. Zachau, 2012-12-06 Never has so much progress been reported in immunology as at this congress. The full impact of new technologies, developed since the late 1970s, has come to fruition: gene isolation, mutation, transfection and expression, protein structure and peptide synthesis, cell cloning, hybridization and monoclonal antibodies, CD serology, SCID and transgenic mice, modern immunomodulation and vaccines. An overwhelming mass of data has accumulated over the last years. The reports are up-to-date and outstanding, to a degree no journal will ever achieve, and the results are presented in a concise and lucid way. This report will serve as a guideline for generations of immunologists to come. Hundreds of new alleys have been opened, an abundance of research tools and goals are pointed to. This volume is a treasure trove of explorations ahead of our time - it is exciting reading. This progress report presents outstanding contributions, worth many prizes - a feature which is unusual for proceedings volumes. Immunology is exhibited at its best: an exciting research area and a rewarding subject to study for the benefit of mankind - today more than ever!

beckman center for molecular and genetic medicine: *Biography Of Paul Berg, A: The Recombinant Dna Controversy Revisited* Errol C Friedberg, 2014-06-17 With a Foreword by Sydney Brenner (Nobel laureate in Physiology or Medicine, 2002) This biography details the life of Paul Berg (Emeritus Professor at Stanford University), tracing Berg's life from birth, in 1926, to the present, with special emphasis on his enormous scientific contributions, including being the first to develop technology that led to gene cloning science. In 1980, Berg received a Nobel Prize in chemistry for this work. In addition to his contributions in the research laboratory, Berg orchestrated and oversaw a historic meeting at Asilomar, California that centered on a threatening controversy surrounding the perception by some of the harmful potential of recombinant DNA technology. This meeting did much to forestall this controversy and to put in place the regulation of recombinant DNA work, thus putting fears to rest. The recombinant DNA controversy was a historic outcome of the discovery of gene cloning. Notably, it represented a paramount example of scientific foresight and due diligence by the scientific community, rather than by regulatory entities in the United States and many other countries. The ultimate acceptance of gene/DNA cloning led to a new era of modern biology that thrives to the present. This book is aimed primarily at scientists and those in training. The book strives to simply provide information for the general reader, but is not specifically tailored for a general reading audience. While many books cover the recombinant DNA controversy, none have satisfactorily addressed this historic period and are often contradictory about the many who's, where's, and why's involved. Additionally, the great majority of these were written by non-scientists. This biography of Paul Berg provides access to numerous archived letters and documents at Stanford University not previously addressed, and to the chronology of events as recalled and documented by him, as well as other key personalities, many of whom were interviewed.

beckman center for molecular and genetic medicine: *Serafino Zappacosta and the*

Ceppellini School: A Pioneer Model For Nurturing Education in Immunology Francesca Di Rosa, Ennio Carbone, 2020-12-21 We acknowledge the initiation and support of this Research Topic by the International Union of Immunological Societies (IUIS). We hereby state publicly that the IUIS has had no editorial input in articles included in this Research Topic, thus ensuring that all aspects of this Research Topic are evaluated objectively, unbiased by any specific policy or opinion of the IUIS.

beckman center for molecular and genetic medicine: Memorial Tributes National Academy of Engineering, 2015-10-06 This is the 19th Volume in the series Memorial Tributes compiled by the National Academy of Engineering as a personal remembrance of the lives and outstanding achievements of its members and foreign associates. These volumes are intended to stand as an enduring record of the many contributions of engineers and engineering to the benefit of humankind. In most cases, the authors of the tributes are contemporaries or colleagues who had personal knowledge of the interests and the engineering accomplishments of the deceased. Through its members and foreign associates, the Academy carries out the responsibilities for which it was established in 1964. Under the charter of the National Academy of Sciences, the National Academy of Engineering was formed as a parallel organization of outstanding engineers. Members are elected on the basis of significant contributions to engineering theory and practice and to the literature of engineering or on the basis of demonstrated unusual accomplishments in the pioneering of new and developing fields of technology. The National Academies share a responsibility to advise the federal government on matters of science and technology. The expertise and credibility that the National Academy of Engineering brings to that task stem directly from the abilities, interests, and achievements of our members and foreign associates, our colleagues and friends, whose special gifts we remember in this book.

beckman center for molecular and genetic medicine: Immunoneurology Michel Chofflon, Lawrence Steinman, 2012-12-06 A considerable amount of information has been gathered in the field of immunoneurology over recent years. This knowledge about modifications in the pathways of neuroimmune diseases has enabled the development of new therapies. In this volume leading experts present the state of the art in the field, covering all aspects from basic science to the development of better therapies.

beckman center for molecular and genetic medicine: Antimicrobial Resistance: Factors to Findings Vijay Soni, Ajay Suresh Akhade, 2024-09-10 Antimicrobial resistance (AMR) is increasing globally at an incredible rate, and many infectious diseases have already reached an alarming stage of resistance to existing treatments. WHO reports that nearly 1.27 million people currently die each year due to resistant infections, and AMR is projected to account for 10 million annual deaths globally by 2050. There is an urgent need for novel approaches to address this issue. Omics technologies are powerful research tools used extensively to study pathogen biology and the activity of microbial agents. These tools, paired with systems biology approaches, can provide novel insights into antimicrobial susceptibility and resistance, and aid in the development of new, more effective measures to combat resistant pathogens. This book provides a comprehensive overview of omics technologies to study pathogen biology, including proteomics, genomics, transcriptomics, metabolomics, and microbiome analysis, and the role of systems biology in developing strategies to combat resistant pathogens. It addresses environmental reservoirs and mobile genetic agents in AMR, host-pathogen interactions and physiology in the development of resistance, drug repurposing and development, and cutting-edge tools such as machine learning, AI for big data analysis, and genomic surveillance. The final section discusses future perspectives on omics-systems biology in AMR, and identifies opportunities for scientific collaboration in the global fight against antimicrobial resistance. This book serves as a comprehensive and accessible resource for researchers in academia and industry focused on immunology, drug development, biotechnology, and systems biology.

beckman center for molecular and genetic medicine: Transgenesis and Targeted Mutagenesis in Immunology, 2014-06-28 Investigations into the field of immunology are rapidly expanding with the use of genetically altered mice at the embryonic stage. This breakthrough

laboratory guide provides a complete study of transgenesis and targeted mutagenesis in laboratory mice that will be valued by researchers looking for fresh observations and interpretations when designing future experiments. Special Features Include: Contributions of two Nobel Prize winners Addresses the use of mouse models in studying the immune system Targets gene distribution in embryonic stem cells and their introduction into blastocyte mice models Analyzes the in vivo functional loss of embryonic cells A practical, useful guidebook for individual researchers, laboratories, and libraries

beckman center for molecular and genetic medicine: Genes And Genomes Maxine Singer, Paul Berg, 1991 The celebrated authors present an in-depth overview of the molecular structures and mechanisms that underlie the utilization of genetic information by complex organisms. They emphasize the experimental aspects of molecular genetics, offering a complete introduction to both principles and methods. Excellent, suitably detailed and superbly written. Philip Leder, Harvard Medical School

beckman center for molecular and genetic medicine: Encyclopedia of World Scientists, Updated Edition Elizabeth Oakes, 2020-07-01 Encyclopedia of World Scientists, Updated Edition is a comprehensive reference tool for learning about scientists and their work. It includes 500 cross-referenced profiles of well-known scientific greats of history and contemporary scientists whose work is verging on prominence. More than 100 entries are devoted to women and minority scientists. Each entry includes the subject's full name, dates of birth/death, nationality, and field(s) of specialization. A biographical essay focuses primarily on the subject's scientific work and achievements; it also highlights additional information, such as place of birth, parents' names and occupations, name(s) of spouse(s) and children, educational background, jobs held, and awards earned. Profiles include: Archimedes (c. 287–212 BCE): Mathematician Nicolaus Copernicus (1473–1543): Astronomer Galileo Galilei (1564–1642): Astronomer Daniel Bernoulli (1700–1782): Mathematician John James Audubon (1785–1851): Biologist Elizabeth Blackwell (1821–1910): Medical scientist Alfred Bernhard Nobel (1833–1896): Chemist Albert Einstein (1879–1955): Physicist Niels Bohr (1885–1962): Physicist George Washington Carver (c. 1861–1943): Chemist Marie Curie (1867–1934): Physicist and chemist Robert Hutchings Goddard (1882–1945): Aerospace engineer Edwin Powell Hubble (1889–1953): Astronomer Grace Murray Hooper (1906–1992): Computer scientist Dorothy Crowfoot Hodgkin (1910–1994): Chemist Jacques-Yves Cousteau (1910–1997): Earth scientist Alan Turing (1912–1954): Computer scientist Jonas Edward Salk (1914–1995): Medical scientist Rosalind Franklin (1920–1958): Chemist Jewel Plummer Cobb (1924–2017): Biologist Stephen Hawking (1942–2018): Astronomer.

beckman center for molecular and genetic medicine: Altered Fates Jeff Lyon, 1996 Traces the history of gene therapy research and discusses the politics involved in this medical revolution.
