beyond greens nutrition facts: *Raw and Beyond* Victoria Boutenko, Elaina Love, Chad Sarno, 2012-01-10 Three longtime raw foodists present a more balanced way to eat raw with over 100 delicious and nutritious recipes for raw, steamed, and lightly cooked dishes rich in Omega-3s. Victoria Boutenko, Elaina Love, and Chad Sarno have been leaders in the raw food movement since the 1990s. Since then, all three have independently arrived at the same conclusion: that a totally raw diet is not necessarily the best diet. One reason for their shift in thinking is the latest scientific research on the impact of omega essential fatty acids on human health. Studies show that if eaten in excess, Omega-6s can cause inflammation and obesity. A typical raw food diet contains large quantities of nuts and seeds, most of which are extremely high in omega-6s and low in Omega-3s. Raw foodists are not the only ones lacking sufficient Omega-3s in their diet. Because Omega-3s are easily damaged by heat, anyone whose diet is high in processed foods and oils probably has an Omega-3 deficiency. Many symptoms of this deficiency can be mistaken for other health problems or nutrient deficiencies, so few people realize the cause of their ailments. Boutenko's chapters on omegas provide readers more in-depth nutritional information. One hundred recipes—from raw to steamed and lightly cooked dishes, from appetizers to desserts—offer readers the means to enjoy a more sustainable, healthy, and energetic lifestyle.

beyond greens nutrition facts: *Biodiversity, Food and Nutrition* Danny Hunter, Teresa Borelli, Eliot Gee, 2020-04-29 This book examines the challenges and impacts of poor diets and nutrition from current food systems and the potential contribution of biodiversity and ecosystem services in addressing these problems. There is a strong need for a multi-level, cross-sectoral approach that connects food biodiversity conservation and sustainable use to address critical problems in our current food systems, including malnutrition. Building on research from the Biodiversity for Food and Nutrition Project (BFN), which aims to better link biodiversity, diets and nutrition, the book presents a multi-country, cross-sectoral analysis of initiatives that have promoted local food biodiversity in four countries: Brazil, Kenya, Turkey and Sri Lanka. This book offers a comprehensive summary of the BFN Project results in each of the four countries along with lessons learned and how this work could be upscaled or applied in other regions. It argues that the strategic promotion and use of food biodiversity is critical in uniting attempts to address conservation, nutrition and livelihood concerns. The book is structured around chapters and case studies encompassing the BFN Project with specific experiences related by partners who played key roles in the work being done in each country. By offering a comparative view capable of furthering dialogue between the respective countries, it is also meant to connect the individual cases for a "greater than the sum of its parts" effect. This means consideration of how localized activities can be adapted to more countries and regions. Therefore, the book addresses global issues with a foot planted firmly in the grounded case study locations. This book will be of great interest to policymakers, practitioners and NGOs working on food and nutrition, as well as students and scholars of agriculture, food systems and sustainable development.
