Overview of Big Ugly Wildlife Management Area

The Big Ugly Wildlife Management Area covers thousands of acres of protected land dedicated to the preservation of native flora and fauna. It is managed by state wildlife agencies with the primary goals of habitat conservation, wildlife population management, and providing public access for outdoor activities. The area's name derives from the Big Ugly Creek that runs through the region, contributing to the rich aquatic ecosystems found within. Its geographic location offers a mix of terrain, including rolling hills, dense woodlands, and riparian corridors. These diverse landscapes create a unique environment that supports a broad spectrum of species and ecological processes.

Geographic Location and Size

Located in the Appalachian region, Big Ugly Wildlife Management Area spans over 10,000 acres. The area is accessible by a network of forest roads and trails, making it a convenient destination for outdoor enthusiasts. Its proximity to nearby towns and cities allows for easy day trips or extended visits. The terrain varies from low-lying wetlands near the creek to elevated ridges, providing varied habitats for wildlife and opportunities for different types of recreational activities.

History and Establishment

The establishment of Big Ugly Wildlife Management Area was driven by the need to protect declining wildlife habitats and to create sustainable hunting and fishing grounds. Since its designation, management efforts have focused on restoring native vegetation, controlling invasive species, and monitoring wildlife populations. Over the decades, it has grown in size and importance, becoming a model for effective wildlife management in the region.

Wildlife and Habitat

Big Ugly Wildlife Management Area is home to a diverse array of wildlife species that thrive within its varied habitats. The area supports mammals, birds, reptiles, amphibians, and fish, making it a hotspot for biodiversity. The habitat types include hardwood forests, wetland marshes, grasslands, and riparian zones, each contributing to the ecological richness of the region. This diversity allows for complex food webs and natural interactions that are essential for ecosystem health.

Mammals and Birds

Mammalian species commonly found in the Big Ugly Wildlife Management Area include white-tailed deer, black bears, wild turkeys, and various small mammals such as squirrels and raccoons. Birdwatchers can observe an impressive variety of birds, including raptors like red-tailed hawks, songbirds, and waterfowl that frequent the wetlands. Seasonal migratory birds also use the management area as a stopover, enhancing its ecological significance.

Aquatic Life and Wetlands

The wetlands and streams within Big Ugly Wildlife Management Area harbor numerous fish species such as bass, catfish, and sunfish. Amphibians like frogs and salamanders are abundant in these aquatic environments, contributing to the area's ecological balance. The wetlands also serve as breeding grounds and provide critical habitat for many species, emphasizing the importance of water quality and habitat protection efforts.

Flora and Vegetation

The vegetation in the area is characterized by native hardwood trees such as oak, hickory, and maple, alongside understory shrubs and grasses. Seasonal wildflowers and native plants support pollinators and contribute to the visual appeal of the landscape. Management practices aim to maintain and restore native plant communities while controlling invasive species that threaten biodiversity.

Recreational Opportunities

Big Ugly Wildlife Management Area offers a wide range of recreational activities catering to hunters, anglers, hikers, and nature enthusiasts. The area's management ensures that these activities are conducted sustainably, minimizing impacts on wildlife and habitats. Visitors can enjoy year-round outdoor experiences enriched by the natural beauty and wildlife diversity of the region.

Hunting and Fishing

Hunting in the Big Ugly Wildlife Management Area is regulated by state laws to ensure sustainable wildlife populations. Popular game species include white-tailed deer, wild turkey, and small game such as squirrel and rabbit. Fishing opportunities abound in the management area's creeks and ponds, with anglers targeting species like bass and catfish. Seasonal hunting and fishing seasons are strictly enforced to protect breeding periods and maintain ecological balance.

Hiking and Wildlife Viewing

The area features several trails that provide excellent opportunities for hiking and wildlife observation. These trails traverse diverse habitats, allowing visitors to experience the full range of the area's ecological communities. Birdwatchers and photographers often visit to document the rich avian and mammalian life. Interpretive signage along some trails educates visitors about the local ecology and conservation efforts.

Camping and Other Activities

While camping facilities are limited, certain designated areas within or near the Big Ugly Wildlife Management Area provide primitive camping options. The area is also suitable for horseback riding, nature study, and environmental education programs. These activities complement the area's primary focus on wildlife conservation and sustainable recreation.

- Hunting: regulated seasons and species
- Fishing: freshwater species in creeks and ponds
- Hiking: multiple trails with wildlife viewing opportunities
- Wildlife photography and birdwatching
- Primitive camping and horseback riding

Conservation and Management Practices

Conservation efforts in Big Ugly Wildlife Management Area are designed to preserve ecosystems while supporting sustainable public use. The area is actively managed through habitat restoration, population monitoring, and enforcement of regulations. These efforts ensure that the area's natural resources remain healthy and productive for future generations.

Habitat Restoration and Maintenance

Restoration projects focus on reestablishing native plant communities, improving water quality, and controlling invasive species. Controlled burns, selective timber harvesting, and reforestation are common techniques used to maintain habitat diversity. These practices help create favorable conditions for native wildlife and improve the resilience of the ecosystem.

Wildlife Population Management

Regular wildlife surveys and monitoring allow managers to assess population health and adjust management strategies accordingly. Hunting regulations, such as bag limits and season lengths, are based on scientific data to ensure sustainable harvests. Predator control and habitat enhancement measures are implemented as needed to maintain balanced wildlife communities.

Public Education and Outreach

Educational programs and signage within the Big Ugly Wildlife Management Area raise awareness about conservation goals and responsible recreation. Collaboration with local schools, conservation groups, and volunteers enhances community involvement. These efforts foster stewardship and support for ongoing management initiatives.

Visitor Information and Regulations

Visitors to Big Ugly Wildlife Management Area must adhere to specific rules and guidelines to protect the area's natural resources and ensure safety. Understanding these regulations is essential for a responsible and enjoyable visit. Information on access points, permitted activities, and seasonal restrictions is provided by managing agencies.

Access and Permits

Access to the management area is typically free or requires a valid hunting or fishing license for

certain activities. Some areas may require special permits for camping or group events. Visitors should check with local wildlife offices for the most current access information and any temporary closures or restrictions.

Rules and Safety Guidelines

Rules include restrictions on motorized vehicle use, prohibitions on littering, and guidelines for wildlife interactions. Hunters and anglers must comply with state regulations, including licensing and reporting requirements. Safety measures, such as wearing blaze orange during hunting seasons and practicing firearm safety, are strongly emphasized.

Seasonal Considerations

Seasonal variations affect the availability of recreational opportunities and wildlife activity. Hunting seasons are designated to coincide with sustainable harvest periods, while certain trails or areas may be closed during sensitive times such as nesting or spawning. Visitors are encouraged to plan their trips according to seasonal conditions and management advisories.

big ugly wildlife management area: Lincoln County Ralph D. Triplett, Boone Triplett, 2013
Lincoln County was named for Pres. Abraham Lincoln, and the county seat, Hamlin, was likely named for his vice president, Hannibal Hamlin. Created out of Boone, Cabell, Kanawha, and Putnam Counties in 1867, Lincoln County is characterized by the geographic oddity of three north-flowing rivers: Guyandotte, Mud, and Coal. The county developed around its rivers and their tributaries, strategically using them to operate mills and transport goods. Timbering was its first major industry, and readers will see images of the log rafts and push boats that operated along these streams. Arrival of the railroad in the early 20th century opened another transportation artery. There was also a major oil boom around this time. Fossil fuels have remained important to the county's economy, particularly natural gas and coal. Lincoln County highlights what life was like in area communities such as West Hamlin, Branchland, Harts, Hamlin, Griffithsville, and Alum Creek.
