biggest civil engineering firms: Renewable Energy in East Asia Christopher M. Dent, 2014-11-27 Energy is crucial to the functioning of any human society and central to understanding

East Asia's 'economic miracle'. The region's rapid development over the last few decades has been inherently energy-intensive and the impact on global energy security, climate change and the twenty-first-century global system generally is now very significant and will become more so over foreseeable years and decades to come. The region is already the world's largest energy consumer and greenhouse gas emitter, so establishing cleaner energy systems in East Asia is both a regional and global challenge, and renewable energy has a critically important part to play in meeting it. This book presents a comprehensive study of renewable energy development in East Asia. It begins by examining renewable energy development in global and historic contexts, and situates East Asia's position in the recent worldwide expansion of renewables. This same approach is applied on sector-specific chapter studies on wind, solar, hydropower, geothermal, ocean (wave and tidal) and bioenergy, and to general trends in renewable energy policy. Governments play a critical role in promoting renewables and their contribution to tackling climate change and other environmental challenges. Christopher M. Dent argues this is particularly relevant to East Asia, where state capacity practice has been increasingly allied to ecological modernisation thinking to form what he calls 'new developmentalism', the principal foundation on which renewables have developed in the region as well as how East Asia's low carbon development is being generally promoted. Renewable Energy in East Asia will be of huge interest to students and scholars of Asian studies, economics, political economy, energy studies, business, development, international relations and environmental studies. It will also appeal to researchers working on the subject matter in government, business, international organisations, think tanks and civil society organisations.

Matray, 2000-11-30 Out of the ashes of its defeat in World War II, Japan arose to become the foremost economic power in the East Asia and a major player on the world economic stage. How did it do this? This work provides a concise summary and analysis of Japan's emergence as a global economic power. This guide discusses the growth of Japan as an unconventional global power based on the strength of its economy and the softening of its economy in the 1990s. Six topical essays are supported by a timeline of events in postwar Japan, biographical profiles of key players, the text of important primary documents, a glossary of terms, and an annotated bibliography. Topical essays cover the reprise of the Rising Sun, Japan as a Cold War client, the evolution of Japan as an economic giant, contending with the Communists, pursuing partners in Asia, and Japan as a reactive global power. Biographical sketches of 15 key Japanese political and business leaders, the text of 15 primary documents, a timeline of events, a glossary of terms, and an annotated bibliography suitable for student research provide valuable reference material. Students will benefit from this cogent and readable examination of one of the key developments in the postwar world.
