Understanding DLSS and Ray Reconstruction in Cyberpunk 2077

DLSS, or Deep Learning Super Sampling, is NVIDIA's proprietary AI-based technology designed to boost in-game performance by rendering at lower resolutions and then upscaling images using deep learning algorithms. In Cyberpunk 2077, DLSS helps achieve higher frame rates while maintaining visual quality, which is particularly beneficial in a graphically demanding open-world environment.

Ray Reconstruction, often paired with DLSS, is a technique used to improve ray-traced reflections and lighting by reconstructing rays for more accurate and efficient rendering. This feature enhances realism by simulating how light interacts with surfaces, contributing to immersive graphics.

When the DLSS and ray reconstruction options appear greyed out in Cyberpunk 2077, it indicates these technologies cannot be activated due to various factors related to hardware compatibility, software settings, or driver issues. Understanding these technologies' roles is vital for diagnosing and resolving such problems.

Common Causes for Cyberpunk DLSS Ray Reconstruction Greyed Out

Several reasons can cause the DLSS and ray reconstruction settings to be disabled or greyed out in Cyberpunk 2077. Identifying the root cause is the first step toward enabling these features.

Unsupported Graphics Card

DLSS and ray tracing technologies require NVIDIA RTX series graphics cards. Older GPUs or non-RTX cards do not support these features, leading to greyed-out settings.

Outdated Graphics Drivers

Using outdated or incompatible NVIDIA drivers can prevent DLSS and ray reconstruction from becoming available. Keeping drivers updated is essential for feature compatibility.

Incorrect Game Settings or Configuration

Sometimes, specific graphics presets or custom settings within Cyberpunk 2077 may conflict with enabling DLSS or ray reconstruction, causing the options to remain inaccessible.

Operating System Limitations

Running Cyberpunk 2077 on an unsupported or outdated operating system version can restrict access to advanced graphical features.

Hardware Performance Limitations

In cases where the system hardware does not meet minimum performance thresholds, the game might disable DLSS and ray reconstruction automatically to maintain stability.

Hardware and Software Requirements

To enable DLSS and ray reconstruction in Cyberpunk 2077, certain hardware and software conditions must be met. These requirements ensure compatibility and optimal performance.

Compatible Graphics Cards

DLSS and ray reconstruction require NVIDIA RTX GPUs, starting from the RTX 20-series and newer. Supported models include:

- RTX 2060, 2070, 2080, and their Super variants
- RTX 30-series including 3060, 3070, 3080, and 3090

- RTX 40-series GPUs

Updated NVIDIA Drivers

Latest NVIDIA Game Ready drivers should be installed. These drivers provide necessary support for DLSS and ray tracing features and often include optimizations specific to Cyberpunk 2077.

Operating System

Windows 10 (64-bit) or newer is recommended for fully supporting DX12, ray tracing, and DLSS technologies.

DirectX 12 Support

Cyberpunk 2077's advanced graphical features rely on DirectX 12 Ultimate. The system must support this API for DLSS and ray reconstruction to be available.

Troubleshooting Steps to Enable DLSS and Ray Reconstruction

When Cyberpunk DLSS ray reconstruction greyed out issues arise, several troubleshooting steps can help activate these features.

Verify GPU Compatibility

Ensure the installed graphics card is an NVIDIA RTX model capable of supporting DLSS and ray tracing. Check GPU model specifications if unsure.

Update Graphics Drivers

Download and install the latest NVIDIA drivers from the official NVIDIA website. A clean installation is recommended to avoid conflicts.

Enable Ray Tracing in Game Settings

Ray reconstruction depends on ray tracing being enabled. Navigate to Cyberpunk 2077's graphics settings and turn on ray tracing first; this may unlock the DLSS and ray reconstruction options.

Check Graphics API Settings

Make sure the game is running on DirectX 12 mode, as DLSS and ray tracing require this API rather than DirectX 11.

Adjust Resolution and Graphics Presets

Sometimes lowering the overall graphics preset or adjusting resolution settings can enable DLSS. Avoid presets that disable ray tracing or advanced features.

Update Operating System

Keep Windows updated to the latest version to ensure full support for DirectX 12 Ultimate and related technologies.

Reinstall or Verify Game Files

Corrupted game files might cause settings issues. Verifying integrity or reinstalling Cyberpunk 2077 through the game launcher can resolve such problems.

Disable Conflicting Software

Background applications or overlays might interfere with graphical features. Temporarily disable such software to test if DLSS and ray reconstruction become accessible.

Best Practices for Maintaining Optimal Game Performance

Once DLSS and ray reconstruction are enabled, maintaining optimal game performance requires attention to system health and settings management.

- **Regular Driver Updates:** Continuously update GPU drivers to benefit from performance improvements and bug fixes.
- **System Cooling:** Ensure adequate cooling to prevent thermal throttling that can impact stability during ray tracing.
- **Game Updates:** Keep Cyberpunk 2077 updated to access patches that improve DLSS and ray tracing support.
- **Optimized Settings:** Balance graphics quality and performance by adjusting DLSS modes (Quality, Balanced, Performance) according to hardware capability.
- **Monitor System Resources:** Use system monitoring tools to manage CPU, GPU, and memory usage while gaming.
- **Backup Configurations:** Save preferred graphics settings to quickly restore in case of resets or updates.

Frequently Asked Questions

Why is the DLSS Ray Reconstruction option greyed out in Cyberpunk 2077?

The DLSS Ray Reconstruction option may be greyed out because your GPU does not support this feature, or you are not running the latest version of Cyberpunk 2077 or your graphics drivers. Ensure you have an NVIDIA RTX 40-series GPU and updated drivers to enable this option.

How can I enable DLSS Ray Reconstruction in Cyberpunk 2077 if it is greyed out?

To enable DLSS Ray Reconstruction, make sure you have an NVIDIA RTX 40-series graphics card, update your GPU drivers to the latest version, and update Cyberpunk 2077 to the latest patch. Additionally, DLSS Ray Reconstruction requires ray tracing to be enabled, so ensure ray tracing settings are turned on in the game.

Does my GPU need to be a specific model for DLSS Ray Reconstruction to work in Cyberpunk 2077?

Yes, DLSS Ray Reconstruction is only supported on NVIDIA RTX 40-series GPUs, like the RTX 4070, 4080, or 4090. Older RTX 20-series or 30-series cards do not support this feature, which causes the option to be greyed out in the game settings.

Can outdated game or driver versions cause DLSS Ray Reconstruction to be greyed out in Cyberpunk 2077?

Yes, outdated game versions or graphics drivers can cause the DLSS Ray Reconstruction option to remain greyed out. Updating Cyberpunk 2077 to the latest patch and installing the newest NVIDIA drivers often resolves this issue and unlocks the feature if your hardware supports it.

Is DLSS Ray Reconstruction dependent on enabling ray tracing in Cyberpunk 2077?

Yes, DLSS Ray Reconstruction is a feature designed to work alongside ray tracing, so ray tracing must be enabled in the game's graphics settings for DLSS Ray Reconstruction to be available. If ray tracing is off, the DLSS Ray Reconstruction option will be greyed out.
