

daewoo shipbuilding & marine engineering

daewoo shipbuilding & marine engineering stands as one of the global leaders in the shipbuilding industry, known for its cutting-edge technology, vast production capacity, and comprehensive marine engineering services. This South Korean giant has contributed significantly to the advancement of maritime technology, specializing in the construction of various types of vessels including container ships, LNG carriers, and offshore platforms. The company's commitment to innovation and quality has made it a preferred choice among international clients. This article delves into the history, core business areas, technological innovations, and future prospects of Daewoo Shipbuilding & Marine Engineering. Additionally, insights into its environmental initiatives and global market presence will be explored. The following sections provide a detailed overview of the company's operations and strategic importance in the maritime sector.

- History and Background
- Core Business Segments
- Technological Innovations
- Global Market Presence
- Environmental and Sustainability Initiatives
- Future Outlook and Challenges

History and Background

Daewoo Shipbuilding & Marine Engineering (DSME) was established in 1973 as part of the Daewoo Group conglomerate. Over the decades, DSME evolved into a cornerstone of South Korea's shipbuilding industry, gaining a reputation for manufacturing high-quality vessels and marine equipment. The company initially focused on small and medium-sized shipbuilding projects but quickly expanded its capabilities to include large-scale commercial and offshore vessels. Through strategic investments and technological upgrades, DSME emerged as one of the world's largest shipbuilders, competing closely with other South Korean giants such as Hyundai Heavy Industries and Samsung Heavy Industries.

Milestones in Development

Throughout its history, Daewoo Shipbuilding & Marine Engineering has achieved numerous milestones. These include the launch of its first VLCC (Very Large Crude Carrier) in the 1980s and the development of advanced LNG carriers in the 2000s. The company also diversified into offshore engineering, constructing floating production storage and offloading units (FPSOs) and other complex offshore structures. These milestones reflect DSME's capability to innovate and adapt to changing market demands in the global shipbuilding industry.

Core Business Segments

Daewoo Shipbuilding & Marine Engineering operates through several core business segments that collectively define its market strength. These segments include shipbuilding, offshore engineering, and marine engineering services. Each segment is supported by extensive research and development efforts and a skilled workforce dedicated to maintaining DSME's competitive edge.

Shipbuilding

The shipbuilding segment remains the backbone of DSME's operations. The company designs and constructs a wide range of vessels including container ships, LNG carriers, bulk carriers, oil tankers, and specialized vessels such as icebreakers and naval ships. DSME's shipyards are equipped with state-of-the-art facilities that enable the production of large, complex ships with high precision and efficiency.

Offshore Engineering

In addition to traditional shipbuilding, DSME is a pioneer in offshore engineering. This segment focuses on the design and construction of offshore platforms, FPSOs, drill ships, and floating liquefied natural gas (FLNG) units. These structures support the exploration and production of offshore oil and gas resources, a critical sector for global energy supply. DSME's expertise in this field is recognized worldwide, and it has delivered numerous high-profile offshore projects.

Marine Engineering Services

The company also provides comprehensive marine engineering services, including ship repair, conversion, and maintenance. These services ensure the longevity and performance of vessels throughout their operational lifespan. DSME's engineering teams leverage advanced diagnostic tools and repair technologies to meet the demanding standards of maritime clients.

Technological Innovations

Innovation is central to the success of Daewoo Shipbuilding & Marine Engineering. The company invests heavily in research and development to enhance vessel performance, safety, and environmental compliance. Through continuous innovation, DSME has introduced groundbreaking technologies that set industry standards.

Advanced Ship Design

DSME employs sophisticated design software and simulation tools that optimize hull forms, improve fuel efficiency, and reduce emissions. The company's naval architects and engineers collaborate closely to develop vessels that meet specific client requirements while adhering to international regulations. This approach has led to the creation of highly efficient LNG carriers and eco-friendly container ships.

Green Ship Technologies

In response to growing environmental concerns, Daewoo Shipbuilding & Marine Engineering has developed green ship technologies aimed at minimizing the environmental impact of maritime operations. These include the adoption of LNG-fueled propulsion systems, exhaust gas cleaning systems (scrubbers), and ballast water treatment technologies. Such innovations contribute to reducing greenhouse gas emissions and protecting marine ecosystems.

Automation and Smart Ship Solutions

DSME is also at the forefront of integrating automation and digital technologies into shipbuilding. The company has pioneered smart ship solutions that enhance navigational safety, optimize operational efficiency, and enable remote monitoring and diagnostics. These advancements align with the broader maritime industry trend toward autonomous and connected vessels.

Global Market Presence

Daewoo Shipbuilding & Marine Engineering operates on a global scale, serving clients across Asia, Europe, the Americas, and the Middle East. Its extensive export network and international partnerships have solidified its position as a preferred supplier of advanced maritime solutions worldwide.

Key International Clients

DSME's clientele includes major shipping companies, oil and gas corporations, and government agencies. These clients rely on DSME's expertise for both newbuilding contracts and offshore project deliveries. The company's ability to meet stringent quality standards and deliver projects on time has earned it a strong reputation in the global marketplace.

Strategic Shipyard Locations

The company's primary shipyards are located in Okpo and Geoje, South Korea. These facilities are among the largest and most advanced in the world, featuring deep-water access and extensive fabrication workshops. DSME continually upgrades its shipyards to accommodate the construction of increasingly large and complex vessels, ensuring its competitiveness in the global shipbuilding arena.

Environmental and Sustainability Initiatives

Daewoo Shipbuilding & Marine Engineering is committed to sustainability and environmental stewardship. Recognizing the maritime industry's environmental challenges, DSME integrates eco-friendly practices in its manufacturing processes and product designs.

Eco-friendly Manufacturing Processes

The company implements energy-efficient practices in its shipyards, including waste reduction, water recycling, and emissions control. These measures help minimize the environmental footprint of its manufacturing activities while promoting resource conservation.

Sustainable Ship Designs

DSME designs vessels that comply with international environmental regulations such as MARPOL and IMO's emissions standards. The company emphasizes the use of alternative fuels, energy-saving devices, and hull modifications to reduce fuel consumption and pollutant emissions.

Corporate Social Responsibility

Beyond environmental concerns, DSME engages in various corporate social responsibility (CSR) initiatives aimed at supporting local communities and enhancing employee welfare. These efforts reflect the company's dedication to sustainable development and ethical business practices.

Future Outlook and Challenges

As the maritime industry faces evolving economic, technological, and environmental pressures, Daewoo Shipbuilding & Marine Engineering is positioned to adapt and thrive. The company's future prospects are shaped by its commitment to innovation, quality, and sustainability.

Emerging Industry Trends

The rise of digitization, autonomous shipping, and alternative energy sources presents both opportunities and challenges for DSME. The company is actively exploring hydrogen fuel cells, battery technology, and artificial intelligence applications to maintain its technological leadership.

Market Competition and Economic Factors

Global competition from emerging shipbuilding nations and fluctuating demand for new vessels require DSME to maintain cost efficiency and operational agility. Navigating trade policies, raw material prices, and geopolitical uncertainties will be critical to sustaining growth.

Strategic Initiatives for Growth

DSME continues to invest in research and development, strategic alliances, and workforce development. By enhancing its product portfolio and expanding into niche markets such as offshore renewable energy platforms, the company aims to secure long-term success in a dynamic industry landscape.

- Investment in cutting-edge technology and R&D
- Expansion into offshore renewable energy sectors
- Focus on eco-friendly and smart ship solutions
- Strengthening global partnerships and client relationships
- Enhancing operational efficiency and cost management

Frequently Asked Questions

What is Daewoo Shipbuilding & Marine Engineering (DSME)?

Daewoo Shipbuilding & Marine Engineering (DSME) is a South Korean company specializing in the construction of ships, offshore platforms, and marine engineering projects. It is one of the largest shipbuilders in the world.

What types of vessels does Daewoo Shipbuilding & Marine Engineering build?

DSME builds a wide range of vessels including container ships, LNG carriers, oil tankers, naval vessels, and specialized offshore platforms such as FPSOs and drillships.

How is DSME contributing to green shipbuilding and sustainability?

DSME is investing in eco-friendly technologies such as LNG-powered ships, hybrid propulsion systems, and energy-efficient designs to reduce emissions and comply with global environmental regulations.

What recent major projects has Daewoo Shipbuilding completed?

Recently, DSME has completed several large-scale projects including LNG carriers for major energy companies and offshore platforms for oil and gas exploration in regions like the Middle East and West Africa.

How does Daewoo Shipbuilding & Marine Engineering rank globally in the shipbuilding industry?

DSME is consistently ranked among the top five shipbuilders globally, recognized for its advanced technology, quality construction, and large production capacity.

What innovations is DSME known for in marine engineering?

DSME is known for innovations such as advanced hull designs, automation in shipbuilding processes, and cutting-edge offshore platform technology including deepwater drilling solutions.

Has Daewoo Shipbuilding & Marine Engineering faced any recent financial challenges?

Like many large shipbuilders, DSME has faced financial pressures due to global market fluctuations, but it has been implementing restructuring plans and seeking new markets to stabilize its business.

Where are Daewoo Shipbuilding & Marine Engineering's main shipyards located?

DSME's main shipyards are located in Okpo and Geoje, South Korea, equipped with state-of-the-art facilities for constructing large and complex vessels and offshore structures.

Additional Resources

1. Daewoo Shipbuilding & Marine Engineering: A Corporate History

This book provides an in-depth look at the rise of Daewoo Shipbuilding & Marine Engineering (DSME) from its inception to becoming one of the world's leading shipbuilders. It covers key milestones, technological advancements, and the company's strategic expansions. Readers gain insight into the challenges and successes faced by DSME in the global maritime industry.

2. Innovations in Shipbuilding: The DSME Approach

Focusing on the technological innovations pioneered by DSME, this book explores how the company has integrated advanced engineering and sustainable practices into ship construction. It highlights DSME's development of eco-friendly vessels and smart ship technologies. The text serves as a valuable resource for engineers and maritime professionals interested in cutting-edge shipbuilding techniques.

3. The Global Impact of Daewoo Shipbuilding & Marine Engineering

This volume analyzes DSME's influence on the global shipbuilding market and the marine engineering sector. It examines the company's international collaborations, export strategies, and contributions to maritime infrastructure worldwide. The book also discusses economic and geopolitical factors shaping DSME's operations.

4. Marine Engineering Excellence: Case Studies from DSME

Through detailed case studies, this book showcases DSME's engineering projects that have set new industry standards. It covers various ship types including LNG carriers, offshore platforms, and container ships. The book is designed for marine engineers seeking practical examples of problem-solving and innovation.

5. Daewoo Shipbuilding & Marine Engineering and Sustainable Shipping

Highlighting DSME's commitment to environmental responsibility, this book delves into the company's efforts to reduce emissions and improve fuel efficiency in ship design. It discusses regulatory compliance, green technologies, and DSME's role in promoting sustainable maritime transport. This is

essential reading for sustainability advocates in the marine sector.

6. Project Management in Large-Scale Shipbuilding: Lessons from DSME

This book examines the complex project management practices used by DSME to deliver large-scale shipbuilding projects on time and within budget. It outlines methodologies, risk management strategies, and leadership approaches employed by the company. Project managers and industry professionals will find valuable insights applicable to large engineering endeavors.

7. Offshore Engineering Innovations at Daewoo Shipbuilding & Marine Engineering

Dedicated to offshore structures and marine engineering, this book explores DSME's pioneering work in offshore oil rigs, floating platforms, and subsea systems. It details engineering challenges and solutions that have advanced offshore construction technology. Readers interested in offshore engineering will gain a comprehensive understanding of DSME's contributions.

8. Daewoo Shipbuilding & Marine Engineering in the Age of Digitalization

This book investigates how DSME is leveraging digital technologies such as AI, IoT, and big data analytics to transform shipbuilding processes and marine engineering. It discusses digital twins, automation, and smart manufacturing practices implemented by the company. The book is aimed at professionals embracing digital transformation in maritime industries.

9. Economic and Strategic Perspectives on Daewoo Shipbuilding & Marine Engineering

Focusing on the economic and strategic dimensions, this book analyzes DSME's role within South Korea's industrial landscape and global maritime economy. It covers government policies, competitive dynamics, and future prospects. Economists, policymakers, and industry analysts will find this book a comprehensive guide to understanding DSME's strategic position.

daewoo shipbuilding marine engineering: Shipbuilding and Ship Repair Workers around the

World Raquel Varela, Hugh Murphy, Marcel Linden, 2025-10-01 Maritime trade is the backbone of the world's economy. Around ninety percent of all goods are transported by ship, and since World War II, shipbuilding has undergone major changes in response to new commercial pressures and opportunities. Early British dominance, for example, was later undermined in the 1950s by competition from the Japanese, who have since been overtaken by South Korea and, most recently, China. The case studies in this volume trace these and other important developments in the shipbuilding and ship repair industries, as well as workers' responses to these historic transformations.

daewoo shipbuilding marine engineering: *National Security Assessment of the U.S. Shipbuilding and Repair Industry*, 2001

daewoo shipbuilding marine engineering: *Guinness World Records 2015* Craig Glenday, 2015-03-10 Celebrate sixty years of jaw-dropping records. From the oldest person who ever lived (at 122) to the first music video filmed in space, from the tallest self-built castle to the fastest blindfolded text message—the most amazing feats from around the world can be found in this special diamond anniversary edition. Guinness World Records 2015 presents the most astonishing and exciting record breakers ever. Filled with don't-try-this-at-home human exploits, natural and technological wonders, incredible achievements in sports and entertainment, and much more, this fully updated edition introduces thrilling new records and extraordinary facts that will fascinate young and old alike. Did you know that . . . • On December 8, 2013, Metallica became the first music act to have performed on all seven continents when they played their "Freeze 'Em All" show for a crowd of 120 at Antarctica's Carlini Station? • Researchers at the Joint Institute for Laboratory Astrophysics have created the most accurate clock ever, which will keep time to the second for 4.5 billion years? • The New Jersey Zombie Walk of Asbury Park recaptured its title—from the Zombie Pub Crawl of Minneapolis—as the biggest undead get-together, with a mind-blowing 9,592 participants? And that's just a taste of what you'll find inside this absorbing book. The world has changed a lot in the last sixty years—for proof, check out the biggest crowdfunding successes or the largest gathering of people twerking. One thing remains the same: Nobody does records like Guinness World Records.

daewoo shipbuilding marine engineering: MIMA Maritime Affairs Journal (Volume 1 2023) Jason Chuah, Mohd Yazid Zul Kepli, Ganesan Vethiah, Syuhaida Ismail, Muhammad Zulhilmi Mohd Nizam, Edy Mustaqim Muhamad, Muhammad Khalid Ahmad Kamal, Wahab Jumrah, 2023-09-20 The MIMA Maritime Affairs Journal is a solid platform for maritime professionals and the academia to discuss matters of the sea. It has a digital format that allows a bigger reach, and it is registered at the Malaysian National Library with the ISSN 3009-0830 and e-ISSN 3009-0822. The publication aims to disseminate information about the various maritime spheres, such as conventions and laws, the marine environment, security and safety at sea, maritime economics and industries, and anything ocean related. MIMA Maritime Affairs Journal (Volume 1 2023) 1- We Need to Talk About Maritime Legal Education! (Jason Chuah) 2- Revisiting Maritime Education in Malaysia (Mohd Yazid Zul Kepli & Ganesan Vethiah) 3- Maritime Education and Training (MET): Exploration on the Issues and Challenges in the Malaysian Education System (Syuhaida Ismail, Muhammad Zulhilmi Mohd Nizam, Edy Mustaqim Muhamad & Muhammad Khalid Ahmad Kamal) 4- Upskilling the Shipbuilding and Ship Repair Industry Towards Enhancing Malaysia's Competitiveness (Nazery Khalid) 5- Considering Submarine Cable Projects as a Subject of Maritime Education in Malaysia (Wahab Jumrah)

daewoo shipbuilding marine engineering: Arctic Fever Anastasia Likhacheva, 2022-08-22 This book explores the Arctic as a rapidly evolving phenomenon in international affairs of a rising number of stakeholders. For decades, Arctic studies used to be an affair of a relatively narrow group of experts from northern countries. This time is over due to a new Chinese Arctic policy, as well as growing regional interests from South Korea, Singapore, India and Japan. Contributors reflect on new roles for the Arctic region: both as a playground for the old school nation state competition and even confrontation, and a new source for international cooperation in energy, logistics and natural

sciences. Climate change, political tensions and economic competition make Arctic a hotter venue of international relations. This new Arctic fever, studied through a comparative analysis of different regional agendas, especially with a focus on the US-China-Russia triangle, represents the main subject of our book, which will be of interest to scholars of geopolitics, of climate change, and of 21st century energy economics.

daewoo shipbuilding marine engineering: *Practical Design of Ships and Other Floating Structures* You-Sheng Wu, Guo-Jun Zhou, Wei-Cheng Cui, 2001-08-22 This proceedings contains the papers presented at The 8th International Symposium on Practical Design of Ships and Other Floating Structures held in China in September 2001 - the first PRADS of the 21st Century. The overall aim of PRADS symposia is to advance the design of ships and other floating structures as a professional discipline and science by exchanging knowledge and promoting discussion of relevant topics in the fields of naval architecture and marine and offshore engineering. In line with the aim, in welcoming the new era, this Symposium is intended to increase international co-operation and give a momentum for the new development of design and production technology of ships and other floating structures for efficiency, economy, safety, and environmental production. The main themes of this Symposium are Design Synthesis, Production, Hydrodynamics, Structures and Materials of Ships and Floating Systems. Proposals for over 270 papers from 26 countries and regions within the themes were received for PRADS 2001, and about 170 papers were accepted for presentation at the symposium. With the high quality of the proposed papers the Local Organising Committee had a difficult task to make a balanced selection and to control the total number of papers for fitting into the allocated time schedule approved by the Standing Committee of PRADS. Volume I covers design synthesis, production and part of hydrodynamics. Volume II contains the rest of hydrodynamics, and structures and materials.

daewoo shipbuilding marine engineering: *Merchant Ship Types* Alexander Arnfinn Olsen, 2023-01-24 Merchant Ship Types provides a broad and detailed introduction to the classifications and main categories of merchant vessels for students and cadets. It introduces the concept of ship classification by usage, cargo type, and size, and shows how the various size categories affect which ports and channels the types of vessels are permitted to enter. Detailed outlines of each major vessel category are provided, including: • Feeder ship; • General cargo vessels; • Container ships; • Tankers; • Dry bulk carriers; • Multi-purpose vessels; • Reefer ships; • Roll-on/roll-off vessels. The book also explains where these are permitted to operate, the type of cargoes carried, and specific safety or risk factors associated with the vessel class, as well as their main characteristics. Relevant case studies are presented. The textbook is ideal for merchant navy cadets at HNC, HND, and foundation degree level in both the deck and engineering branches, and serves as a general reference for insurance, law, logistics, offshore, and fisheries.

daewoo shipbuilding marine engineering: *International Construction Contract Law* Lukas Klee, 2018-07-17 The updated second edition of the practical guide to international construction contract law The revised second edition of International Construction Contract Law is a comprehensive book that offers an understanding of the legal and managerial aspects of large international construction projects. This practical resource presents an introduction to the global construction industry, reviews the basics of construction projects and examines the common risks inherent in construction projects. The author — an expert in international construction contracts — puts the focus on FIDIC standard forms and describes their use within various legal systems. This important text contains also a comparison of other common standard forms such as NEC, AIA and VOB, and explains how they are used in a global context. The revised edition of International Construction Contract Law offers additional vignettes on current subjects written by international panel of numerous contributors. Designed to be an accessible resource, the book includes a basic dictionary of construction contract terminology, many sample letters for Claim Management and a wealth of examples and case studies that offer helpful aids for construction practitioners. The second edition of the text includes: • Updated material in terms of new FIDIC and NEC Forms published in 2017 • Many additional vignettes that clearly exemplify the concepts presented within the text •

Information that is appropriate for a global market, rather than oriented to any particular legal system • The essential tools that were highlighted the first edition such as sample letters, dictionary and more • A practical approach to the principles of International Construction Contract Law and construction contract management. Does not get bogged down with detailed legal jargon Written for consulting engineers, lawyers, clients, developers, contractors and construction managers worldwide, the second edition of International Construction Contract Law offers an essential guide to the legal and managerial aspects of large international construction projects.

daewoo shipbuilding marine engineering: EU Shipbuilding Industry Law and Regulations Handbook Volume 2 Strategic Information and Regulations IBP USA, 2013-08 2011 Updated Reprint. Updated Annually. EU Shipbuilding Industry Law and Regulations Handbook

daewoo shipbuilding marine engineering: Hydraulics in Civil and Environmental Engineering, Fifth Edition Andrew Chadwick, John Morfett, Martin Borthwick, 2013-03-18 Now in its fifth edition, Hydraulics in Civil and Environmental Engineering combines thorough coverage of the basic principles of civil engineering hydraulics with wide-ranging treatment of practical, real-world applications. This classic text is carefully structured into two parts to address principles before moving on to more advanced topics. The first part focuses on fundamentals, including hydrostatics, hydrodynamics, pipe and open channel flow, wave theory, physical modeling, hydrology, and sediment transport. The second part illustrates the engineering applications of these fundamental principles to pipeline system design; hydraulic structures; and river, canal, and coastal engineering—including up-to-date environmental implications. A chapter on computational hydraulics demonstrates the application of computational simulation techniques to modern design in a variety of contexts. What's New in This Edition Substantive revisions of the chapters on hydraulic machines, flood hydrology, and computational modeling New material added to the chapters on hydrostatics, principles of fluid flow, behavior of real fluids, open channel flow, pressure surge in pipelines, wave theory, sediment transport, river engineering, and coastal engineering The latest recommendations on climate change predictions, impacts, and adaptation measures Updated references Hydraulics in Civil and Environmental Engineering, Fifth Edition is an essential resource for students and practitioners of civil, environmental, and public health engineering and associated disciplines. It is comprehensive, fully illustrated, and contains many worked examples. Spreadsheets and useful links to other web pages are available on an accompanying website, and a solutions manual is available to lecturers.

daewoo shipbuilding marine engineering: Naval Engineering in the 21st Century: The Science and Technology Foundation for Future Naval Fleets National Research Council (U.S.). Committee on Naval Engineering in the 21st Century, 2011-09-02 TRB Special Report 306: Naval Engineering in the 21st Century: The Science and Technology Foundation for Future Naval Fleets examines the state of basic and applied research in the scientific fields that support naval engineering and explores whether Office of Naval Research (ONR) activities, under its National Naval Responsibility for Naval Engineering (NNR-NE) initiative, have been effective in sustaining these fields.

daewoo shipbuilding marine engineering: Global Shipbuilding Trends Bridget Langston, AI, 2025-03-12 Global Shipbuilding Trends examines the shipbuilding industry as a barometer of economic power, technological advancement, and geopolitical influence. The book analyzes how shifts in shipbuilding dominance, particularly the rise of China, reflect broader changes in the global order. A key insight is the understanding of how a nation's ability to construct sophisticated vessels demonstrates its industrial capacity and strategic ambitions. For example, the historical shift from British to American shipbuilding demonstrated a transfer of economic and military might. The book explores the interplay of government policies, technological innovation, and labor costs that have fueled these transformations. It contrasts the growth in Asia with the decline in the West, examining the implications for economic competitiveness and national security. The approach is holistic, connecting economics, political science, and international relations. It progresses from historical context to current landscapes, concluding with future trends like automation and sustainable

shipbuilding.

daewoo shipbuilding marine engineering: Creating Global Opportunities Chris Jephson, Henning Morgen, 2014-05-08 Well-researched, first inside account of Maersk Line's progression to world's leading container operator, put within the context of globalisation.

daewoo shipbuilding marine engineering: *Curious Video Game Machines* Lewis Packwood, 2025-08-05 The story of video games is often told as the successive rise of computers and consoles from famous names like Atari, Commodore, Nintendo, Sega, Sony and Microsoft. But beyond this familiar tale, there's a whole world of weird and wonderful gaming machines that seldom get talked about. *Curious Video Game Machines* reveals the fascinating stories behind a bevy of rare and unusual consoles, computers and coin-ops – like Kimtanktics, a 1970s wargame computer made out of calculator parts, or the suite of Korea-exclusive consoles made by car manufacturer Daewoo. Then there's the Casio Loopy, a 1990s console that doubled up as a sticker printer, the RDI Halcyon, a 1985 LaserDisc-based machine that could recognize your voice, and the Interton VC 4000, a German console made by a hearing-aid company, as well as a range of bizarre arcade machines, from early attempts at virtual reality to pedal-powered flying contraptions. There are tales of missed opportunities, like the astonishingly powerful Enterprise 64 computer, which got caught in development hell and arrived too late to make an impact on the British microcomputer market. And there are tales of little-known triumphs, like the Galaksija DIY computer kit that introduced a whole generation of Yugoslavians to computing before the country became engulfed by war. Featuring exclusive interviews with creators, developers and collectors, *Curious Video Game Machines* finally shines a light on the forgotten corners of video-game history.

daewoo shipbuilding marine engineering: Maritime Informatics Mikael Lind, Michalis Michaelides, Robert Ward, Richard T. Watson, 2020-11-14 This first book on Maritime Informatics describes the potential for Maritime Informatics to enhance the shipping industry. It examines how decision making in the industry can be improved by digital technology, and introduces the technology required to make Maritime Informatics a distinct and valuable discipline. Based on participating in EU funded research over the last six years to improve the shipping industry, the editors stipulate that there is a need for the new discipline of Maritime Informatics, which studies the application of information systems to increasing the efficiency, safety, and ecological sustainability of the world's shipping industry. This book examines competition and collaboration between shipping companies, and also companies who serve shipping needs, such as ports and terminals. Practical examples from leading experts give the reader real world examples for better understanding.
