d r s construction: The Processing of Events Oliver Bott, 2010 Synthesizing ideas from event semantics and psycholinguistics, this monograph provides a new perspective on the processing of linguistic aspect and aspectual coercion. Confronting alternative semantic accounts with experimental evidence, the author develops a comprehensive model of online aspectual interpretation. The first part of the book critically reviews competing theoretical accounts of aspectual coercion. As an analytical tool the author introduces a computational model based on the event calculus by Hamm & van Lambalgen (2005) which makes use of planning formalisms from artificial intelligence. Detailed predictions from this framework are then tested in the experimental work reported in the second part. The focus here is on such questions as: Is aspectual coercion a uniform phenomenon or must we distinguish different types? Is aspect processed incrementally or is it computed only at the clause boundary? And finally, what insights can event related potentials yield about how the brain resolves local aspectual mismatch?

d r s construction: Reference to Abstract Objects in Discourse Nicholas Asher, 2012-12-06 Reference to Abstract Objects in Discourse presents a novel framework and analysis of the ways we refer to abstract objects in natural language discourse. The book begins with a typology of abstract objects and related entities like eventualities. After an introduction to 'bottom up, compositional' discourse representation theory (DRT) and to previous work on abstract objects in DRT (notably work on the semantics of the attitudes), the book turns to a semantic analysis of eventuality and abstract object denoting nominals in English. The book then substantially revises and extends the dynamic semantic framework of DRT to develop an analysis of anaphoric reference to abstract objects and eventualities that exploits discourse structure and the discourse relations that obtain between elements of the structure. A dynamic, semantically based theory of discourse structure (SDRT) is proposed, along with many illustrative examples. Two further chapters then provide the analysis of anaphoric reference to propositions VP ellipsis. The abstract entity anaphoric antecedents are elements of the discourse structures that SDRT develops. The final chapter discusses some logical and philosophical difficulties for a semantic analysis of reference to abstract objects. For semanticists, philosophers of language, computer scientists interested in natural language applications and discourse, philosophical logicians, graduate students in linguistics, philosophy, cognitive science and artificial intelligence.

d r s construction: Handbook of Pragmatics Jef Verschueren, Jan-Ola Östman, 2022-08-15 The Manual section of the Handbook of Pragmatics, produced under the auspices of the

International Pragmatics Association (IPrA), is a collection of articles describing traditions, methods, and notational systems relevant to the field of linguistic pragmatics; the main body of the Handbook contains all topical articles. The first edition of the Manual was published in 1995. This second edition includes a large number of new traditions and methods articles from the 24 annual installments of the Handbook that have been published so far. It also includes revised versions of some of the entries in the first edition. In addition, a cumulative index provides cross-references to related topical entries in the annual installments of the Handbook and the Handbook of Pragmatics Online (at <https://benjamins.com/online/hop/>), which continues to be updated and expanded. This second edition of the Manual is intended to facilitate access to the most comprehensive resource available today for any scholar interested in pragmatics as defined by the International Pragmatics Association: "the science of language use, in its widest interdisciplinary sense as a functional (i.e. cognitive, social, and cultural) perspective on language and communication."

d r s construction: Switch-Reference and Discourse Representation Lesley Stirling, 1993-03-11 This book argues that types of anaphoric linkage across clause boundaries cannot be adequately accounted for by Binding Theory, proposing instead an account for them which is formalised in Discourse Representation Theory.

d r s construction: From Discourse to Logic Hans Kamp, U. Reyle, 2013-03-14 Preface This book is about semantics and logic. More specifically, it is about the semantics and logic of natural language; and, even more specifically than that, it is about a particular way of dealing with those subjects, known as Discourse Representation Theory, or DRT. DRT is an approach towards natural language semantics which, some thirteen years ago, arose out of attempts to deal with two distinct problems. The first of those was the semantic puzzle that had been brought to contemporary attention by Geach's notorious donkey sentences - sentences like If Pedro owns some donkey, he beats it, in which the anaphoric connection we perceive between the indefinite noun phrase some donkey and the pronoun it may seem to conflict with the existential meaning of the word some. The second problem had to do with tense and aspect. Some languages, for instance French and the other Romance languages, have two morphologically distinct past tenses, a simple past (the French *Passé Simple*) and a continuous past (the French *Imparfait*). To articulate precisely what the difference between these tenses is has turned out to be surprisingly difficult.

d r s construction: Compound Comprehension in Isolation and in Context Ralf Meyer, 2010-11-22 Over the past few decades, the book series *Linguistische Arbeiten* [Linguistic Studies], comprising over 500 volumes, has made a significant contribution to the development of linguistic theory both in Germany and internationally. The series will continue to deliver new impulses for research and maintain the central insight of linguistics that progress can only be made in acquiring new knowledge about human languages both synchronically and diachronically by closely combining empirical and theoretical analyses. To this end, we invite submission of high-quality linguistic studies from all the central areas of general linguistics and the linguistics of individual languages which address topical questions, discuss new data and advance the development of linguistic theory.

d r s construction: Semantics - Theories Claudia Maienborn, Klaus Heusinger, Paul Portner, 2019-02-19 Now in paperback for the first time since its original publication, the material gathered here is perfect for anyone who needs a detailed and accessible introduction to the important semantic theories. Designed for a wide audience, it will be of great value to linguists, cognitive scientists, philosophers, and computer scientists working on natural language. The book covers

theories of lexical semantics, cognitively oriented approaches to semantics, compositional theories of sentence semantics, and discourse semantics. This clear, elegant explanation of the key theories in semantics research is essential reading for anyone working in the area.

d r s construction: Meaning and the Dynamics of Interpretation Hans Kamp, 2013-10-17 This selection of research papers written by Hans Kamp presents the core of his scientific research on natural language semantics and its relation to logic, philosophy and linguistics. Arranged in six sections, the topics range from philosophical reflection on the foundational issues in the ancient Sorites Paradox with a formal account of its solution, to a detailed account of presuppositions in dynamic semantics. Ranking among the philosophers with great and lasting influence on formal semantics, Hans Kamp contributed early foundational research to core theoretical topics like temporal reference and vagueness, then pushed the boundaries of the discipline in new and productive directions. Showing the importance of non-truth-functional aspects of meaning, Discourse Representation Theory proved the value of a dynamic approach to interaction of text and context for our understanding of anaphora, word meaning and context-dependence. This collection shows very clearly how Kamp has forged ground-breaking connections among semantics, computation, and mental representation, challenging the once dominant Fregean anti-psychologism, while demonstrating that the best theoretical research can simultaneously yield important computational applications and novel cognitive insights. Barbara Partee, University of Massachusetts Amherst. Hans Kamp has been rewarded with the Rolf Schock Prize in 2024.

d r s construction: Natural Language at the Computer Albrecht Blaser, 1988 Volume 19 of Group III (Crystal and Solid State Physics) deals with the magnetic properties of metals, alloys and metallic compounds. The amount of information available in this field is so substantial that several subvolumes are needed to cover it all. The first subvolumes treat the intrinsic magnetic properties, i. e. those magnetic properties which depend only on the chemical composition and the crystal structure. So far, subvolumes III/19a, III/19b and III/19c have appeared. Data on the properties that depend on the preparation of the samples measured, as for instance, thin films or amorphous alloys and the magnetic alloys used in technical applications, are being compiled in the last subvolumes of III/19. In the first of these, subvolume III/19g, magnetic properties are given for several major types of crystalline and amorphous thin magnetic films that are supported by a substrate and for which a more or less coherent group of data is available. The properties of sputtered metallic amorphous films containing 3d transition elements will be dealt with in the following subvolume.

d r s construction: Logic, Language, and Meaning, Volume 1 L. T. F. Gamut, 1991 Although the two volumes of Logic, Language, and Meaning can be used independently of one another, together they provide a comprehensive overview of modern logic as it is used as a tool in the analysis of natural language. Both volumes provide exercises and their solutions. Volume 1, Introduction to Logic, begins with a historical overview and then offers a thorough introduction to standard propositional and first-order predicate logic. It provides both a syntactic and a semantic approach to inference and validity, and discusses their relationship. Although language and meaning receive special attention, this introduction is also accessible to those with a more general interest in logic. In addition, the volume contains a survey of such topics as definite descriptions, restricted quantification, second-order logic, and many-valued logic. The pragmatic approach to non-truthconditional and conventional implicatures are also discussed. Finally, the relation between logic and formal syntax is treated, and the notions of rewrite rule, automation, grammatical complexity, and language hierarchy are explained.

Akama, 2012-12-06 The editors of the Applied Logic Series are happy to present to the reader the fifth volume in the series, a collection of papers on Logic, Language and Computation. One very striking feature of the application of logic to language and to computation is that it requires the combination, the integration and the use of many diverse systems and methodologies - all in the same single application. The papers in this volume

will give the reader a glimpse into the problems of this active frontier of logic. The Editors

drs construction: Text, Time, and Context Richard P. Meier, Helen Aristar-Dry, Emilie Destruel, 2009-10-20

Carlota S. Smith was a key figure in linguistic research and a pioneering woman in generative linguistics. This selection of papers focuses on the research into tense, aspect, and discourse that Smith completed while Professor of Linguistics at the University of Texas at Austin. Smith's early work in English syntax is still cited today, and her early career also yielded key research on language acquisition by young children. Starting in the mid-1970s, after her move to UT, she embarked on her most important line of research. In numerous papers - the first of which was published in 1975 - and in a very important 1991 book (*The Parameter of Aspect*), Smith analyzed how languages encode time and how they encode the ways events and situations occur over time. Smith's work on the expression of time in language is notable because of its careful analyses of a number of quite different languages, including not only English and French, but also Russian, Mandarin, and Navajo. Inspired by a year in France in the early 1970s, Smith began to analyze the differing ways in which languages encode time and how they encode the ways events and situations occur over time. In doing so, she developed her signature 'two-component' theory of aspect. This model of temporal aspect provided an excellent framework for graduate students seeking to analyze the temporal systems of an array of languages, including under-described languages that are so much the focus of research in UT's Linguistics Department. Selected by Carlota Smith herself and by her longtime friends and colleagues, this book contains her 1980 piece on temporal structures in discourse, her 1986 comparison of the English and French aspectual systems, a 1996 paper on the aspect system in Navajo (an increasingly-endangered language which Smith worked to preserve), and her 1980 and 1993 papers on the child's acquisition of tense and aspect. Smith, who died in 2007, was a trailblazer in her field whose broad interests fed into her scholarly research. She was an avid reader who sought to bring the analytic tools of linguistics to the humanistic study of literature, by examining the syntactic and pragmatic principles which underlie literary effects. Her research on rhetorical and temporal effects in context was integrated into her last book, *Modes of Discourse* (2003). The current volume of articles covers much of her most fruitful work on the way in which language is used to express time, and will be essential reading for many working and studying in linguistics generally and in semantics particularly.

drs construction: A Comprehensive Reference Dictionary of Linguistics, A-D Huseynaga Rzaev, 2019-09-10

This exhaustive linguistic dictionary has been designed both for classroom use and for English language professionals. It provides a unique and effective learning source which 'mirrors' the continual spring of linguistic knowledge. It suggests a comprehensive, insightful analysis of the highly controversial and complicated issues of present day linguistics. This dictionary provides a pedagogical tool for those teaching various aspects of language to both upper level undergraduates and graduate level researchers, and exploits the benefits of Turkish, Azerbaijani and Russian language scholarship in this field.

drs construction: Logic: A History of its Central Concepts Dov M. Gabbay, Francis Jeffrey Pelletier, John Woods, 2012-12-31

The Handbook of the History of Logic is a multi-volume research instrument that brings to the development of logic the best in modern techniques of historical and

interpretative scholarship. It is the first work in English in which the history of logic is presented so extensively. The volumes are numerous and large. Authors have been given considerable latitude to produce chapters of a length, and a level of detail, that would lay fair claim on the ambitions of the project to be a definitive research work. Authors have been carefully selected with this aim in mind. They and the Editors join in the conviction that a knowledge of the history of logic is nothing but beneficial to the subject's present-day research programmes. One of the attractions of the Handbook's several volumes is the emphasis they give to the enduring relevance of developments in logic throughout the ages, including some of the earliest manifestations of the subject. - Covers in depth the notion of logical consequence - Discusses the central concept in logic of modality - Includes the use of diagrams in logical reasoning

d r s construction: Semantics Steven Davis, Brendan S. Gillon, 2004-11-18 Semantics: A Reader contains a broad selection of classic articles on semantics and the semantics/pragmatics interface. Comprehensive in the variety and breadth of theoretical frameworks and topics that it covers, it includes articles representative of the major theoretical frameworks within semantics, including: discourse representation theory, dynamic predicate logic, truth theoretic semantics, event semantics, situation semantics, and cognitive semantics. All the major topics in semantics are covered, including lexical semantics and the semantics of quantified noun phrases, adverbs, adjectives, performatives, and interrogatives. Included are classic papers in the field of semantics as well as papers written especially for the volume. The volume comes with an extensive introduction designed not only to provide an overview of the field, but also to explain the technical concepts the beginner will need to tackle before the more demanding articles. Semantics will have appeal as a textbook for upper level and graduate courses and as a reference for scholars of semantics who want the classic articles in their field in one convenient place.
