Learn about the psychology of fraud victims, including boards of directors and senior management, and what makes them want to believe fraudsters, and therefore making them particularly vulnerable to deception. Just as IT experts gave us computer forensics, we now have a uniquely qualified team immersed in psychology, sociology, psychiatry as well as accounting and auditing, introducing the emerging field of behavioral forensics to address the phenomenon of fraud. The A.B.C.'s of Behavioral Forensics takes you there, with expert advice from a diverse but highly specialized authoring team of professionals (three out of the four are Certified Fraud Examiners): a former accounting firm partner who has a PhD in psychology, a former FBI special agent who has been with investigative practices of two of the Big Four firms, an industrial psychiatrist who has worked closely with the C-level suite of large and small companies, and an accounting professor who has interviewed numerous convicted felons. Along with a fascinating exploration of what makes people fall for the common and not-so-common swindles, the book provides a sweeping characterization of the ecology of fraud using The A.B.C.'s of Behavioral Forensics paradigm: the bad Apple (rogue executive), the bad Bushel (groups that collude and behave like gangs), and the bad Crop (representing organization-wide or even societally-sanctioned cultures that are toxic and corrosive). The book will make you take a longer look when hiring new employees and offers a deeper more complex understanding of what happens in organizations and in their people. The A.B.C. model will also help those inside and outside organizations inoculate against fraud and make you reflect on instilling the core values of your organization among your people and create a culture of excellence and integrity that acts as a prophylactic against fraud. Ultimately, you will discover that, used wisely, behavioral methods trump solely economic incentives. With business fraud on the rise globally, The A.B.C.'s of Behavioral

forensic accounting new york: Computer Applications for Handling Legal Evidence, Police Investigation and Case Argumentation Ephraim Nissan, 2012-06-15 This book provides an overview of computer techniques and tools — especially from artificial intelligence (AI) — for handling legal evidence, police intelligence, crime analysis or detection, and forensic testing, with a sustained discussion of methods for the modelling of reasoning and forming an opinion about the evidence, methods for the modelling of argumentation, and computational approaches to dealing with legal, or any, narratives. By the 2000s, the modelling of reasoning on legal evidence has emerged as a significant area within the well-established field of AI & Law. An overview such as this one has never been attempted before. It offers a panoramic view of topics, techniques and tools. It is more than a survey, as topic after topic, the reader can get a closer view of approaches and techniques. One aim is to introduce practitioners of AI to the modelling legal evidence. Another aim

is to introduce legal professionals, as well as the more technically oriented among law enforcement professionals, or researchers in police science, to information technology resources from which their own respective field stands to benefit. Computer scientists must not blunder into design choices resulting in tools objectionable for legal professionals, so it is important to be aware of ongoing controversies. A survey is provided of argumentation tools or methods for reasoning about the evidence. Another class of tools considered here is intended to assist in organisational aspects of managing of the evidence. Moreover, tools appropriate for crime detection, intelligence, and investigation include tools based on link analysis and data mining. Concepts and techniques are introduced, along with case studies. So are areas in the forensic sciences. Special chapters are devoted to VIRTopsy (a procedure for legal medicine) and FLINTS (a tool for the police). This is both an introductory book (possibly a textbook), and a reference for specialists from various quarters.

forensic accounting new york: *Gambling and War* Justin Conrad, 2017-10-15 In 1914, as Germany mobilized for war, Chancellor Theobald von Bethmann-Hollweg remarked to the country's legislators, "If the iron dice must roll, then God help us." War has often been compared to a game of dice or a lottery. But just as frequently, war has been compared to a game of pure strategy like chess. In reality, the business of negotiating with adversaries, fighting wars, and ending wars is far more complicated than a game of chess, where each player can see all the pieces on the board and knows the possible moves that they can make. War is far more chaotic and unpredictable. And yet, international bargaining and international conflict is not a simple dice game either, where human beings have no control over the outcome. Justin Conrad bets that war is more like a game of poker. *Gambling and War: Risk, Reward, and Chance in International Conflict*. brings readers a war college course taught at a Las Vegas casino. To succeed in poker, it is not enough to simply anticipate the actions of other players and try to outsmart them. A successful player must also understand and appreciate the role of randomness. Additionally, players must confront the reality that all human beings are prone to errors in judgment, which causes them to make suboptimal choices under many circumstances. Taken together, these challenges make poker a fascinating and highly unpredictable game, much like the challenges of international conflicts. Any comprehensive analysis of why wars occur and how they are fought must take into account a variety of factors including strategy, human error, and dumb luck. *Gambling and War* applies lessons learned from poker, blackjack, roulette, and other games of chance to the study of international conflict. Drawing on scholarly insights from a variety of fields, including probability, statistics, political science, psychology, and economics, Conrad offers thoughts on how we can better manage and prevent international conflict, the costliest game of all.
