free textbook for shapiro: Teaching Evolution in a Creation Nation Adam Laats, Harvey Siegel, 2016-03-03 No fight over what gets taught in American classrooms is more heated than the battle over humanity's origins. For more than a century we have argued about evolutionary theory and creationism (and its successor theory, intelligent design), yet we seem no closer to a resolution than we were in Darwin's day. In this thoughtful examination of how we teach origins, historian Adam Laats and philosopher Harvey Siegel offer crucial new ways to think not just about the evolution debate but how science and religion can make peace in the classroom. Laats and Siegel agree with most scientists: creationism is flawed, as science. But, they argue, students who believe it nevertheless need to be accommodated in public school science classes. Scientific or not, creationism maintains an important role in American history and culture as a point of religious dissent, a sustained form of protest that has weathered a century of broad—and often dramatic—social changes. At the same time, evolutionary theory has become a critical building block of modern knowledge. The key to accommodating both viewpoints, they show, is to disentangle belief from knowledge. A student does not need to believe in evolution in order to understand its tenets and evidence, and in this way can be fully literate in modern scientific thought and still maintain contrary religious or cultural views. Altogether, Laats and Siegel offer the kind of level-headed analysis that is crucial to finding a way out of our culture-war deadlock.

free textbook for shapiro: *The Neurological Patient in History* L. S. Jacyna, Stephen T. Casper, 2012 Parkinson's, Alzheimer's, Tourette's, multiple sclerosis, stroke: all are neurological illnesses that create dysfunction, distress, and disability. With their symptoms ranging from impaired movement and paralysis to hallucinations and dementia, neurological patients present myriad puzzling disorders and medical challenges. Throughout the nineteenth and twentieth centuries countless stories about neurological patients appeared in newspapers, books, medical papers, and films. Often the patients were romanticized; indeed, it was common for physicians to cast neurological patients in a grand performance, allegedly giving audiences access to deep philosophical insights about the meaning of life and being. Beyond these romanticized images, however, the neurological patient was difficult to diagnose. Experiments often approached unethical realms, and treatment created challenges for patients, courts, caregivers, and even for patient advocacy organizations. In this kaleidoscopic study, the contributors illustrate how the neurological patient was constructed in history and came to occupy its role in Western culture. Stephen T. Casper is Assistant Professor in Humanities and Social Sciences at Clarkson University. L. Stephen Jacyna is reader in the History of Medicine and Director of the Centre for the History of Medicine at University College London.

free textbook for shapiro: *Dreamcrafting* Paul Levesque, Art McNeil, 2003-02-16 Many people set out to achieve a dream-starting a business or learning to play the piano or publishing a book-but they don't succeed, and the dream fizzles away. In many cases, these people have lots of skills and expertise, such as deep knowledge of the business or career they are interested in, so why don't they succeed? Paul Levesque and Art McNeil have discovered that making a dream come true requires cultivating skills of a higher order-macroskills-that inevitably spell the difference between success and failure no matter what the specifics of a person's dreams are. These are the skills Dreamcrafting outlines in detail.

free textbook for shapiro: Education and the Culture of Print in Modern America Adam R. Nelson, John L. Rudolph, 2010-05-26 Vividly revealing the multiple layers on which print has been produced, consumed, regulated, and contested for the purpose of education since the mid-nineteenth century, the historical case studies in Education and the Culture of Print in Modern America deploy a view of education that extends far beyond the confines of traditional classrooms. The nine essays examine "how print educates" in settings as diverse as depression-era work camps, religious training, and broadcast television—all the while revealing the enduring tensions that exist among the controlling interests of print producers and consumers. This volume exposes what counts as education in American society and the many contexts in which education and print intersect. Offering perspectives from print culture history, library and information studies, literary studies, labor history, gender history, the history of race and ethnicity, the history of science and technology, religious studies, and the history of childhood and adolescence, Education and the Culture of Print in Modern America pioneers an investigation into the intersection of education and print culture.
