fruit or vegetable worksheet: Eat Well & Keep Moving Lilian W.Y. Cheung, Hank Dart, Sari Kalin, Brett Otis, Steven L. Gortmaker, 2015-12-23 In North America obesity continues to be a problem, one that extends throughout life as children move into adolescence and adulthood and choose progressively less physical activity and less healthy diets. This public health issue needs to be addressed early in childhood, when kids are adopting the behaviors that they will carry through life. Eat Well & Keep Moving, Third Edition, will help children learn physically active and nutritionally

healthy lifestyles that significantly reduce the risk of obesity, heart disease, high blood pressure, type 2 diabetes, and other diseases. **BENEFITS** This award-winning evidence-based program has been implemented in all 50 states and in more than 20 countries. The program began as a joint research project between the Harvard School of Public Health (currently the Harvard T.H. Chan School of Public Health) and Baltimore Public Schools. In extensive field tests among students and teachers using the program, children ate more fruits and vegetables, reduced their intake of saturated and total fat, watched less TV, and improved their knowledge of nutrition and physical activity. The program is also well liked by teachers and students. This new edition provides fourth- and fifth-grade teachers with the following:

- Nutrition and activity guidelines updated according to the latest and best information available
- 48 multidisciplinary lessons that supply students with the knowledge and skills they need when choosing healthy eating and activity behaviors
- Lessons that address a range of learning outcomes and can be integrated across multiple subject areas, such as math, language arts, social studies, and visual arts

A separate website, www.eatwellandkeepmoving.org, provides detailed information for food service managers interested in making healthful changes to their school menus; this information includes recipes, preparation tips, promotional materials, classroom tie-ins, and staff training. The web resource also details various approaches to getting parents and family members involved in Eat Well & Keep Moving. A Holistic Approach Eat Well & Keep Moving is popular because it teaches nutrition and physical activity while kids are moving. The program addresses both components of health simultaneously, reinforcing the link between the two. And it encompasses all aspects of a child's learning environment: classroom, gymnasium, cafeteria, hallways, out-of-school programs, home, and community centers. Further, the material is easily incorporated in various classroom subjects or in health education curricula. Eight Core Principles Central to its message are the eight core Principles of Healthy Living. Those principles—at least one of which is emphasized in each lesson—have been updated to reflect key targets as defined by the CDC-funded Childhood Obesity Research Demonstration partnership. These are the principles:

- Make the switch from sugary drinks to water.
- Choose colorful fruits and vegetables instead of junk food.
- Choose whole-grain foods and limit foods with added sugar.
- Choose foods with healthy fat, limit foods high in saturated fat, and avoid foods with trans fat.
- Eat a nutritious breakfast every morning.
- Be physically active every day for at least an hour per day.
- Limit TV and other recreational screen time to two hours or less per day.
- Get enough sleep to give the brain and body the rest it needs.

Flexible, Inexpensive, Easy to Adopt

It fits within school curricula, uses existing school resources, is inexpensive to implement, and is easy to adopt. Most important, armed with the knowledge they can gain from this program, elementary students can move toward and maintain healthy behaviors throughout their lives.

fruit or vegetable worksheet: *Minimally Processed Refrigerated Fruits and Vegetables* Fatih Yildiz, Robert C. Wiley, 2017-05-11 The first edition of Minimally Processed and Refrigerated Fruits and Vegetables, edited by Robert C. Wiley and Fatih Yildiz, was published in 1994. At the time of publication, this was a new concept and was well-received by the scientific community. Minimally processed foods are whole plant tissues (the identity of the plant tissue is recognized by consumers), which may contain active enzymes, live tissues, and plant cells. These are some of the basics for the healthy food design. The overall function of these foods is to provide convenient (ready-to-serve, ready-to cook, free of any pesticides and contaminants), like-fresh products for food service and retail consumers. Minimally Processed and Refrigerated Foods (MPR) have been popular in many countries. The following are some of the advantages offered by MPR produce foods: 1. Ease of portion control in the food service industry 2. Lower transportation cost (all inedible portions of the produce are removed prior to transportation) 3. No waste is generated at the point of consumption 4. Utilization and recycling of the waste is much easier 5. Value-added new fruit and vegetable products and meal development is possible and easy 6. No requirement is needed for phytosanitary control during trade 7-No glycation end products formation during processing, 8.Degree of food processing is minimized for optimal health of human, the processing plant for MPR produce, which is not addressed in any other books on this topic, will be described in this second edition. Also, comparison of minimal processing technologies with other technologies was explained in the first publication and will be updated in this second edition. During the last 200 years the purpose of food processing was a-safety(sterilization, Pasteurization,1804 Nicholas Apert,Pasteur 1867), and b-prevention of deficiency diseases(Enrichments),but MPR foods provides a two new dimensions to food processing ; a-Prevention of chronic diseases(bioactive compounds) and b-Optimum health (functional foods,Superfoods,Neutraceuticals, and Medical foods) for human.
