hyperion profitability and cost management: Enterprise Performance Intelligence and Decision Patterns Vivek Kale, 2017-10-05 Vivek Kale has written a great book on performance management that focuses on decision-making; on continuous, incremental improvement; and on identifying common patterns in becoming a more intelligent organization. —James Taylor, CEO of Decision Management Solutions and author of Real-World Decision Modeling with DMN Introducing the concepts of decision patterns and performance intelligence, Vivek Kale has written another important book on the issues faced by contemporary organizations.—Gary Cokins, author of Predictive Business Analytics and Performance Management: Integrating Strategy Execution, Methodologies, Risk, and Analytics Enterprise Performance Intelligence and Decision Patterns unravels the mystery of enterprise performance intelligence (EPI) and explains how it can transform the operating context of business enterprises. It provides a clear understanding of what EPI means, what it can do, and application areas where it is practical to use. The need to be responsive to evolving customer needs and desires creates organizational structures where business intelligence (BI) and decision making is pushed out to operating units that are closest to the scene of the action. Closed-loop decision making resulting from a combination of on-going performance management with on-going BI can lead to an effective responsive enterprise; hence, the need for performance intelligence (PI). This pragmatic book: Introduces the technologies such as data warehousing, data mining, analytics, and business intelligence systems that are a first step toward enabling data-driven enterprises. Details decision patterns and performance decision patterns that pave the road for performance intelligence applications. Introduces the concepts, principles, and technologies related to performance measurement systems. Describes the concepts and principles related to balance scorecard systems (BCS). Introduces aspects of performance intelligence for the real-time enterprises. Enterprise Performance Intelligence and Decision Patterns shows how a company can design and implement instruments ranging from decision patterns to PI systems that can enable continuous correction of business unit behavior so companies can enhance levels of productivity and profitability.

hyperion profitability and cost management: Performance Measurement Luca Quagini, Stefano Tonchia, 2010-08-24 Business Intelligence (BI) and Performance Management (PM) – the development and delivery of business insight for users and the management of execution based on that insight – are two solution-types that promise to bring great value to enterprises. Yet most organizations haven't yet realized the elusive benefits of these two important disciplines. The reasons for this are manifold. However, the primary causes are the culture of the organization and its leadership. This is a topic, which I've addressed at length in my latest book: Profiles in Performance – Business Intelligence Journeys and the Roadmap for Change. The culture and leadership of the organization determines the importance and strategic intent surrounding the use of BI and PM. Sadly, most organizations lack the motivation to embrace transparency and accountability – or to align with the strategy of the organization – enabling execution and coordination in unison with the mission. However, once an organization and its leadership are ready to take a step towards real change – creating an environment of openness, sharing and alignment – with BI and PM as its centerpiece – the next question then becomes one of “how and where to begin”? Even with great strategic intent, missteps in the development and deployment of BI and PM can cause disillusionment and disappointment – lending support to the naysayers of the organization – and leading to failure and abandonment of these critical programs.
