importance of modern technology in points: *Evaluating New Technologies* Paul Sollie, Marcus Düwell, 2009-04-03 human practices? How are we to morally evaluate technology developments that have open horizons, encompass uncertainties, and lack control? Technology is influential on society; technological innovations act upon the perception of ourselves, the world, and our relation with fellow humans and other objects. Technology is changing everything we do by creating new entities (such as software, nanoparticles, or Internet), by changing the scale of activities (e. g. vast amounts of data about people can be stored and analysed, and not infrequently without people - ing aware of this), by generating new kinds of knowledge (for instance about illnesses, the human genome and so on). Technologies, as a consequence, impinge upon our morality and for this reason an ethics of technology should not wait passively until moral problems arise and not only focus on identified and existing moral problems, but contemplate technology developments and possible impacts proactively. However, this is easier said than done, because a prospective and proactive evaluation of technology developments is complicated by complexity and uncertainty. The uncertainty of technology development is closely related to one of the striking features of technology, namely what Jim Moor has coined logical malleability. (1985, 269) Technological devices are logically malleable in that they can be shaped to do any activity that can be characterised in terms of

logical operations.

importance of modern technology in points: **Modern Technologies Enabling Innovative Methods for Maritime Monitoring and Strengthening Resilience in Maritime Critical Infrastructures** Maciej Klósak, Amine Bendarma, 2024-10-15 Maritime infrastructures are fundamental to the working of societies and economies. They play a crucial role in supply, with 90% of commercial trade exchanges carried out worldwide handled by the maritime industry, in the functioning of the economy, the maintenance of mobility and the deployment of renewable energies. For the past decade, the attention of developed democratic nations has been focused on the protection of vital terrestrial objects, but less attention has been paid to critical maritime infrastructures and the need to increase their resilience. This book, *Modern Technologies Enabling Innovative Methods for Maritime Monitoring and Strengthening Resilience in Maritime Critical Infrastructures*, presents 23 papers delivered at the NATO Advanced Training Course (ATC) hosted in hybrid format from 15-20 January 2024 in Agadir, Morocco. The aim of the ATC was to cover the problem of monitoring critical maritime infrastructure in an interdisciplinary manner, and it was attended by researchers and students, security officers, stakeholders, and experts in tackling terrorism or other violent threats. The ATC was divided into 4 blocks: general aspects of strengthening the resilience of maritime critical infrastructure; unmanned systems (USs) and sensor network technology; monitoring, data analysis and structural modeling; and cybersecurity and protection of IT maritime infrastructures. There was also one practical session. The book covers many ways in which unmanned systems, sensor networks and other digital technologies can be used to monitor threats to maritime critical infrastructure, and will be of interest to all those working in the field.

importance of modern technology in points: Innovation and Economic Development

Jon-Arild Johannessen, 2025-10-22 Microeconomic theorists have largely excluded entrepreneurship and innovation from their theoretical analyses and models. In the existing literature, innovative entrepreneurs are hardly mentioned at all, yet it is precisely these entrepreneurs who, through their establishment of innovation-based start-ups, for example, start-ups based on technological innovations, create economic growth and help promote prosperity worldwide. The most recent examples from the digital revolution alone, such as Microsoft, Apple, and TikTok, speak to the importance of innovative entrepreneurship. This book addresses the lack of microeconomic theory concerning the role of innovation as a driver for economic development and explores the topic from multiple perspectives: innovative entrepreneurship, competence, productivity, automation, and the institutional framework. By analysing these five pillars, the book provides a broad idea of how these

interactions all impact how the innovation economy continues to thrive. The book also describes the application of theory to real life by providing practical and real-life examples and case studies. It demonstrates the need to foster the spirit of innovation and entrepreneurship for sustainable development as a key driver of uninterrupted industrial development. It also highlights the critical gap in conventional economic models, which reduce everything to a single number and fail to analyse how innovation shapes both economic structures and the education systems and policies needed to adapt to them. By incorporating systems thinking and evolutionary economics, the book offers a multidimensional analysis of the innovation economy. This broad perspective enhances its theoretical depth and widens its appeal to scholars and researchers across various disciplines. Its practical approach also makes the book relevant to policymakers, educators, and practitioners.
