Many of those people and places are long gone and have vanished almost like they never existed, but the lessons they left behind are still very much alive. Through his recollecting, the theme of traces left behind by wars, relationships, towns, cities, and detective work are explored in a philosophical, poetic, and introspective - sometimes stream-of-consciousness - writing style in this original noirish novel that takes place on the East

in stars and time physical copy: When the Girls Come Out to Play Katharine Milcoy, 2017-09-07 Filling a long-standing gap both in women's history and in the material history of class culture, this book is a unique and necessary reassessment of the social and cultural scene during the inter-war period in England. By combing over the everyday practices of working-class girls in 1920s and 30s England, including a sharp focus on Bermondsey south-east London and oral testimony from women who grew up in the period, Milcoy demonstrates the persistence and ingenuity with which these teenagers gained access to the commercial leisure culture of the day, from hairstyles and fashionable dress to films, music, and dances. She shows how this access had a startling ripple effect, transforming the way young women rehearsed and contested their identities so that play, rather than work, became the primary mechanism for defining subjectivity and constructing femininity. When the Girls Come Out to Play is a refreshing and nuanced take on the social and cultural history of England between the World Wars.

The book also evaluates the relation between statutory copyright law as well as case law on the subject. The book is divided into ten chapters. Chapter 1 is introductory, while Chapters 2 and 3 discuss the origin and development of law of copyright at international as well as national level. The most important debatable issue in copyright law is "works in which copyright subsists", and Chapter 4 is devoted to this aspect. Chapter 5 explores various issues relating to author of work, owner of copyright and recognised rights of copyright owner. The terms of copyright, licensing of copyright, international copyright and registration of copyright are the subject matters of Chapter 6, while rights of broadcasting organisation and of performers (neighbouring rights) are the subject matters of Chapter 7. Internet is the greatest communication medium of the contemporary era, and there is an inherent link between law of copyright and internet. Therefore, Chapter 8 is devoted to discuss various issues relating to "protection of copyright in internet". While Chapter 9 demonstrates the law relating to infringement of copyright and defences of copyright liability, Chapter 10 discusses the enforcement of copyright in India. This book will be useful to the undergraduate and postgraduate students of Law, researchers, academicians, jurists, lawyers, judges as well as members of civil society.

in stars and time physical copy: *Coming Full Circle* Wanda Lloyd, 2020-02-04 “Inspiring reading for aspiring journalists and students of civil rights.” — Kirkus Reviews Wanda Smalls Lloyd’s *Coming Full Circle: From Jim Crow to Journalism*—with a foreword by best-selling author Tina McElroy Ansa—is the memoir of an African American woman who grew up privileged and educated in the restricted culture of the American South in the 1950s-1960s. Her path was shaped by segregated social, community, and educational systems, religious and home training, a strong cultural foundation, and early leadership opportunities. Despite Jim Crow laws that affected where she lived, how she was educated, and what civil rights she would be denied, Lloyd grew up to realize her childhood dream of working as a professional journalist. In fact, she would eventually hold some of the nation’s highest-ranking newspaper editorial positions and become one of the first African American women to be the top editor of a mainstream daily newspaper. Along the way she helped her newspapers and other media organizations understand how the lack of newsroom and staff diversity interfered with perceptions of accuracy and balance for their audiences. Her memoir is thus a window on the intersection of race, gender, culture and the media’s role in our uniquely American experiment in democracy. How Lloyd excelled in a profession where high-ranking African American women were rare is a memorable story that will educate, entertain, and inspire. *Coming Full Circle* is a self-reflective exploration of the author’s life journey from growing up in coastal Savannah, Georgia, to editing roles at seven daily newspapers around the country, and circling back to her retirement in Savannah, where she now teaches journalism to a new generation.

in stars and time physical copy: *No Stars in Jefferson Park* Maggie Andersen, 2025-10-15 A Chicagoan’s coming-of-age memoir finds courage in the face of immense loss In her early twenties, Maggie Andersen was a founding ensemble member of Chicago’s storied Gift Theatre with her then-boyfriend, Michael Patrick Thornton. But after a series of spinal strokes left Thornton paralyzed, Andersen made the heart-wrenching decision to leave him, along with their growing company and, later, her beloved city. *No Stars in Jefferson Park* alternates between two narratives: the energy and excitement of making art in Chicago’s thriving storefront theater scene and the devastating day-to-day realities of rehabilitation and rebuilding—and somewhere in the middle finding the courage to choose yourself. Over the past twenty-plus years, the Gift—now performing in the working-class neighborhood of Portage Park—has become one of the most vital storefront theaters in Chicago, with Thornton’s career taking him to Hollywood and Broadway. But Andersen’s story has brought her back home. *No Stars in Jefferson Park* is a testament to lifelong friendship, a love letter to Chicago, and a profound coming-of-age story about the pain and necessity of putting yourself first.

in stars and time physical copy: *Star Gazing* Jackie Stacey, 2013-11-05 In a historical investigation of the pleasures of cinema, *Star Gazing* puts female spectators back into theories of spectatorship. Combining film theory with a rich body of ethnographic research, Jackie Stacey investigates how female spectators understood Hollywood stars in the 1940’s and 1950’s. Her study challenges the universalism of psychoanalytic theories of female spectatorship which have dominated the feminist agenda within film studies for over two decades. Drawing on letters and questionnaires from over three hundred keen cinema-goers, Stacey investigates the significance of

certain Hollywood stars in women's memories of wartime and postwar Britain. Three key processes of spectatorship - escapism, identification and consumption - are explored in detail in terms of their multiple and changing meanings for female spectators at this time. *Star Gazing* demonstrates the importance of cultural and national location for the meanings of female spectatorship, giving a new direction to questions of popular culture and female desire.

in stars and time physical copy: *Stardom* Christine Gledhill, 2003-09-02 In the past stars have been studied as cogs in a mass entertainment industry selling desires and ideologies. But since the 1970s, new approaches have reopened debate, as film and cultural studies try to account for the active role of the star in producing meanings, pleasures, and identities for a diversity of audiences. *Stardom* brings together for the first time some of the major writing of the last decade which seeks to understand the phenomenon of stars and stardom. Gathered under four headings - The System, Stars and Society, Performers and Signs, Desire and Politics - these essays represent a range of approaches drawn from film history, sociology, textual analysis, audience research, psychoanalysis, and cultural politics. They raise important issues about the politics of representation and the cultural limitations and possibilities of stars.

Kylie Minogue is an Australian pop icon who has sold over 80 million records worldwide. The pint-sized pop princess showed us she had the 'wow' factor when she first graced our screens as Charlene Mitchell in *Neighbours* in 1986. She 'did it again' (and again and again) through her numerous incarnations. From her early days as PWL's pop puppet, to the ultimate puppet master that she has transformed into today. Kylie achieved a massive musical milestone in 2020—being the first woman to top the album charts in five consecutive decades. She is one of our nation's most beloved pop princesses, or arguably - if you ask her legion of fans (me included) - THE most beloved Pop Queen. *Kylie Minogue: Album by Album* explores in detail Ms Minogue's extensive repertoire, spanning more than three decades. It commemorates this unique artist's genuinely exceptional, unmatched, and often under-appreciated career. The author is both a fan and a music critic, who examines Kylie's life and career from both perspectives. You will discover how Kylie became a pop icon, how she reinvented herself over the years, and how she influenced the music industry with her style and sound. This book is not just another biography, or discography critique; it is a unique analysis of Kylie's musical legacy and cultural impact. in stars and time physical copy: *Gaze, Vision, and Visuality in Ancient Greek Literature* Alexandros Kampakoglou, Anna Novokhatko, 2018-03-05 Visual culture, performance and spectacle lay at the heart of all aspects of ancient Greek daily routine, such as court and assembly, cult and ritual, and art and culture. Seeing was considered the most secure means of obtaining knowledge, with many citing the etymological connection between 'seeing' and 'knowing' in ancient Greek as evidence for this. Seeing was also however often associated with mere appearances, false perception and deception. Gazing and visuality in the ancient Greek world have had a central place in the scholarship for some time now, enjoying an abundance of pertinent discussions and bibliography. If this book differs from the previous publications, it is in its emphasis on diverse genres: the concepts 'gaze', 'vision' and 'visuality' are considered across different Greek genres and media. The recipients of ancient Greek literature (both oral and written) were encouraged to perceive the narrated scenes as spectacles and to 'follow the gaze' of the characters in the narrative. By setting a broad time span, the evolution of visual culture in Greece is tracked, while also addressing broader topics such as theories of vision, the prominence of visuality in specific time periods, and the position of visuality in a hierarchisation of the senses.

in stars and time physical copy: Introducing the Stars Martin Beech, 2019-03-28 This textbook introduces the reader to the basic concepts and equations that describe stellar structure. Various approximation techniques are used to solve equations, and an intuitive rather than rigorous approach is employed to interpret the properties of the stars. The book provides step-by-step instructions, helpful exercises and relevant historical lessons to familiarize students with key concepts and mathematical theories. Based upon a series of one-semester (12 weeks) elective undergraduate courses offered at the University of Regina, this book is intended for students who are interested in seeing how basic calculus and introductory physics can be applied to the understanding of the stars from their formation to their death. The text provides an intermediate stepping stone between lower-level undergraduate classes and more specialized postgraduate texts on the subject of stellar structure.

in stars and time physical copy: Project STAR Harold P. Coyle, 2001 The Universe in Your Hands Project STAR (Science Teaching through its Astronomical Roots) is an astronomy course that also teaches real-world math and physics. Project STAR capitalizes on students' inherent interest in the limitless universe that surrounds them. This second edition uses a new approach that is consistent with the philosophy of the authors: students learn science better by making measurements and observations than by memorizing facts. Each chapter begins with questions to test preheld views on certain subjects. Students then use measurements and observations to explore the models in the chapters. Questions are sprinkled throughout the book to test understanding along with cartoons to leaven the learning with humor. Hands-on activities play an essential role in this 1-year course. In completing these hands-on activities, students will: make observations of the skies build models use models to explain observations and make predictions find everyday applications for such models The Student Text for Project STAR, Second Edition includes updated information, is easier to use and visually more appealing. The material is laid out with new illustrations for greater clarity and understanding. A color plate section supports activities and text related to the study of spectra. A reference section has also been added. It lists astronomy resources on the web. The Astronomy Explorer CD-ROM is included with the Student Text. This interactive CD-ROM contains movies and animations related to astronomy. The student exercises provide an excellent foundation for understanding the complexities of the universe. A glossary of terms is also part of the CD.

Gorgi Shepentulevski, 2001-10-12 We live in a world where reality is being presented to us as fantasy, and fantasy and as a reality. This world is not what we have been told to be, and everything that we know of is fake fictional stories written by Artificial Intelligence computers on sets of algorithm instructions that tells it what to write. What we know of our world was not written by humans for the most part of it, but by machines, they only needed to put in a plot or parameters and the AI computers were writing up the stories guided by algorithms. In this book of 23 Chapters there are so many revealed secrets of the true nature of the world we

live in and creation as a whole, scattered throughout all 90 pages of this book and because of that it should be read thoroughly. Starting from Chapter 1, this book explains the true origin of humanity and creation as a whole, who we really are, where did we come from, and how did we get here! Chapter 2 explains the true story of the Trojan War, and the real reason why humanity is in perpetual wars ever since the Great re-set about 200 years ago, and the takeover of our 4 continents by Satanic forces. Chapter 3 explains what the Dome is made of that we live Under, and when it was put in place. Chapter 4 explains the primary purpose of the Dome as a Macro cosmos, and its importance for the creation of humanity as Micro cosmos, as above – so below. Chapter 5 explains the true purpose of the Portal at North Pole known as Ruper Nigra, or Mount Mery, which I call Mother-mirror Portal. Chapter 6 explains how exactly water was made in the Underworld by the Portal machine I call Mother Portal. Chapter 7 explains how the Dome was made by the Father Portal machine which is placed under the ground in the centre of the world. Just a remainder here that the centre of the world is not at the North Pole, but somewhere else. Chapter 8 explains what exactly is Torus field dynamics that creates the Dome we live under, and how it works. Chapter 9 explains exactly what an Atom is, its true origin and function. Chapter 10 explains the origin of the Cross, how it came into existence, and its true purpose for human-kind creation. Chapter 11 explains the meaning of the Cross in the middle text of Rosetta Stone. Chapter 12 explains the real meaning of the Cross in the Bible referred to as 'The Twin Flame'. Chapter 13 explains the true meaning of the words 'Equator', 'North' – 'South', 'East' – 'West', and 'Horizon'. Chapter 14 explains exactly why Atmospheric Energy increases by 100 Volts going upwards into the sky. Chapter 15 explains the Intelligent design of Creation. Chapter 16 explains exactly how Stars were Born. Chapter 17 explains exactly who God is. Chapter 18 explains what the element of Fire is. Chapter 19 explains what the element of Air is. Chapter 20 explains what the element of Water is. Chapter 21 explains what the element of Earth is. Chapter 22 explains the true meaning of Saint Bartholomew. Chapter 23 explains all about hexagonal growth formation in nature as mathematical construct.
