math games like kahoot: African American Males and Video Games Kenneth Jones, 2025-03-20 African American males are confronted with formidable barriers in their pursuit of quality education, resulting in stark disparities in academic performance, economic opportunities, and social outcomes. Despite numerous educational initiatives striving for parity, African American males persistently bear the brunt of the highest rates of suspensions, expulsions, and dropout rates, surpassing all other demographic groups. Educational environments often fail to acknowledge and integrate the cultural and social needs of Black males, viewing them as problems rather than recognizing their immense potential for academic and leadership success. The prevalence of negative stereotypes in media, particularly in video games, exacerbates societal biases, portraying African American males as inherently violent and criminal. These representations contribute to implicit biases that affect perceptions and treatment in real-life scenarios. The systemic issues within the education system, coupled with socioeconomic factors, result in African American males being underrepresented in advanced placement and gifted education programs. This underrepresentation limits their opportunities for higher education and professional advancement. Confronting these challenges necessitates a comprehensive approach that encompasses the creation of inclusive educational environments, the eradication of systemic racism, and the promotion of positive representations of African American males in media. By acknowledging and fostering the potential of Black males, society can strive to reduce disparities and cultivate a more equitable and just education system that recognizes and celebrates their academic and professional achievements. *African American Males and Video Games* explores the perspectives of four African American male college students aged 18 to 21 on the impact of video games on their academic growth and development. The participants, all maintaining a GPA of 3.0 or higher, shared their experiences with teachers, video games, and coping mechanisms. This qualitative approach allowed for a rich understanding of the participant's experiences and the role of video games in their academic and mental well-being. Video games emerged as a significant coping tool for the participants, providing a mental escape from academic and social pressures. The games allowed them to engage in competitive and creative activities, fostering a sense of accomplishment and reducing stress. For example, games like NBA 2K21 and Forza Horizon 4 enabled them to explore alter egos and interests in a virtual space, offering entertainment and a sense of community. *African American Males and Video Games* is a critical text for exploring alternatives in providing a quality education experience for young African American males.
