math magician color quest: Sweater Quest Adrienne Martini, 2010-03-23 A fascinating and witty memoir chronicling the author's mission to knit the holy grail of all sweaters. I knit so I don't kill people —bumper sticker spotted at Rhinebeck Sheep and Wool Festival For Adrienne Martini, and countless others, knitting is the linchpin of sanity. As a working mother of two, Martini wanted a challenge that would make her feel in charge. So she decided to make the Holy Grail of sweaters—her own Mary Tudor, whose mind-numbingly gorgeous pattern is so complicated to knit that its mere mention can hush a roomful of experienced knitters. Created by reclusive designer Alice Starmore, the Mary Tudor can be found only in a rare, out-of-print book of Fair Isle-style patterns, Tudor Roses, and requires a discontinued, irreplaceable yarn. The sweater, Martini explains, is a knitter's Mount Everest, our curse, and our compulsion. I want one more than I can begin to tell you. And so she took on the challenge: one year, two needles, and countless knits and purls to conquer Mary Tudor while also taking care of her two kids, two cats, two jobs, and (thankfully) one husband—without unraveling in the process. Along the way, Adrienne investigates the tangled origins of the coveted pattern, inquires into the nature of artistic creation, and details her quest to buy supplies on the knitting black market. As she tries not to pull out her hair along with rows gone wrong, Martini gets guidance from some knitterati, who offer invaluable inspiration as she conquers her fear of Fair Isle. A wooly Julie and Julia, this epic yarn celebrates the profound joys of creating—and aspiring to—remarkable achievements.

math magician color quest: The Vital Dimension Carl Gunther, 2006-08 The nature of life is at the center of national debate. Are we mere material mechanisms? Or is life a vast nonphysical dimension that organizes matter? Does God exist? The issue is not academic. The question defines the nature of human reality. What are the limits of consciousness? Do our memories exist in our brains or in the vastness of time? The Vital Dimension examines the thoughts of eminent scientists such as the Nobel Prize Winners Erwin Schrödinger, Werner Heisenberg and Sir John Eccles who concluded that life is a mysterious force unknown to modern science. The Vital Dimension embraces René Descartes' admonition, Doubt all that can be doubted! to look beyond the rigid preconceptions of mechanistic biology and construct a truly radical theory of life. More than mere speculation, the weight of scientific evidence points to the fact that the modern, material view of reality is on the verge of a profound revolution. The world stands at the threshold to the Vital Dimension. Dare we open the door?
