math learning center wsu: Technology in Student Affairs: Supporting Student Learning and Services Kevin Kruger, 2005 The literature and research on the use of technology in student affairs is still very limited. This volume of New Direction for Student Services was written to increase our understanding of the role of technology in the student learning experience of campus-based and as well as distance learners. Information technology has become a central tool in creating 24/7 self-service experiences for students interacting with campus administrative functions. Recent technologies also create the real possibility of moving beyond administrative functions to playing a central role in student learning, community development and student development. This volume monograph attempts to capture the current thinking around the use of technology in student affairs. It is not a review of the actual technologies in use in student affairs. The pace of change is so fast that such a treatment would make the writing out-of-date within two years. In that light, this volume focuses less on the technology and more on the ways in which the technology is altering the organization of student affairs, the ways in which the lines between campus based students and distance learners are blurring and the increasing role technology is playing in student learning.

math learning center wsu: *Winning the Math Wars* Martin L. Abbott, Brian Ferriso, Karen Smith, 2011-07-01 Washington State is about to enter a new phase of the math wars. Since the late 1980s, the debate over how best to teach mathematics to schoolchildren has raged worldwide among educators, politicians, and parents. The stakes are high. To operate effectively in a global, twenty-first-century economy and polity, the United States must provide an education in mathematics that is both excellent and equitable. In this volume, four scholars at the Washington School Research Center (WSRC) at Seattle Pacific University present original research drawn from statistical studies of state educational data and from thousands of classroom observations carried out by The BERC Group. They assess the current state of math education and review its history and development. The authors also provide a dispassionate review of the extensive international, national, and state literature. The in-depth observational research in *Winning the Math Wars* confirms that the real issue is neither the approach to teaching--traditional or reform--nor the type of curriculum. If America's goal of educational equity and excellence is to be achieved, then math teachers everywhere must be fully supported in developing the specific skills that are ideal for educating all students. The authors discussion focus on four principles for improving math teaching and learning: fidelity to reform efforts by all involved; an emphasis on instruction and instructional tools; the critical nature of mathematical knowledge; and the need for transformational change. *Winning the Math Wars* is an important book for policy makers, school leaders, practitioners of mathematics education, parents, and anyone who wants to make sense of the math wars.

math learning center wsu: *Community College Mathematics* Brian Cafarella, 2022-06-29 This book explores the rich history of community college math with a specific focus on gatekeeper math classes. Gatekeeper math classes include courses such as college algebra, introduction to statistics, and all developmental math classes. For community colleges, successful completion of these classes is imperative for student retention. This book presents a decade-by-decade analysis of the history of community college mathematics. The author employs a mix of conceptual, empirical, and quantitative research. The empirical research stems from interviews with 30 community college faculty members from seven community colleges. From the 1970s to the pandemic in the early 2020s, the book explores math curricula as well as trends, initiatives, teaching practices, and mandates that have impacted community college math. The positives and negatives of such trends, initiatives, and mandates are presented along with suggestions on how to apply such knowledge going forward. The author addresses the key questions: How can we build a future model for community college gatekeeper math classes that is both successful and sustainable? Additionally, how can we learn from the past and the present to build such a model? This book will be ideal for students in graduate programs focusing on community college leadership or developmental education leadership as well as all those hoping to improve success rates in community college mathematics programs.

math learning center wsu: *Shared Leadership in Higher Education* Elizabeth M. Holcombe, Adrianna J. Kezar, Susan L. Elrod, Judith A. Ramaley, 2023-07-03 Today's higher education challenges necessitate new forms of leadership. A volatile financial environment and the need for new business models and partnerships to address the impact of new technologies, changing demographics, and emerging societal needs, demand more effective and innovative forms of leadership. This book focusses on a leadership approach that has emerged as particularly effective for organizations facing complex challenges: shared leadership. Rather than concentrating power and authority in an individual leader at the top of an organization, shared leadership involves multiple people influencing one another across varying levels and at different times. It is a flexible, collective, and non-hierarchical approach to leadership. Organizations that have implemented shared leadership have been better able to learn, innovate, perform, and adapt to the types of external challenges that campuses now face and that will continue to shape higher education in the future. This book brings together the two foremost scholars of higher education who have studied, described and evaluated the impact of shared leadership, a university chancellor with prior experience of facilitating systemic institutional change at two university systems, and the former president of three universities where she coordinated processes that led to the transformational changes needed renew institutional mission and purpose. Opening with four chapters that define the nature of shared leadership, describe its key characteristics, and how to build institutional capacity, the book then presents ten institutional cases. Ranging from institution-wide initiatives at four year colleges and a community college, to examples of managing change in a college, a center, and across STEM departments, the contributing authors describe the context and drivers of the need for change, the building of shared vision to create coalitions, lessons learned, and outcomes. Intended as a resource for leaders at the highest levels such as Presidents and Provosts as well as mid-level leaders such as deans, directors, and department chairs, the book is also addressed to faculty and staff who are interested in collaborating with campus leaders on institutional decision-making or

creating new change initiatives. It is intended to build capacity for shared leadership across institutions and for use in leadership courses and programs.

math learning center wsu: *Improving Urban Schools* Chance W. Lewis, Mary Margaret Capraro, Robert M. Capraro, 2013-04-01 Although STEM (Science, Technology, Engineering, and Mathematics) has been diversely defined by various researchers (e.g. Buck Institute, 2003; Capraro & Slough, 2009; Scott, 2009; Wolf, 2008), during the last decade, STEM education has gained an increasing presence on the national agenda through initiatives from the National Science Foundation (NSF) and the Institute for Educational Sciences (IES). The rate of technological innovation and change has been tremendous over the past ten years, and this rapid increase will only continue. STEM literacy is the power to “identify, apply, and integrate concepts from science, technology, engineering, and mathematics to understand complex problems and to innovate to solve them” (Washington State STEM, 2011, Internet). In order for U.S. students to be on the forefront of this revolution, ALL of our schools need to be part of the STEM vision and guide students in acquiring STEM literacy. Understanding and addressing the challenge of achieving STEM literacy for ALL students begins with an understanding of its element and the connections between them. In order to remain competitive, the Committee on Prospering in the Global Economy has recommended that the US optimize “its knowledge-based resources, particularly in science and technology” (National Academies, 2007, p. 4). Optimizing knowledge-based resources needs to be the goal but is also a challenge for ALL educators (Scheurich & Huggins, 2009). Regardless, there is little disagreement that contemporary society is increasingly dependent on science, technology, engineering, and mathematics and thus comprehensive understandings are essential for those pursuing STEM careers. It is also generally agreed that PK-12 students do not do well in STEM areas, both in terms of national standards and in terms of international comparisons (Kuenzi, Matthews, & Mangan, 2006; Capraro, Capraro, Yetkiner, Corlu, Ozel, Ye, & Kim, 2011). The question then becomes what might PK-12 schools do to improve teachers’ and students’ STEM knowledge and skills? This book will look at equity and access issues in STEM education from PK-12, university, and administrative and policy lenses.

math learning center wsu: *Connecting High-Quality Educators with Urban Students* Sharon Hartin Iorio, 2017-09-18 Recent national attention has focused on the benefits of school-university-community partnerships to increase the pipeline of highly qualified teachers for urban students, but little has been published about large-scale partnerships. This book about one urban teacher education partnership is written for those who want to plan, direct, work in, or study a full-scale, pre-K-12 school, university, and community partnership. The book offers a comprehensive approach to urban teacher education. Topics cover (1) recruitment; (2) a large-scale Professional Development School model (e.g. 400 candidates per semester) and an early childhood residency graduate program (20 candidates per cohort)—two partnership programs embracing all

university preservice teacher candidates; (3) induction support for new teachers, and finally, (4) professional development for candidates and experienced, in-service teachers. Each of the six chapters show how the separate parts of teacher education can be interrelated to build a stronger, more cohesive, integrated system to serve teachers and ultimately Pre-K-12 students. A review and reflection on a single teacher education partnership, this easy-to-use book, is clearly documented by interviews, five-year evaluation outcomes, and a retrospective analysis that embraces sociocultural themes.

math learning center wsu: Convergence and Collaboration of Campus Information Services Ronald R. Powell, Peter Hernon, 2008-10-30 Convergence and collaboration enable an academic library to be more fully engaged with its campus. In its simplest form, convergence is defined as joint activities of a campus's units to further their shared mission of supporting teaching, learning, and inquiry. Convergence, which involves collaboration in both organizational structures and service delivery, leads to users benefiting from contact with individuals who have relevant expertise. Collaboration also may lead to convergence of collections, thereby enhancing library service to an institution's constituents. Specific examples of convergence/collaboration include centers for teaching excellence, tutor and writing centers, information arcades, facilities for multi-media production and delivery, information and learning commons, cafes, photocopying centers; centers for distance education, participation in the use of course management software (e.g., Blackboard) to make library resources available to classes digitally and to make students more information literate, publishing (e.g., university presses and digital collections, including institutional repositories), counseling and career centers, and services for students for whom English is a secondary language (mostly in community colleges). For anyone interested in how academic libraries can be more closely tied to the various missions of the colleges/universities in which they reside.

math learning center wsu: Faculty Development and Student Learning William Condon, Ellen R. Iverson, Cathryn A. Manduca, Carol Rutz, Gudrun Willett, 2016-02-15 Colleges and universities across the US have created special initiatives to promote faculty development, but to date there has been little research to determine whether such programs have an impact on students' learning. Faculty Development and Student Learning reports the results of a multi-year study undertaken by faculty at Carleton College and Washington State University to assess how students' learning is affected by faculty members' efforts to become better teachers. Extending recent research in the Scholarship of Teaching and Learning (SoTL) to assessment of faculty development and its effectiveness, the authors show that faculty participation in professional development activities positively affects classroom pedagogy, student learning, and the overall culture of teaching and learning in a college or university.

math learning center wsu: Preparing Middle Level Educators for 21st Century Schools Penny B. Howell, Shawn A. Faulkner, Jeanneine Jones, Jan Carpenter, 2018-05-01 Over the last decade, significant changes have occurred in how schools are organized, how educators are prepared and certified, how accreditation policies have shifted both curriculum and content, as well as changes to the demographics of middle school classrooms. This volume, Preparing Middle Level Educators for 21st Century Schools: Enduring Beliefs, Changing Times, Evolving Practices provides a review of current research focused on middle level educator preparation at all levels. Our enduring beliefs about young adolescents have not changed (e.g., need for developmentally responsive instruction, caring adults who understand them and are prepared to teach them, opportunities to explore their interests) but the political and sociocultural climate of schools and schooling has. In light of changing times, this volume allows researchers and teacher educators to share research from their context and inform the evolving practices of educator preparation for the middle level. The research

presented in this volume is organized into three sections, with an introduction provided for each. The authors grounded their work in the Association for Middle Level Education's teacher preparation standards (2012) and tenets of This We Believe (NMSA, 2010). By doing so, they examine topics that hold potential for meeting the learning needs of teachers and students in middle level schools. The first section includes chapters from individuals working to ensure that the enduring beliefs of middle level education continue to guide the structures of their middle level teacher preparation programs. The second set of chapters closely examines how changing times are shaping the work of teacher educators. Finally, the last section spotlights evolving practices that continue to develop in response to the changes impacting our classrooms, schools, and communities. This text provides readers with researched-based practices and information to help them continue the tradition of middle level teacher education. The enduring beliefs of preparing teachers who understand, respect, and honor the many talents, gifts, and contributions of the young adolescent student will guide teacher educators as they respond to the changing times of education and the evolving practices of teachers, teacher educators, and schools.
