math learning center wvu: Making Schools Work Cheryl L. Fagnano, 2019-03-11 Beginning with the fundamental and essential question, How do we improve schools? prominent education theorists and practitioners examine the imperative of education reform. They confront and analyze the pressing need for effective, systematic ways to improve education in order to ensure competent students and graduates, and they offer numerous innovative ideas and models for reform. The discussions in this book are the fruits of the 1992 Milken Family Foundation National Educator Awards Retreat. Committed to recognizing the contributions of educators, the annual conference advances professional development and celebrates—publicly—professional achievement. Addressed in this volume are such urgent and far-reaching issues as enrichment versus remedial strategies for at-risk students; educators' responses to extra-education demands; creative leadership among practitioners; and the crucial role of educator awards. Practitioners, policymakers, and anyone wanting to stay current with the state of American education will find this useful and valuable reading.

math learning center wvu: Liberating Learning Terry M. Moe, John E. Chubb, 2009-07-15 Praise for Liberating Learning Moe and Chubb have delivered a truly stunning book, rich with the prospect of how technology is already revolutionizing learning in communities from Midland, Pennsylvania to Gurgaon, India. At the same time, this is a sobering telling of the realpolitik of education, a battle in which the status quo is well defended. But most of all, this book is a call to action, a call to unleash the power of technological innovation to create an education system worthy of our aspirations and our childrens' dreams. Ted Mitchell, CEO of the New Schools Venture Fund As long as we continue to educate students without regard for the way the real world works, we will continue to limit their choices. In Liberating Learning, Terry Moe and John Chubb push us to ask the questions we should be asking, to have the hard conversations about how far technology can go to advance student achievement in this country. Michelle Rhee, Chancellor of Education for the Washington, D.C. schools A brilliant analysis of how technology is destined to transform America's schools for the better: not simply by generating new ways of learning, but also and surprisingly by unleashing forces that weaken its political opponents and open up the political process to educational change. A provocative, entirely novel vision of the future of American education. Rick Hanushek, the Paul and Jean Hanna Senior Fellow at the Hoover Institution, Stanford University Terry Moe and John Chubb, two long-time, astute observers of educational reform, see technology as the way to reverse decades of failed efforts. Technology will facilitate significantly more individualized student learning and perhaps most importantly, technology will make it harder and harder for the entrenched adult interests to block the reforms that are right for our kids. This is a provocative, informative and, ultimately, optimistic read, something we badly need in public education. Joel Klein, Chancellor of the New York City schools
