By analyzing the organizational structure, resources and identity of markets without middlemen, social and collective kitchens, organizations distributing food parcels, social clinics and self-managed cooperatives, this study explains the enlargement of boundaries of collective action in times of crisis.

medicine for the people festival: *The Halberd at Red Cliff* Xiaofei Tian, 2020-10-26 The turn of the third century CE—known as the Jian'an era or Three Kingdoms period—holds double significance for the Chinese cultural tradition. Its writings laid the foundation of classical poetry and literary criticism. Its historical personages and events have also inspired works of poetry, fiction, drama, film, and art throughout Chinese history, including Internet fantasy literature today. There is a vast body of secondary literature on these two subjects individually, but very little on their interface. The image of the Jian'an era, with its feasting, drinking, heroism, and literary panache, as well as intense male friendship, was to return time and again in the romanticized narrative of the Three Kingdoms. How did Jian'an bifurcate into two distinct nostalgias, one of which was the first paradigmatic embodiment of wen (literary graces, cultural patterning), and the other of wu (heroic martial virtue)? How did these largely segregated nostalgias negotiate with one another? And how is the predominantly male world of the Three Kingdoms appropriated by young women in contemporary China? *The Halberd at Red Cliff* investigates how these associations were closely related in their complex origins and then came to be divergent in their later metamorphoses.

medicine for the people festival: *They Came Before Columbus: The African Presence in Ancient America* Ivan Van Sertima, *They Came Before Columbus* reveals a compelling, dramatic, and superbly detailed documentation of the presence and legacy of Africans in ancient America. Examining navigation and shipbuilding; cultural analogies between Native Americans and Africans; the transportation of plants, animals, and textiles between the continents; and the diaries, journals, and oral accounts of the explorers themselves, Ivan Van Sertima builds a pyramid of evidence to support his claim of an African presence in the New World centuries before Columbus. Combining impressive scholarship with a novelist's gift for storytelling, Van Sertima re-creates some of the most powerful scenes of human history: the launching of the great ships of Mali in 1310 (two hundred

master boats and two hundred supply boats), the sea expedition of the Mandingo king in 1311, and many others. In *They Came Before Columbus*, we see clearly the unmistakable face and handprint of black Africans in pre-Columbian America, and their overwhelming impact on the civilizations they encountered.
