medical technology online programs: Revolutionizing Tropical Medicine Kerry Atkinson, Prof. David Mabey, 2019-08-27 A comprehensive resource describing innovative technologies and digital health tools that can revolutionize the delivery of health care in low- to middle-income countries, particularly in remote rural impoverished communities *Revolutionizing Tropical Medicine* offers an up-to-date guide for healthcare and other professionals working in low-resource countries where access to health care facilities for diagnosis and treatment is challenging. Rather than suggesting the expensive solution of building new bricks and mortar clinics and hospitals and increasing the number of doctors and nurses in these deprived areas, the authors propose a complete change of mindset. They outline a number of ideas for improving healthcare including rapid diagnostic testing for infectious and non-infectious diseases at a point-of-care facility, together with low cost portable imaging devices. In addition, the authors recommend a change in the way in which health care is delivered. This approach requires task-shifting within the healthcare provision system so that nurses, laboratory technicians, pharmacists and others are trained in the newly available technologies, thus enabling faster and more appropriate triage for people requiring medical treatment. This text: Describes the current burden of communicable and non-communicable diseases in low- to middle-income countries throughout the world Describes the major advances in healthcare outcomes in low-to middle-income countries derived from implementation of the United Nations/World Health Organisation's 2000 Millennium Development Goals Provides a review of inexpensive rapid diagnostic point-of-care tests for infectious diseases in low-resource countries, particularly for people living in remote rural areas Provides a review of other rapid point-of-care services for assessing hematological function, biochemical function, renal function, hepatic function and status including hepatitis, acid-base balance, sickle cell disease, severe acute malnutrition and spirometry Explores the use of low-cost portable imaging devices for use in remote rural areas including a novel method of examining the optic fundus using a smartphone and the extensive value of portable ultrasound scanning when x-ray facilities are not available Describes the use of telemedicine in the clinical management of both children and adults in remote rural settings Looks to the future of clinical management in remote impoverished rural settings using nucleic acid identification of pathogens, the use of nanoparticles for water purification, the use of drones, the use of pulse oximetry and the use of near-infrared spectroscopy Finally, it assesses the potential for future healthcare improvement in impoverished areas and how the United Nations/World Health Organization 2015 Sustainable Development Goals are approaching this. Written for physicians, infectious disease specialists, pathologists, radiologists, nurses, pharmacists and other health care workers, as well as government healthcare managers, *Revolutionizing Tropical Medicine* is a new up-to-date essential and realistic guide to treating and diagnosing patients in low-resource tropical countries based on new technologies.

medical technology online programs: Cognitive Benefits of Technologies Applied to Learning in Education Beatriz Peña-Acuña, Yolanda Navarro Abal, Pedro Román-Graván, Pedro Tadeu, Manuel León-Urrutia, Javier Ávila-López , Rafael Crismán Crismán Pérez, Carmen M. Toscano-Fuentes, Carmen María Martín Del Pino, 2025-03-12 In general, scientific inquiry about the benefits of digital gadgets focused on learning at all stages of Education is providing cognitive, affective, and attitudinal variables. However, cognitive effects stand out among these effects. In this topic of inquiry that we propose, we intend to investigate the phenomenon from a simple discipline

to a multidisciplinary point of view, that is, from interventions that work transversally on some transversal theme in different disciplines or with a review approach from various points of view. We also propose it to deepen the phenomenon with interventions that are investigated from an interdisciplinary perspective, taking into account the qualitative and/or quantitative study of a variable from one discipline and another variable from another discipline. Likewise, other studies of the cognitive effects of technologies in learning with paradigms or innovative approaches and evaluation of more complex interventions can be considered. We are in a moment of transition from the use of analogue materials to digital tools (platforms, applications, gadgets, tablets, mobiles, etc.) and advanced technology formats (immersive realities and artificial intelligence). This is a moment of technological transformation in which the benefits of new technologies in learning are beginning to be investigated both in interventions with grouping in individual perspective or in an interactive and collaborative perspective among equals. It also coincides with the development of neuroscience and psychology applied to Education. This research topic aims to contribute to deepen this topic and provide a global vision. It also intends to indicate to what extent the development of the cognitive is relevant, as well as to extend the variables that must be considered.
