Types of Pre Employment Assessment Tests

Pre employment assessment tests come in various forms, each designed to evaluate different candidate competencies and attributes. Employers select specific test types based on the job requirements to ensure a targeted and effective evaluation. Recognizing the various types helps candidates anticipate the nature of questions they might face and prepare accordingly.

Cognitive Ability Tests

Cognitive ability tests assess a candidate's general mental capabilities, including problem-solving, logical reasoning, and verbal and numerical aptitude. These tests often include questions that measure critical thinking, pattern recognition, and data interpretation skills which are vital for many roles.

Personality and Behavioral Tests

These assessments evaluate traits such as motivation, interpersonal skills, and emotional intelligence. Personality tests help predict how well a candidate fits within a company's culture and how they might behave in workplace scenarios.

Skills and Knowledge Tests

Skills tests focus on specific abilities related to the job, such as typing speed, technical knowledge, or industry-specific expertise. Knowledge tests assess familiarity with the essential concepts and practices pertinent to the role.

Situational Judgment Tests (SJT)

SJTs present hypothetical work-related situations and ask candidates to select or rank the most appropriate responses. These tests evaluate decision-making, judgment, and problem-solving skills in practical contexts.

Physical Ability Tests

For roles requiring physical exertion, these tests measure strength, endurance, and agility. They ensure candidates can safely perform the physical tasks involved in the job.

Common Pre Employment Test Questions and Answers

Understanding typical questions and their best answers can help candidates prepare strategically for pre employment assessments. Below are examples from different test categories along with explanations to clarify the reasoning behind the correct responses.

Cognitive Ability Questions

Example Question: What is the next number in the sequence: 2, 6, 12, 20, 30?

Answer: 42. The pattern adds consecutive even numbers: +4, +6, +8, +10, so $30 + 12 = 42$.

Personality Test Questions

Example Question: I prefer working:

- Alone on tasks
- In a team environment
- With minimal supervision

Answer: There is no strictly right or wrong answer; responses should honestly reflect the candidate's work style to ensure a good fit with the role and company culture.

Skills Test Questions

Example Question: In Microsoft Excel, which function would you use to find the average of a range of cells?

Answer: The AVERAGE() function.

Situational Judgment Questions

Example Question: If two colleagues are disagreeing on a project approach, what would you do?

Answer: Options typically include mediating the discussion, suggesting a compromise, or escalating to a manager. The best answer usually involves promoting collaboration and constructive resolution.
