Understanding the Concept of "Prefer" in Sign Language

In sign language, conveying abstract concepts such as preference requires specific gestures that represent choice, liking, or favoring one option over another. The concept of "prefer" is fundamental to expressing personal opinions and making decisions. It involves not only the sign itself but also facial expressions and body language to emphasize the degree of preference. Sign languages, like spoken languages, have unique ways to communicate this idea, often through verbs or phrases that indicate favoring one thing compared to others. Recognizing how "prefer" fits within the broader lexicon of signs related to likes, dislikes, and choices is crucial for effective communication.

Importance of Preference in Communication

Expressing preference is vital in daily interactions as it helps clarify decisions, negotiate options, and establish individual tastes. In sign language, this expression supports social interactions, educational settings, and professional environments by allowing users to communicate their choices clearly and respectfully.

Variations Across Different Sign Languages

While this article focuses primarily on American Sign Language (ASL), it is important to acknowledge that other sign languages, such as British Sign Language (BSL), Auslan, and others, have their unique signs for "prefer." These variations reflect cultural and linguistic differences and highlight the diversity within the global Deaf community.

How to Sign "Prefer" in American Sign Language (ASL)

In American Sign Language, "prefer" is typically signed by combining specific hand shapes and movements that indicate choice or favoring one option over another. The sign emphasizes the personal decision-making process and is often accompanied by a facial expression that conveys liking or favoring.

Step-by-Step Guide to Signing "Prefer" in ASL

To sign "prefer" in ASL, follow these steps:

1. Start with both hands open and palms facing upward in front of you.
2. Move one hand slightly forward and place it over the other hand, which remains stationary.
3. Simultaneously, slightly tilt your head or raise your eyebrows to indicate preference.
4. The movement suggests placing one option above another, symbolizing preference.

Alternative Method Using the Sign for "Like"

Another common method to express preference is by using the sign for "like" combined with clarifying phrases or context. For example, signing "I like this better" can effectively communicate preference without a specific sign for "prefer."

Synonyms and Related Signs for "Prefer"

In addition to the direct sign for "prefer," American Sign Language users frequently employ related signs to express similar ideas, enhancing communication flexibility.

Common Synonyms

- **Like:** A fundamental sign used to indicate general liking or enjoyment.
- **Choose:** Signifies making a selection, often used when expressing preference among alternatives.
- **Favorite:** Expresses a strong preference or top choice among options.
- **Want:** Indicates desire, sometimes used to imply preference.

Using These Signs in Context

Combining these related signs with facial expressions and body language can provide nuanced meaning. For example, signing "choose" followed by "this" with a confident facial expression can effectively communicate a clear preference.

Contextual Usage of Preference Signs

Understanding when and how to use "prefer" and related signs is essential for accurate and respectful communication. Context influences the choice of signs and the accompanying non-manual signals.

Formal vs. Informal Settings

In formal settings such as education or workplace communication, clarity and precision are paramount. Using the standard sign for "prefer" or combining "choose" with additional explanation ensures the message is understood. Informally, users may rely more on expressive facial cues and simpler signs like "like" or "want."

Cultural Sensitivity and Non-Manual Signals

Facial expressions, head tilts, and body posture are integral in sign language communication, especially when expressing preferences. These non-manual markers can strengthen or soften the preference being communicated and should be used thoughtfully to respect cultural norms within the Deaf community.

Tips for Learning and Practicing Preference Signs

Mastering the sign for "prefer" and related expressions requires consistent practice and exposure to authentic sign language environments.

Strategies for Effective Learning

- **Use Visual Resources:** Watching videos or attending sign language classes helps reinforce correct hand shapes and movements.
- **Practice with Native Signers:** Interaction with fluent signers provides real-world context and feedback.
- **Incorporate Non-Manual Signals:** Pay attention to facial expressions and body language as part of the signing process.
- **Expand Vocabulary:** Learn synonyms and related signs to express preferences in various ways.
- **Consistent Review:** Regularly review and practice to build muscle memory and confidence.

Common Challenges and Solutions

Some learners may struggle with coordinating hand movements and non-manual signals simultaneously. Breaking down the sign into components and practicing each separately before combining them can help overcome these difficulties.

prefer in sign language: *Sign Languages and Linguistic Citizenship* Ellen Foote, 2020-12-30 This critical ethnographic account of the Yangon deaf community in Myanmar offers unique insights into the dynamics of a vibrant linguistic and cultural minority community in the region and also sheds further light on broader questions around language policy. The book examines language policies on different scales, demonstrating how unofficial policies in the local deaf school and wider Yangon deaf community impact responses to higher level interventions, namely the 2007 government policy aimed at unifying the country's two sign languages. Foote highlights the need for a critical and interdisciplinary approach to the study of language policy, unpacking the interplay between language ideologies, power relations, political and moral interests and community conceptualisations of citizenship. The study's findings are situated within wider theoretical debates within linguistic anthropology, questioning existing paradigms on the notion of linguistic authenticity and contributing to ongoing debates on the relationship between language policy and social justice. Offering an important new contribution to critical work on language policy, the book will be of particular interest to students and scholars in sociolinguistics, linguistic anthropology and language education.

prefer in sign language: Language Acquisition By Eye Charlene Chamberlain, Jill P. Morford, Rachel I. Mayberry, 1999-08-01 This book focuses on the early acquisition of signed languages and the later development of reading by children who use signed languages. It represents the first collection of research papers focused solely on the acquisition of various signed languages by very young children--all of whom are acquiring signed languages natively, from deaf parents. It is also the first collection to investigate the possible relationships between the acquisition of signed language and reading development in school-aged children. The underlying questions addressed by the chapters are how visual-gestural languages develop and whether and how visual languages can serve the foundation for learning a second visual representation of language, namely, reading. Language Acquisition by Eye is divided into two parts, anchored in the toddler phase and the school-pupil phase. The central focus of Part I is on the earliest stages of signed language acquisition. The chapters in this part address important questions as to what babytalk looks like in signed language and the effect it has on babies' attention, what early babbling looks like in signed language, what babies' earliest signs look like, how parents talk to their babies in signed language to ensure that their babies see what's being said, and what the earliest sentences in signed languages tell us about the acquisition of grammar. With contrasting research paradigms, these chapters all show the degree to which parents and babies are highly sensitive to one another's communicative interactions in subtle and complex ways. Such observations cannot be made for spoken language acquisition because speech does not require that the parent and child look at each other during communication whereas signed language does. Part II focuses on the relationship between signed language acquisition and reading development in children who are deaf. All of these chapters report original research that investigates and uncovers a positive relationship between the acquisition and

knowledge of signed language and the development of reading skills and as a result, represents a historical first in reading research. This section discusses how current theory applies to the case of deaf children's reading and presents new data that illuminates reading theory. Using a variety of research paradigms, each chapter finds a positive rather than a negative correlation between signed language knowledge and usage, and the development of reading skill. These chapters are sure to provide the foundation for new directions in reading research.
