prestige care cna training: Malaria on the Move Kundai Manamere, 2025-04-01 Malaria on the Move explores the socioeconomic aspects of endemic malaria in the southeastern lowveld of Zimbabwe. The book provides a historical analysis of malaria control and eradication programs in Rhodesia and independent Zimbabwe from the late nineteenth century to 2015. Kundai Manamere draws connections between malaria epidemiology and human mobility relating to large- and small-scale farming, labor migration, colonial displacement, war, and rural-to-urban movements. She examines how circular labor migration and rural travel influence the risk of malaria for individuals and communities and shows how migration and travel have spread the disease and impeded control efforts. More importantly, the book demonstrates that the need to travel for work is an indicator of a local hierarchy of priorities. It reaffirms the urgent need for partners in malaria control to consider local socioeconomic factors in the design and implementation of intervention programs. The inclusion of local contexts, perspectives, and voices in formulating national and global public health policies and interventions is critical to addressing public noncooperation. To date, biomedical studies of malaria outnumber socioeconomic and political studies of the disease. Manamere advocates for a multipronged approach that goes beyond standard scientific research methods. Her approach incorporates how socioeconomic considerations of recipient communities influence malaria epidemiology, local perceptions of the disease, and responses to interventions. This context is particularly important for understanding why malaria has remained a global health challenge and why so many interventions have failed. Scientifically, malaria is a disease of the landscape, and its ecological complexity poses challenges to its eradication. Yet biological and ecological landscapes are not exclusive factors in the spread of disease; as Manamere demonstrates, the socioeconomic environment is equally important.

prestige care cna training: Immigrant Women Workers in the Neoliberal Age Nilda Flores-Gonzalez, Anna Romina Guevarra, Maura Toro-Morn, Grace Chang, 2013-07-01 To date, most research on immigrant women and labor forces has focused on the participation of immigrant women on formal labor markets. In this study, contributors focus on informal economies such as health care, domestic work, street vending, and the garment industry, where displaced and undocumented women are more likely to work. Because such informal labor markets are unregulated, many of these workers face abusive working conditions that are not reported for fear of job loss or deportation. In examining the complex dynamics of how immigrant women navigate political and economic uncertainties, this collection highlights the important role of citizenship status in defining immigrant women's opportunities, wages, and labor conditions. Contributors are Pallavi Banerjee, Grace Chang, Margaret M. Chin, Jennifer Jihye Chun, Héctor R.
