These models distinguish between qualitatively different modes of information processing in making decisions and

solving problems (e.g., associative versus rule-based, controlled versus uncontrolled, and affective versus cognitive modes). Leading contributors review the basic assumptions of these approaches and review the ways they have been applied and tested in such areas as attitudes, stereotyping, person perception, memory, and judgment. Also examined are the relationships between different sets of processing modes, the factors that determine their utilization, and how they work in combination to affect responses to social information.

princeton university phd psychology: The Nobel Memorial Laureates in Economics Howard R. Vane, Chris Mulhearn, 2005 . . . this book will continue to share shelf-space next to my current textbooks. As a librarian, such utility makes this a desirable addition to any educator's collection. As a history of economic thought book, Vane and Mulhearn have brought together a breadth of information that can be found through disparate sources but at a cost of effort and, especially for students, qualitative decisions regarding sources. . . The convenience of their starting methodology, breadth over depth coverage, and clear intention of writing to an audience of students makes this a useful text. Kirk Douglas Johnson, *Journal of the History of Economic Thought* The essays summarizing the main achievements of the prize winners are well written and to the point. They are short enough that they never cause the reader to lose interest, but substantive enough to let you know what the winners' accomplishments amount to. These compact, factually accurate essays mark the real value of the book as a reference work. . . there is little for which to fault the authors. Vane and Mulhearn have done a very nice job with the book, and it is an added bonus that it includes a formal portrait photograph of each prize winner. Bradley W. Bateman, *History Political Economy* . . . Vane and Mulhearn have produced a useful reference work. John Quiggin, *Economic Analysis and Policy* This collection has the capacity to surprise the reader. You learn all sorts of new and sometimes admirable things about these economists and about the richness of the profession that is often obscured from students of the subject. John Lodewijks, *History of Economics Review* This volume provides a non-technical description of the main published works of every Nobel Memorial (Economics) winner from the first annual award in 1969 to 2004 . . . This is a reference book par excellence . . . it will interest not only those having some involvement with economics, past or present, but it should also attract more general readers wanting to unravel some of the mysteries surrounding economics and economists. *Economic Outlook and Business Review* Vane and Mulhearn have produced an introduction to the careers and major publications of the 55 economists awarded the Bank of Sweden Prize in Economic Sciences in Memory of Alfred Nobel between 1969 and 2004. The short essays on each economist are readable and accurate; they provide a discussion of the subjects, major contributions and an introduction to the secondary literature, often with the outstanding reports on the laureates' work provided to the Economic Prize Committee of the Royal Swedish Academy of Sciences. The collection is introduced with a review of the prize and the common characteristics of the winners thus far, all neatly summarized in a table with each laureate's year and country of birth, university, year of first and higher degrees, affiliation at the time of the award, field of study, and a summary citation. This volume provides a very useful introduction to the development of economic ideas in the last three-quarters of the 20th century. Highly recommended. D.E. Moggridge, *Choice* Every serious research economist will want to have a look at this comprehensive work. Edwin Burmeister, Research Professor of Economics, Duke University, US The award of the Nobel Prize has, for more than thirty years, been economists' way of informing the public at large about what work most of them think is important, and about who has done it. Anyone seeking to understand the development of recent economic ideas and the profession that has created them must deal with the Prize's history, and Vane and Mulhearn have provided an indispensable guide to it brief, readable and accurate. David Laidler, Professor Emeritus and Bank of Montreal Professor, University of Western Ontario, Canada This is a splendid account of the personal stories of the Nobel Laureates in Economics, the diversity of practice of recent economists, and, perhaps above all, the nature of

princeton university phd psychology: *Race, Culture, Psychology, and Law* Kimberly

Barrett, William George, 2005 In a diverse democracy, law must be open to all. All too often, however, our system of justice has failed to live up to our shared ideals, because it excludes individuals and communities even as they seek to use it or find themselves caught up in it. The research presented here offers hope. The abstract doctrines of the law are presented through real cases. Judges, lawyers, scholars, and concerned citizens will find much in these pages documenting the need for reform, along with the means for achieving our aspirations. The issues presented by race, ethnicity, and cultural differences are obviously central to the resolution of disputes in a nation made up of people who have in common only their faith in the great experiment of the United States Constitution. Here the challenges are met in an original, accessible, and thoughtful manner. -Frank H. Wu, Howard University, and author of *Yellow: Race in America Beyond Black and White*

Kim Barrett and William George have taken on an enormous task, which is matched only by its timeliness. Cultural competence and cultural diversity pass off our lips as eternally valued ideals, but Barrett and George have brought a critical and edifying eye to these ideas. Racism is similarly easy to acknowledge but difficult to account for in the everyday lives of ordinary people of color. What we discover in this impressive volume is not only that race and culture matter, but how they matter in the minds of people who are clients and the minds of people who attempt to serve them and in the courts of law that attempt to mete out justice. *Race, Culture Psychology and the Law* is essential reading for anyone with a professional or personal interest in social justice and psychological well-being. -James M. Jones, Ph.D., Director, Minority Fellowship Program, American Psychological Association

This is an extraordinary and daring compilation of cutting edge commentaries that should prove invaluable to students, scholars, and practitioners working in social work, clinical and forensic psychology, juvenile justice, immigration adjustment, Native American advocacy, and child and adult abuse. It is a quality text that tackles key topics bridged by psychology and the law with clarity, succinctness, complexity, and evenhandedness. -William E. Cross, Jr., Ph.D., Graduate Center, City University of New York

American ethnic and racial minority groups, immigrants, and refugees to this country are disparately impacted by the justice system of the United States. Issues such as racial profiling, disproportionate incarceration, deportation, and capital punishment all exemplify situations in which the legal system must attend to matters of race and culture in a competent and humane fashion. *Race, Culture, Psychology, and Law* is the only book to provide summaries and analyses of culturally competent psychological and social services encountered within the U.S. legal arena. The book is broad in scope and covers the knowledge and practice crucial in providing comprehensive services to ethnic, racial, and cultural minorities. Topics include the importance of race relations, psychological testing and evaluation, racial profiling, disparities in death penalty conviction, immigration and domestic violence, asylum seekers, deportations and civil rights, juvenile justice, cross-cultural lawyering, and cultural competency in the administration of justice. *Race, Culture, Psychology, and Law* offers a compendium of knowledge, historical background, case examples, guidelines, and practice standards pertinent to professionals in the fields of psychology and law to help them recognize the importance of racial and cultural contexts of their clients. Editors Kimberly Holt Barrett and William H. George have drawn together contributing authors from a variety of academic disciplines including law, psychology, sociology, social work, and family studies. These contributors illustrate the delivery of psychological, legal, and social services to individuals and families-from racial minority, ethnic minority, immigrant, and refugee groups-who are involved in legal proceedings. *Race, Culture, Psychology, and Law* is a unique and timely text for undergraduate and graduate students studying psychology and law. The book is also a vital resource for a variety of professionals such as clinical psychologists, forensic psychologists, psychiatrists, counselors, social workers, and attorneys dealing with new immigrants and people from various ethnic communities.

In addition to presenting key concepts and formulas, the volume covers established and emerging applications and discusses recurrent challenges that require additional research.
