surpass behavioral health greenville sc: **The Integrated Behavioral Health Continuum** Laurel J. Kiser, Paul M. Lefkovitz, Lawrence L. Kennedy, 2008-11-01 Until recently, behavioral health was defined within the strict dichotomy of inpatient and outpatient care -- a dichotomy that failed to mirror the range and complexity of human experience and clinical needs. Today's integrated system renders this dichotomy obsolete. Instead, service delivery integration processes offer an organized system of care rooted in a common vision and defined by processes intended to promote continuity and quality of care, coordination of efforts, efficiencies of operation, and seamless patient movement through an otherwise bewildering array of health care services. Unique in the literature, this volume brings together distinguished clinicians and policymakers who focus on the operational aspects of developing state-of-the-art integrated delivery systems. History and concept -- Why we need integrated health care delivery systems, including a model of service delivery integration that incorporates current barriers (e.g., ambiguous roles and responsibilities and lack of strategic alignment; how to design integrated delivery systems improving clinical outcomes, achieving fiscal and operating efficiencies, and aligning clinical and fiscal incentives) Structural foundations -- Access to the system of care for patients, payors, and employers; how to design level-of-care criteria; eight strategies that help clients move along the continuum; how to define level of care in today's managed care world; and the process of following therapeutic processes (i.e., philosophies, procedures, and practices used to create or support recovery and wellness) across the continuum Administrative and management processes -- How to reorient staff toward minimizing barriers and making the patient central to the system; documentation/information management and reimbursement (rates and rate structures, risk assumption); current research and its enormous potential to improve every aspect of care; quality assessments based on examining the driving forces behind the needs for monitoring and evaluating quality and outcomes; and the relation of behavioral health care systems, which seek to fully integrate clients and families into the fabric of their community and culture, to other systems A case vignette that highlights -- from the consumer's viewpoint -- the vital role of self-help during an episode of hospitalization and a discussion of future directions in integrated behavioral health care round out this remarkable volume. With its wealth of strategic and nuts and bolts information -- useful for alliances and single entities alike -- on how to harness operational forces in establishing an effective integrated behavioral health continuum, this volume will be welcomed by those who deliver direct services (psychiatric professionals) and those who administer and manage the integrated financing and delivery of quality care from public (U.S. government agencies) and private (managed care and insurance providers) sectors alike.

surpass behavioral health greenville sc: The Primary Care Toolkit Larry James, William O'Donohue, 2010-10-29 Integrated care is receiving a lot of attention from clinicians, administrators, policy makers, and researchers. Given the current healthcare crises in the United States, where costs, quality, and access to care are of particular concern, many are looking for new and better ways of delivering behavioral health services. Integrating behavioral health into primary care medical settings has been shown to: (1) produce healthier patients; (2) produce medical savings; (3) produce higher patient satisfaction; (4) leverage the primary care physician's time so that they can be more productive; and (5) increase physician satisfaction. For these reasons this is an emerging paradigm with a lot of interest and momentum. For example, the President's New Freedom Commission on Mental Health has recently endorsed redesigning the mental health system so that much of this is integrated into primary care medicine.

surpass behavioral health greenville sc: *Integrated Behavioral Healthcare* William T. O'Donohue, Nicholas A. Cummings, Michael A. Cucciare, 2006 Integrated behavioral health care is a health-care service delivery system in which behavioral health care is coordinated with primary medical care. Unlike older approaches to patient care in which mental health professionals worked separately from medical professionals, integrated care recognizes that many patients present to medical professionals with behavioral problems. For example, diabetics or persons suffering from chronic pain may experience depression. Thus patients often need some combination of both behavioral and medical treatment. Integrated care attempts to overcome the traditional division of care so that a coordinated, multidisciplinary approach is taken to provide more appropriate care for patients. In this comprehensive, step-by-step guide, a team of national experts in integrated behavioral health care discusses the economic, clinical, administrative, and procedural issues involved in designing, implementing, and maintaining a successful integrated care delivery system. Among the specific topics discussed are psychopharmacology; the Biodyne model (focused, intermittent psychotherapy throughout the life cycle); guidelines for the treatment of major depression, panic disorder, substance abuse, and attention-deficit/hyperactivity disorder; disease management groups; treatment adherence; patient access to behavioral health care through the primary care provider; and treating special problems related to the elderly and women's health care. This clearly written, well-organized, and thoroughly researched guidebook will be of great interest to researchers and practitioners in psychology, medicine, nursing, social work, psychiatry, and education.
