Services and Treatment Options

Swanson Schaack Physical Therapy offers a diverse range of services designed to address various physical impairments and injuries. These services are tailored to meet the specific needs of each patient, ensuring effective and personalized rehabilitation.

Orthopedic Rehabilitation

Orthopedic rehabilitation is a core service that focuses on recovery from musculoskeletal injuries such as fractures, ligament tears, and post-surgical rehabilitation. The clinic provides targeted exercises, manual therapy, and modalities to reduce inflammation and restore strength.

Sports Injury Therapy

For athletes, Swanson Schaack Physical Therapy delivers specialized sports injury management, helping patients recover from strains, sprains, and overuse injuries. The treatments aim to enhance performance while minimizing the risk of future injuries.

Neurological Rehabilitation

Patients with neurological conditions such as stroke, multiple sclerosis, or Parkinson's disease receive customized therapy plans that focus on improving motor control, balance, and coordination. The clinic employs neurorehabilitation techniques to maximize functional independence.

Post-Surgical Recovery

Post-operative patients are supported through structured rehabilitation

protocols that facilitate healing and regain mobility. Swanson Schaack Physical Therapy collaborates closely with surgeons and healthcare providers to ensure seamless care transitions.

Chronic Pain Management

The clinic also offers interventions for chronic pain conditions, including back pain, arthritis, and fibromyalgia. Treatment plans incorporate pain relief strategies and functional restoration to improve daily living activities.

Therapeutic Approaches and Techniques

Swanson Schaack Physical Therapy utilizes a blend of traditional and innovative treatment modalities to deliver optimal patient outcomes. The approach is rooted in evidence-based practice and continuous clinical evaluation.

Manual Therapy

Manual therapy techniques such as joint mobilization, soft tissue massage, and myofascial release are employed to reduce pain, increase range of motion, and promote tissue healing. Skilled hands-on treatment is central to many rehabilitation plans.

Therapeutic Exercise

Customized exercise programs are designed to restore strength, flexibility, and endurance. These include stretching, strengthening, balance training, and functional activities aligned with patient goals.

Modalities and Technologies

Advanced modalities such as ultrasound, electrical stimulation, and cold laser therapy support tissue repair and pain relief. Swanson Schaack Physical Therapy integrates these technologies as adjuncts to hands-on care and exercise.

Patient Education

Education plays a vital role in empowering patients to manage their conditions independently. Therapists provide guidance on posture, ergonomics, injury prevention, and home exercise programs to sustain improvements.

Patient Experience and Care Philosophy

Patient-centered care is a hallmark of Swanson Schaack Physical Therapy. The clinic fosters a supportive environment where individualized attention and clear communication are prioritized.

Initial Evaluation and Assessment

The rehabilitation process begins with a thorough evaluation to identify underlying issues and functional limitations. This assessment forms the basis of a personalized treatment plan tailored to each patient's needs.

Goal-Oriented Treatment

Therapy goals are collaboratively established, focusing on realistic and measurable outcomes. Progress is regularly monitored, and interventions are adjusted to ensure continuous improvement.

Supportive Environment

Swanson Schaack Physical Therapy promotes a welcoming atmosphere where patients feel comfortable and motivated. The clinical staff is dedicated to providing compassionate care throughout the recovery journey.

swanson schaack physical therapy: Implications of Psychologically Informed Physical Therapy on Patients with Chronic Pain and Psychosocial Factors Caroline Kennedy, Christian Morini, Genna Swanson, 2018 ABSTRACT: Background: Patients with chronic pain often present to physical therapy clinics with psychosocial factors including depression and fear-avoidance which impede their physical performance in daily life. Psychologically informed physical therapy (PIP) aims to address these psychosocial factors as they pertain to the physical impairments of the patient. The purpose of this review is to assess the effectiveness of PIP on patients with chronic pain and psychosocial risk factors. Method: A literature review was performed from September 2016 to April 2018 using the databases Pubmed, CINAHL, MEDLINE Complete, and PEDro. Inclusion criteria consisted of an adult population, the English language, retrieved from a peer-reviewed journal, chronic pain lasting greater than 12 weeks, psychosocial risk factors, PIP intervention and functional outcome measures of quality of life (QOL) or pain. Exclusion criteria consisted of studies in which the interventions of PIP were administered by untrained physical therapists, or the treatment was applied from someone other than a physical therapist. Results: Final search strings yielded 48 articles for review; 6 articles were selected to aide in the clinical decision, with one case report not used as there was mismatch between case subject and the patient case inspiring this research effort. Therefore, 5 articles were used for final appraisal to help guide the clinical decision process. Discussion/Conclusion: Based on current literature, PIP is an effective approach to intervention for a patient with chronic pain and psychosocial factors as it has been shown to improve selfreported function, QOL and pain level. Techniques such as graded exposure, activity pacing, and cognitive restructuring are useful to use as therapeutic interventions in addressing the psychosocial components of chronic pain.

swanson schaack physical therapy: *Physical Therapy Management of Patients with Spinal Pain* Deborah Stetts, Gray Carpenter, 2024-06-01 In this rapidly changing health care environment, a challenge today's physical therapist faces is finding, evaluating, and implementing current best evidence into practice, an integral part of health care professional educational programs. With that goal in mind, *Physical Therapy Management of Patients With Spinal Pain: An Evidence-Based Approach* provides a comprehensive research-based overview of the examination and physical therapy interventions of the spine. Inside *Physical Therapy Management of Patients With Spinal Pain*, Drs. Deborah M. Stetts and J. Gray Carpenter evaluate the current evidence related to spinal pain and present it in a format that allows for an easy transition to the clinical environment. By providing effective clinical interventions, rather than relying on habits or tradition, patients benefit from an increased likelihood of improved quality of life with the least potential of personal and financial risk. Some features include: • Over 650 photographs, images, and tables • Access to a supplemental video Website with new book purchase • Best practice for evaluating and treating the lumbar spine, thoracic spine, and cervical spine • Comprehensive coverage of the clinical presentation of spine-related pathologies from evaluation to treatment Each chapter outlines the history, physical examination, physical therapy diagnosis, evidence-based management guidelines, and case studies for each topic. Case studies will challenge the reader's clinical reasoning skills with the use of current best evidence throughout the initial examination and subsequent treatment sessions. Bonus! Also included with *Physical Therapy Management of Patients With Spinal Pain* is access to a supplemental Website containing more than 375 video demonstrations corresponding to

the tests and measures, examination, evaluation, and intervention procedures covered within the text. **Physical Therapy Management of Patients With Spinal Pain: An Evidence-Based Approach** is the go-to reference text and accompanying Web site for the physical therapy students, or clinicians who are reaching for best practice through providing the highest level of evidence-informed care in the evaluation and management of patients with spinal pain.
