sweet medicine cheyenne predictions: White Man's Water Erica Prussing, 2011-08-01 In recent years, efforts to recognize and accommodate cultural diversity have gained some traction in the politics of US health care. But to date, anthropological perspectives have figured unevenly in efforts to define and address mental health problems. Particularly challenging are examinations of Native peoples' experiences with alcohol. Erica Prussing provides the first in-depth assessment of the politics of Native sobriety by focusing on the Northern Cheyenne community in southeastern Montana, where for many decades the federally funded health care system has relied on the Twelve Step program of Alcoholics Anonymous. *White Man's Water* provides a thoughtful and careful analysis of Cheyenne views of sobriety and the politics that surround the selective appeal of Twelve Step approaches despite wide-ranging local critiques. Narratives from participants in these programs debunk long-standing stereotypes about "Indian drinking" and offer insight into the diversity of experiences with alcohol that actually occur among Native North Americans. This critical ethnography employs vivid accounts of the Northern Cheyenne people to depict how problems with alcohol are culturally constructed, showing how differences in age, gender, and other social features can affect involvement with both drinking and sobriety. These testimonies reveal the key role that gender plays in how Twelve Step program participants engage in a selective and creative process of appropriation at Northern Cheyenne, adapting the program to accommodate local cultural priorities and spiritual resources. The testimonies also illuminate community reactions to these adaptations, inspiring deeper inquiry into how federally funded health services are provided on the reservation. This book will appeal to readers with an interest in Native studies, ethnography, women's studies, and medical anthropology. With its critical consideration of how cultural context shapes drinking and sobriety, *White Man's Water* offers a multivocal perspective on alcohol's impact on health and the cultural complexities of sobriety.

Henrietta Mann, 1997 *Cheyenne-Arapaho Education, 1871-1982* is Henrietta Mann's powerful and moving account of the educational experiences of the two tribes during this long and painful period. sweet medicine cheyenne predictions: Spirits of Blood, Spirits of Breath Barbara Alice Mann, 2016-01-06 Before invasion, Turtle Island-or North America-was home to vibrant cultures that shared long-standing philosophical precepts. The most important and wide-spread of these was the view of reality as a collaborative binary known as the Twinned Cosmos of Blood and Breath. This binary system was built on the belief that neither half of the cosmos can exist without its twin. Both halves are, therefore, necessary and good. Western anthropologists typically shorthand the Twinned Cosmos as Sky and Earth but this erroneously saddles it with Christian baggage and, worse, imposes a hierarchy that puts sky quite literally above earth. None of this Western ideology legitimately applies to traditional Indigenous American thought, which is about equal cooperation and the continual recreation of reality. *Spirits of Blood, Spirits of Breath* examines traditional historical concepts of spirituality among North American Indians both at and, to the extent it can be determined, before contact. In doing so, Barbara Alice Mann rescues the authentically indigenous ideas from Western, and especially missionary, interpretations. In addition to early European source material, she uses Indian oral traditions, traced as much as possible to their earliest versions and sources, and Indian records, including pictographs, petroglyphs, bark books, and wampum. Moreover, Mann respects each Indigenous culture as a discrete unit, rather than generalizing them as is often done in Western anthropology. To this end, she collates material in accordance with

actual historical, linguistic, and traditional linkages among the groups at hand, with traditions clearly identified by group and, where recorded, by speaker. In this way she provides specialists and non-specialists alike a window into the purportedly lost, and often caricatured, world of Indigenous American thought.

sweet medicine cheyenne predictions: Archaeology, History, and Custer's Last Battle Richard A. Fox, 2015-02-16 On the afternoon of June 25, 1867, an overwhelming force of Sioux and Cheyenne Indians quickly mounted a savage onslaught against General George Armstrong Custer's battalion, driving the doomed troopers of the U.S. Seventh Cavalry to a small hill overlooking the Little Bighorn River, where Custer and his men bravely erected their heroic last stand. So goes the myth

of the Battle of the Little Bighorn, a myth perpetuated and reinforced for over 100 years. In truth, however, Custer's Last Stand was neither the last of the fighting nor a stand. Using innovative and standard archaeological techniques, combined with historical documents and Indian eyewitness accounts, Richard Allan Fox, Jr. vividly replays this battle in astonishing detail. Through bullets, spent cartridges, and other material data, Fox identifies combat positions and tracks soldiers and Indians across the Battlefield. Guided by the history beneath our feet, and listening to the previously ignored Indian testimonies, Fox reveals scenes of panic and collapse and, ultimately, a story of the Custer battle quite different from the fatalistic versions of history. According to the author, the five companies of the Seventh Cavalry entered the fray in good order, following planned strategies and displaying tactical stability. It was the sudden disintegration of this cohesion that caused the troopers' defeat. The end came quickly, unexpectedly, and largely amid terror and disarray. Archaeological evidences show that there was no determined fighting and little firearm resistance. The last soldiers to be killed had rushed from Custer Hill.
