The generative questions for this collection are: what if we locate education in doing and becoming rather than being? And, how does associating education with matter, multiplicity and relationality change how we think about agency, ontology and epistemology? This collection foregrounds cutting edge educational research that works to trouble the binaries between theory and methodology. It demonstrates new forms of feminist ethics and response-ability in research practices, and offers some coherence to this new area of research. This volume will provide a vital reference text for educational researchers and scholars interested in this burgeoning area of theoretically informed methodology and methodologically informed theory. The chapters in this book were originally published as articles in Taylor & Francis journals.

Taken together, the implementation of common college and career standards, the shift to next generation assessments, the availability of affordable devices, and the growing number of high-quality digital instructional tools create an unprecedented opportunity to fundamentally shift the education system to personalize learning around the individual needs of every student. Digital Learning Now! (DLN), a

national initiative under the Foundation for Excellence in Education (ExcellinEd), in association with Getting Smart, brings "Navigating the Digital Shift: Implementation Strategies for Blended and Online Learning" to readers interested in exploring the implementation challenges at the intersection of these shifts. Co-authored by John Bailey, Carri Schneider, and Tom Vander Ark, "Navigating the Digital Shift" offers updated versions of the eight papers originally released in the "DLN Smart Series" including contributions from 11 additional co-authors representing leading organizations such as Public Impact, the International Association for K-12 Online Learning (iNACOL) and The Learning Accelerator. Topics include: blended learning implementation, teaching conditions and careers, competency-based learning, student data, online learning myths, and student-based funding. Jeb Bush, Governor of Florida from 1999-2007 and Chairman of ExcellinEd, contends that the book "provides policymakers and education leaders the tools they need to use digital learning as a catalyst for improved student achievement." AASA 2013 Superintendent of the Year Dr. Mark Edwards believes the collection "provides meaningful, practical, and poignant advice as well as commentary regarding the move to college and career ready standards associated with the shift to personal online learning and digital resources." Rhode Island's Commissioner of Elementary and Secondary Education Deborah Gist describes the book as an "invaluable resource that will help educators re-imagine what our schools can look like and what our students can accomplish."

teachers pay teachers math: *How to Create World Class Teacher Compensation* Allan Odden, 2008 This presentation is based on the following principles: 1. The key accountability for schools is to improve student performance. 2. Teachers in the classroom (including those in hard-to-staff fields such as math and special education) and their instructional practice are the single most important factors that will lead to improved student performance. 3. Teacher compensation is the single biggest part of the education budget (often more than 60%). 4. Therefore, linking pay to teacher performance â instructional practice that produces student learning gains is the best way to expend money in a way that ultimately improves student performance. This book shows how the connections among those principles are playing. [Web, ed].

The Society for the Oversea Settlement of British Women (SOSBW) was created in 1919 to facilitate the transportation of female migrants to the former white settler colonies. To do so, the SOSBW worked with various domestic and dominion groups to find the most suitable women for migration, while also meeting the dominions' demands for specific types of workers, particularly women for work in domestic service. While the Society initially aimed to meet its original mandate, it gradually developed its own vision of empire settlement and refocused its efforts on aiding the migration of educated and trained women who were looking for new, modern, and professional work opportunities abroad.
