Understanding Technical Skills

Technical skills are specialized knowledge and abilities related to specific tasks, tools, or technologies. These skills are often measurable and acquired through education, training, or hands-on experience. They form the foundation for performing job-specific functions efficiently and accurately. In fields such as information technology, engineering, healthcare, and finance, technical skills are indispensable.

Definition and Characteristics of Technical Skills

Technical skills involve proficiency in using software, hardware, methodologies, or procedures relevant to a particular profession. These skills are typically quantifiable and can be demonstrated through certifications, portfolios, or practical assessments. They evolve with technological advancements and require continuous learning to stay current.

Examples of Common Technical Skills

Technical skills vary widely across industries but generally include:

- Programming languages (e.g., Python, Java, C++)
- Data analysis and statistical tools (e.g., Excel, R, SQL)
- Machine operation and maintenance
- Network configuration and cybersecurity
- Technical writing and documentation

Exploring Non-Technical Skills

Non-technical skills, often referred to as soft skills, encompass a broad range of interpersonal and cognitive abilities that facilitate effective communication, teamwork, and problem-solving. These skills are critical for adapting to diverse work environments and managing relationships with colleagues, clients, and stakeholders.

Definition and Key Traits of Non-Technical Skills

Non-technical skills are less tangible than technical skills but equally important. They include emotional intelligence, leadership, time management, and conflict resolution. These skills enhance an individual's ability to work collaboratively and navigate workplace challenges successfully.

While technical skills enable employees to perform specific tasks, non-technical skills ensure they can work effectively within teams and adapt to changing circumstances. The combination of both skill sets leads to enhanced job performance, innovation, and career advancement.

Benefits of Integrating Both Skill Sets

Integrating technical and non-technical skills offers numerous advantages, such as improved communication between technical experts and non-technical stakeholders, better project management, and increased problem-solving capabilities. Employees equipped with both skill types are often more versatile and valuable in the workplace.

Impact on Career Development

Professionals who master both technical and non-technical skills tend to experience greater job satisfaction, leadership opportunities, and higher earning potential. Employers prioritize candidates who can not only deliver technical expertise but also collaborate, lead, and adapt to organizational needs.

How to Develop Technical and Non-Technical Skills

Developing both technical and non-technical skills requires deliberate effort and continuous learning. Examples of Technical and Non-Technical Skills in Different Industries

The relevance and application of technical and non-technical skills vary across sectors but remain integral to success in any professional setting. Understanding these differences helps tailor skill development efforts accordingly.

Technical and Non-Technical Skills in Information Technology

In the IT industry, technical skills include programming, network management, and cybersecurity, while non-technical skills focus on problem-solving, teamwork, and customer communication. Both are essential for delivering effective technology solutions.

Skills in Healthcare

Healthcare professionals require technical knowledge such as medical procedures and diagnostics, complemented by non-technical skills like empathy, communication, and teamwork to provide quality patient care.

Skills in Finance

Finance roles demand technical skills in data analysis, accounting, and financial modeling. Non-technical skills such as critical thinking, negotiation, and ethical judgment are equally important to navigate complex financial environments.

technical non technical skills: *Safety at the Sharp End* Rhona Flin, Paul O'Connor, 2017-05-15 Many 21st century operations are characterised by teams of workers dealing with significant risks and complex technology, in competitive, commercially-driven environments. Informed managers in such sectors have realised the necessity of understanding the human dimension to their operations if they hope to improve production and safety performance. While organisational safety culture is a key determinant of workplace safety, it is also essential to focus on the non-technical skills of the system operators based at the 'sharp end' of the organisation. These skills are the cognitive and social skills required for efficient and safe operations, often termed Crew Resource Management (CRM) skills. In industries such as civil aviation, it has long been appreciated that the majority of accidents could have been prevented if better non-technical skills had been demonstrated by personnel operating and maintaining the system. As a result, the aviation industry has pioneered the development of CRM training. Many other organisations are now introducing non-technical skills training, most notably within the healthcare sector. *Safety at the Sharp End* is a general guide to the theory and practice of non-technical skills for safety. It covers the identification, training and evaluation of non-technical skills and has been written for use by individuals who are studying or training these skills on CRM and other safety or human factors courses. The material is also suitable for undergraduate and post-experience students studying human factors or industrial safety programmes.

technical non technical skills: Overcoming Challenges in Software Engineering Education: Delivering Non-Technical Knowledge and Skills Yu, Ligu, 2014-03-31 Computer science graduates often find software engineering knowledge and skills are more in demand after they join the industry. However, given the lecture-based curriculum present in academia, it is not an easy undertaking to deliver industry-standard knowledge and skills in a software engineering classroom as such lectures hardly engage or convince students. *Overcoming Challenges in Software Engineering Education: Delivering Non-Technical Knowledge and Skills* combines recent advances and best practices to improve the curriculum of software engineering education. This book is an essential reference source for researchers and educators seeking to bridge the gap between industry expectations and what academia can provide in software engineering education.

technical non technical skills: Crew Resource Management Barbara G. Kanki, José Anca, Robert L. Helmreich, 2010-01-20 *Crew Resource Management*, Second Edition continues to focus on CRM in the cockpit, but also emphasizes that the concepts and training applications provide generic guidance and lessons learned for a wide variety of crews in the aviation system as well as in the complex and high-risk operations of many non-aviation settings. Long considered the bible in this field, much of the basic style and structure of the previous edition of *Crew Resource Management* is retained in the new edition. Textbooks are often heavily supplemented with or replaced entirely by course packs in advanced courses in the aviation field, as it is essential to provide students with cutting edge information from academic researchers, government agencies (FAA), pilot associations, and technology (Boeing, ALION). This edited textbook offers ideal coverage with first-hand information from each of these perspectives. Case examples, which are particularly important given the dangers inherent in real world aviation scenarios, are liberally supplied. An image collection and test bank make this the only text on the market with ancillary support. - The only CRM text on the market offering an up-to-date synthesis of primary source material - New edition thoroughly updated and revised to include major new findings, complete with discussion of the international and cultural aspects of CRM, the design and implementation of LOFT - Instructor website with testbank and image collection - Liberal use of case examples

technical non technical skills: Patient safety Great Britain: Parliament: House of Commons: Health Committee, Kevin Barron, 2009-07-03 Reviews of patients' case notes indicate that in the NHS and in other healthcare systems as many as 10 per cent of patients admitted to hospital suffer some form of harm, much of which is avoidable. Tens of thousands of patients suffer unnecessary harm each year and there is a huge cost to the NHS in consequence. This report examines the implementation of safety policy since 2000. That policy has focused on the creation of a unified national mechanism for reporting and analysing incidents, underpinned by a new culture of openness in the NHS. Systems for reporting, and learning from, incidents, were established, centred on the National Reporting and Learning System (NRLS) and the National Patient Safety Agency (NPSA). The Committee finds areas where policy has failed, barriers to change and other reasons for slow progress. It recommends several changes that need to be made in order for there to be further progress in tackling unsafe care. The recommendations are in the areas of: measurement and evaluation; harmed patients and their families or carers; creating a more open, reporting and learning NHS; more patient safety at the front line in the NHS; greater use of technologies to improve care; improvements in the education and training curricula; commissioning by Primary Care Trusts, performance management and regulation; the role of managers and boards; and the role of the Department of Health and Government.

technical non technical skills: Manual of Simulation in Healthcare Richard H. Riley, 2016 Practising fundamental patient care skills and techniques is essential to the development of trainees' wider competencies in all medical specialties. After the success of simulation learning techniques used in other industries, such as aviation, this approach has been adopted into medical education. This book assists novice and experienced teachers in each of these fields to develop a teaching framework that incorporates simulation. The Manual of Simulation in Healthcare, Second Edition is fully revised and updated. New material includes a greater emphasis on patient safety, interprofessional education, and a more descriptive illustration of simulation in the areas of education, acute care medicine, and aviation. Divided into three sections, it ranges from the logistics of establishing a simulation and skills centre and the inherent problems with funding, equipment, staffing, and course development to the considerations for healthcare-centred simulation within medical education and the steps required to develop courses that comply with 'best practice' in medical education. Providing an in-depth understanding of how medical educators can best incorporate simulation teaching methodologies into their curricula, this book is an invaluable resource to teachers across all medical specialties.

technical non technical skills: Safer Surgery Lucy Mitchell, Rhona Flin, 2017-05-15 Operating theatres are very private workplaces. There have been few research investigations into how highly trained doctors and nurses work together to achieve safe and efficient anaesthesia and surgery. While there have been major advances in surgical and anaesthetic procedures, there are still significant risks for patients during operations and adverse events are not unknown. Due to rising concern about patient safety, surgeons and anaesthetists have looked for ways of minimising adverse events. Behavioural scientists have been encouraged by clinicians to bring research techniques used in other industries into the operating theatre in order to study the behaviour of surgeons, nurses and anaesthetists. Safer Surgery presents one of the first collections of studies designed to understand the factors influencing safe and efficient surgical, anaesthetic and nursing practice. The book is written by psychologists, surgeons and anaesthetists, whose contributions combine to offer readers the latest research techniques and findings from some of the leading investigators in this field. It is designed for practitioners and researchers interested in understanding the behaviour of operating theatre team members, with a view to enhancing both training and practice. The material is also suitable for those studying behaviour in other areas of healthcare or in high-risk work settings. The aims of the book are to: a) present the latest research on the behaviour of operating theatre teams b) describe the techniques being used by psychologists and clinicians to study surgeons, anaesthetists and theatre nurses' task performance c) outline the safety implications of the research to date.

The phenomenal progression of technology has led to an age of powerful devices always connected through social media, as well as, advanced simulation and augmented reality tools. Training and education have often struggled to keep up with these technological improvements. Nevertheless, neurosurgical trainees have been recently exposed to new tools during their training such as anatomy 3D printed models or

augmented reality apps. Pandemic limitations have also boosted the exploitation of online education resources in conjunction with the rising role of social media in both publishing and case discussion.

technical non technical skills: Maritime Skills on Vessels & Shore - The STCW Convention's Relevance & Recommendations Dr. (Capt.) Vivek Jain, 2023-07-11 This Book is of the seafarers, by the seafarers, for the seafarers Seafarers are the core of all maritime trade and their expectations/perspectives alone should be at the centre of all solutions for maritime skills. Taking this standpoint, the editor has explored the issues of maritime skills with critical gaps following a framework of research methodology. The issue of critical gaps in maritime skills is further exacerbated due to the impact on seafarers caused by changes in - the ecosystem, status & relationship with stakeholders, technology, focus on renewable energy, anxiety levels and so forth. Furthermore, stakeholders can no longer ignore the fact that seafarers are leaving a seagoing career after working for only a few years. Therefore, the editor has also explored the need to prepare seafarers for transition into maritime shore jobs to preserve their maritime skills within the maritime industry. This exhaustive book can be used as a guide for further revisions or a revamp of the current STCW Convention. The editor thereafter divided the researched critical gaps in maritime skills into four groups (Jain's Model for Maritime Skills) - Panoptic, Social Intelligence, Upskilling & Reskilling for onboard vessels skills, and Portable Skills for future shore jobs. Panoptic and Social Skills are core skills required for both on board vessels as well for maritime shore jobs. Thereafter, the editor embarked on a voyage to discover, persuade, collaborate with a number of exceptionally experienced subject-matter experts over many months to collaboratively pursue many mini-research projects across all selected maritime skills, adopting specific methodology to plug these critical gaps. These experts were drawn - (1) from countries such as India, the Philippines, Romania, South Korea, Malaysia, UAE, the UK and Singapore, (2) from both genders, (3) from deck, engine & professionals settled ashore, (4) with current experience in the industry and/or at sea at a

fundamental level, and (5) from seafaring-supplying nations, recognising/experiencing the relevant socio-economic circumstances of seafarers. From this book, seafarers will not only find ideas on how to plug gaps in their maritime skills, but also how they can transition with their existing skills to other maritime jobs, such as marine superintendents, marine managers, designated persons ashore, managers supervising new build/second-hand vessels, IT managers in the maritime domain, marine surveyors, marine experts/investigators, marine pilots in ports, maritime arbitrators, managers in shipyards and so forth. The solutions in this book will also resolve the issue of the shortage and retention of seafarers.
