technical communication 13th edition: Busting the Myth of the Communication Metaphor Sarah Read, 2025-07-01 Traces the linguistic, rhetorical, historical, cultural, and economic origins of our most basic beliefs and practices for successful technical writing to initiate a reckoning about who they serve and who they harm. Busting the Myth of the Communication Metaphor is a transdisciplinary approach to making visible and explaining the multiple origins of why our most basic beliefs about what makes scientific and technical writing successful are wrong, ineffective, and harmful. These tacitly held beliefs and practices, collectively called the Communication Metaphor, stand in as symbolic for a messier, more reality-based understanding of how writing and communication works. By starting from conventional statements made by scientists, technical professionals, and standard textbooks that successful technical writing is short and to the point, with the facts only, no opinions, the book traces the histories and structures of the multiple elements of the Communication Metaphor. The text synthesizes survey results, multiple strands of scholarship, personal experience, and original illustrations into a powerful argument for imagining a more just approach to scientific and technical writing.

technical communication 13th edition: Content Management George Pullman, Gu Baotung, 2017-03-02 This collection of articles is the first attempt by academics and professional writers to delve into the world of content management systems. The knowledge economy's greatest asset and primary problem is information management: finding it, validating it, re-purposing it, keeping it current, and keeping it safe. In the last few years content management software has become as common as word-processing software was five years ago. But unlike word processors, which are designed for single authorization and local storage, content management systems are designed to accommodate large-scale information production, with many authors providing many different pieces of information kept in a web-accessible database, any piece of which might find its way into electronic documents that the author doesn't even know exist. These software systems are complex, to say the least, and their impact on the field of writing will be immense.

This book demonstrates the benefits, risks, and relevance of emerging augmentation technologies such as brain-computer interaction devices for cognitive enhancement; robots marketed to improve human social interaction; wearables that extend human senses, augment creative abilities, or overcome physical limitations; implantables that amplify intelligence or memory; and devices, AI generators, or algorithms for emotional augmentation. It allows scholars and professionals to understand the impact of these technologies, improve digital and AI literacy, and practice new methods for their design and adoption. This book will be vital reading for students, scholars, and professionals in fields including technical communication, UX design, computer science, human factors, information technology, sociology of technology, and ethics. technical communication 13th edition: The Emergence of a Tradition Elizabeth Tebeaux, 2018-02-06 Examining books on different topics as these appeared during the Renaissance allows us to see developments in the use of graphics, the shift from orality to textuality, the expansion of knowledge, and rise of literacy, particularly among middle-class women readers, who were an important audience for many of these books. Changes in English Renaissance technical books provide a new, and as yet largely unexplored means of viewing the Renaissance and the dramatic changes that emerged during the 1475-1640 period, the first years of English printing.

technical communication 13th edition: Feminist Rhetorical Science Studies Julie Jung, Amanda Booher, 2018-01-30 This edited collection disrupts tendencies in feminist science studies to dismiss rhetoric as having concern only for language, and it counters posthumanist theories that ignore human materialities and asymmetries of power as co-constituted with and through distinctions such as gender, sex, race, and ability. The eight essays of *Feminist Rhetorical Science Studies: Human Bodies, Posthumanist Worlds* model methodologies for doing feminist research in the rhetoric of science. Collectively they build innovative interdisciplinary bridges across the related but divergent fields of feminism, posthumanism, new materialism, and the rhetoric of science. Each essay addresses a question: How can feminist rhetoricians of science engage responsibly with emerging theories of the posthuman? Some contributors respond with case studies in medical practice (fetal ultrasound; patient noncompliance), medical science (the neuroscience of sex differences), and health policy (drug trials of the U.S. Food and Drug Administration); others respond with a critical review of object-oriented ontology and a framework for researching women technical writers in the workplace. The contributed essays are in turn framed by a comprehensive introduction and a final chapter from the editors, who argue that a key contribution of feminist posthumanist rhetoric is that it rethinks the agencies of people, things, and practices in ways that can bring about more ethical human relations. Individually the contributions offer as much variety as consensus on matters of methodology. Together they demonstrate how feminist posthumanist and materialist approaches to science expand our notions of what rhetoric is and does, yet they manage to do so without sacrificing what makes their inquiries distinctively rhetorical.

technical communication 13th edition: Together with Technology Jason Swarts, 2017-03-02 This book examines the complex roles that texts serve as parts of an organizational cognitive infrastructure. Texts make knowledge and experience tangible and durable. They help shape interactions between people. As professions have become more writing-centered in recent decades, many organizations have instituted writing review practices to help newcomers produce better writing and thus become more effective organizational citizens. Dr. Swarts examines those writing review practices and questions whether available supportive technologies adequately prepare professional writers and professionals who write to appreciate the complex functions their texts serve. He reports on a study of the impact of two technologies (paper text and textual replay) on writing review. Unlike paper, which presents texts in a static form, textual replay presents texts as the products of writing practices. Textual replay records onscreen writing activity and creates a video that writers and reviewers use to supplement their discussion of revisions.
