

technology in brave new world

technology in brave new world plays a critical role in shaping the dystopian society depicted in Aldous Huxley's seminal novel, "Brave New World." The novel envisions a future where advanced scientific techniques and technological innovations underpin social control, human conditioning, and mass production of citizens. This exploration of technology extends beyond mere machinery, encompassing genetic engineering, psychological manipulation, and sophisticated conditioning methods. The pervasive use of technology in Brave New World serves as a powerful commentary on the potential consequences of unrestrained scientific progress and its impact on individuality, freedom, and human values. This article delves into the various technological aspects featured in the novel, analyzing their functions, implications, and symbolic meanings. The discussion will cover the role of reproductive technology, psychological conditioning, the use of soma as a technological tool, and the broader societal effects of such advancements. Following this introduction, a detailed table of contents will outline the main sections covered in this article.

- Reproductive Technology and Genetic Engineering
- Psychological Conditioning and Behavioral Control
- The Role of Soma: Technology as a Means of Social Stability
- Technological Control of Society and Individuality
- Implications of Technology in Brave New World

Reproductive Technology and Genetic Engineering

One of the most striking features of technology in Brave New World is the extensive use of reproductive technology and genetic engineering to control human life from its earliest stages. The novel introduces the concept of the Bokanovsky Process, a scientific method that enables the mass production of nearly identical human embryos. This process allows the World State to manufacture a large population of workers and citizens, each genetically tailored to fit specific social roles. The technology eradicates natural reproduction, replacing it with a factory-like system of human creation. The implications of this shift are profound, as it removes the unpredictability and diversity inherent in natural birth.

The Bokanovsky Process

The Bokanovsky Process is a central technological innovation that allows for the creation of up to ninety-six identical human embryos from a single egg. This technique ensures a stable and uniform population that can be easily managed and conditioned for predetermined societal roles. The process epitomizes the mechanization of human life, transforming procreation into an industrial procedure. It also reflects the novel's critique of technological control over biological processes.

Predestination Through Genetic Engineering

Beyond mass production, genetic engineering in Brave New World is used to predetermine the intelligence, physical abilities, and social status of individuals. The World State's scientists manipulate embryos to fit them into one of five castes—Alphas, Betas, Gammas, Deltas, and Epsilons—each designed for specific jobs and levels of responsibility. This manipulation ensures societal stability by eliminating competition and dissatisfaction, but it also suppresses individuality and freedom.

Psychological Conditioning and Behavioral Control

In addition to biological manipulation, technology in Brave New World extends to psychological conditioning techniques that reinforce social norms and obedience. From infancy, individuals undergo hypnopaedic learning, or sleep-teaching, which implants state-approved morals, beliefs, and behaviors. This form of conditioning is a subtle yet powerful technological tool that shapes the citizens' minds without their conscious awareness.

Hypnopaedia: Sleep-Teaching Technology

Hypnopaedia involves playing repeated messages or moral lessons to sleeping children, ensuring that they internalize the values of the World State. This technology effectively replaces traditional education and parental influence, embedding conformity and discouraging critical thought. The sleep-teaching process is continuous and pervasive, demonstrating the use of technology to control not just bodies but minds.

Behavioral Conditioning Techniques

Beyond hypnopaedia, the novel describes various forms of behavioral conditioning that employ technology to create aversions or preferences. For example, children are exposed to electric shocks and other stimuli paired with undesirable objects or ideas, conditioning them to reject anything that may disrupt the social order. These methods ensure that individuals naturally conform to their expected roles without conscious resistance.

The Role of Soma: Technology as a Means of Social Stability

Soma, the fictional drug in *Brave New World*, represents the use of pharmaceutical technology as a tool for maintaining social order and individual compliance. It functions as a means to suppress negative emotions, discomfort, and dissatisfaction, creating an illusion of happiness and contentment among the populace.

Soma as a Technological Instrument

The distribution and use of soma are systematized and institutionalized, reflecting its role as a technological device for psychological control. The drug's easy availability allows citizens to escape reality and avoid confronting any form of pain or unhappiness. It is a critical component of the World State's strategy to prevent unrest and maintain a stable society by chemically regulating mood and perception.

Impact on Society and Individual Autonomy

Soma's effects illustrate the theme of technology's potential to undermine individuality and authentic human experience. While the drug ensures a superficially peaceful society, it also suppresses genuine emotions and freedoms, turning citizens into passive consumers of pleasure. This technological intervention raises ethical questions about the cost of social stability when achieved through artificial means.

Technological Control of Society and Individuality

Technology in *Brave New World* functions as an all-encompassing system of control, extending from biological engineering to psychological manipulation and pharmacological intervention. The integration of these technologies serves to eliminate individuality, creativity, and dissent, replacing them with conformity, uniformity, and obedience.

Social Engineering Through Technological Means

The World State employs technology to engineer a society where every aspect of life is regulated, from birth to death. This includes not only physical and mental conditioning but also strict control of leisure activities, consumer behavior, and even sexual relationships. Technology becomes synonymous with control, enabling the ruling powers to maintain dominance without overt coercion.

Suppression of Individuality and Freedom

The technological apparatus in *Brave New World* suppresses personal identity by standardizing citizens and eliminating choices that might lead to individuality. The extensive use of technology to shape desires,

thoughts, and behaviors results in a homogenized population that prioritizes collective stability over personal freedom. This suppression is a central concern of the novel's critique of technological progress.

Implications of Technology in Brave New World

The portrayal of technology in Brave New World invites reflection on the ethical and societal implications of scientific advancements. It raises important questions about the balance between technological progress and human values, especially concerning autonomy, freedom, and the nature of happiness.

Ethical Considerations

The novel challenges readers to consider the moral boundaries of technological intervention in human life. The use of reproductive technology, psychological conditioning, and pharmacological control in Brave New World illustrates how technology can be used to manipulate and dominate rather than liberate. These ethical dilemmas remain relevant in contemporary debates about genetic engineering, artificial intelligence, and behavioral sciences.

Technology and Social Stability

While technology in the novel achieves a superficially orderly society, it does so at the expense of emotional depth, individuality, and freedom. The depiction suggests that technological solutions to social problems may create new forms of control and oppression, highlighting the potential risks of relying solely on technological means for societal management.

Lessons for Modern Society

The themes explored through technology in Brave New World serve as a cautionary tale for modern readers. They emphasize the importance of critically assessing technological innovations and their impact on human dignity and social structures. The novel encourages vigilance against the uncritical adoption of technology that may erode essential human qualities.

- Mass production of humans through the Bokanovsky Process
- Genetic predestination and caste system
- Hypnopaedic conditioning and behavioral manipulation
- Pharmaceutical control via soma

- Suppression of individuality and critical thought
- Ethical and societal implications of technological control

Frequently Asked Questions

How does technology influence society in Aldous Huxley's 'Brave New World'?

In 'Brave New World,' technology is used to control and condition society, ensuring stability and conformity through genetic engineering, psychological conditioning, and the use of the drug soma.

What role does genetic engineering play in the society depicted in 'Brave New World'?

Genetic engineering is fundamental in 'Brave New World,' as it allows the World State to predetermine the intelligence, abilities, and social roles of individuals, creating a rigid caste system.

How is technology used for social control in 'Brave New World'?

Technology in 'Brave New World' is used for social control by manipulating human biology and psychology, such as through hypnopaedic learning (sleep-teaching), conditioning, and the distribution of soma to suppress dissent.

What is soma, and how does it represent technology's impact in 'Brave New World'?

Soma is a government-provided drug that induces happiness and escapism, symbolizing how technology is used to placate the population and prevent unrest in 'Brave New World.'

How does the technological advancement in reproduction affect family structures in 'Brave New World'?

Reproductive technology eliminates natural birth and family units in 'Brave New World,' replacing them with artificial reproduction in Hatcheries and Conditioning Centers, thereby eradicating traditional family bonds.

In what ways does 'Brave New World' critique the use of technology for human enhancement?

The novel critiques the use of technology for human enhancement by showing how it leads to loss of individuality, freedom, and authentic human experiences, emphasizing conformity over personal growth.

How does technology affect individuality in 'Brave New World'?

Technology suppresses individuality in 'Brave New World' by standardizing people's abilities and desires through genetic engineering and conditioning, creating a homogenized society.

What technological methods are used for psychological conditioning in 'Brave New World'?

Psychological conditioning in 'Brave New World' is achieved through hypnopaedia (sleep-teaching), controlled sensory experiences, and social reinforcement to instill state-approved beliefs and behaviors.

How does the society in 'Brave New World' use technology to manage emotions and desires?

The society uses technology like soma and conditioning techniques to regulate emotions and desires, ensuring that individuals remain content and compliant without experiencing true emotional depth.

What warnings does 'Brave New World' offer regarding reliance on technology?

The novel warns that overreliance on technology for social engineering and control can dehumanize individuals, eliminate personal freedom, and create a superficial society focused on pleasure and stability at the cost of authenticity.

Additional Resources

1. Brave New World Revisited: Technology and Society

This book explores the role of technology in Aldous Huxley's **Brave New World**, analyzing how scientific advancements shape social structures and human behavior. It delves into the ethical implications of genetic engineering, conditioning, and surveillance depicted in the novel. The author compares these fictional technologies with real-world developments, offering a cautionary perspective on technological control.

2. The Science of Control: Technology in Brave New World

Focusing on the scientific methods used to manipulate society in **Brave New World**, this book examines the technological tools employed to maintain order and conformity. It discusses the implications of reproductive technologies, psychological conditioning, and pharmacological control. The narrative highlights parallels between Huxley's vision and modern technological trends.

3. Genetics and Society: Lessons from Brave New World

This book investigates the genetic engineering aspects central to **Brave New World** and their impact on social hierarchy and identity. It provides an overview of the novel's depiction of eugenics and compares it with contemporary genetic technologies. Ethical debates surrounding human enhancement and genetic manipulation are prominently discussed.

4. Pharmaceutical Control: The Use of Technology in Brave New World

Examining the use of the drug "soma" in the novel, this book analyzes how pharmaceuticals serve as a tool for social control and emotional regulation. It explores the broader implications of drug use in maintaining societal stability and preventing dissent. The book also reflects on the modern-day use of medication for behavioral and psychological management.

5. Conditioning and Technology: Engineering the Human Mind

This book delves into the psychological conditioning techniques depicted in **Brave New World**, focusing on how technology facilitates behavioral control from infancy. It discusses Pavlovian conditioning, hypnopaedia (sleep-teaching), and other methods used to shape citizens' beliefs and actions. The author connects these fictional technologies to current practices in education and media influence.

6. Surveillance and Technology: Watching in Brave New World

Exploring the theme of surveillance, this book investigates how technology is used to monitor and control the population in **Brave New World**. It discusses the balance between security and privacy, drawing comparisons with modern surveillance technologies. The implications for freedom and autonomy in a technologically controlled society are critically examined.

7. Technology, Consumption, and Control: Insights from Brave New World

This book analyzes the intersection of consumerism and technology in Huxley's dystopia, focusing on how technological advancements drive consumption habits to maintain social order. It explores the manipulation of desires and the engineered pursuit of pleasure as means of control. The narrative offers insights into the relationship between technology, economy, and human satisfaction.

8. Artificial Intelligence and Automation in Brave New World

Though not explicitly mentioned in the novel, this book extrapolates the potential roles of AI and automation within the technological landscape of **Brave New World**. It speculates on how intelligent systems might enhance conditioning, production, and societal management. The work bridges Huxley's mid-20th-century vision with 21st-century technological possibilities.

9. Ethics of Technological Progress: Reflections from Brave New World

This philosophical work discusses the moral questions raised by the technological advancements in **Brave*

New World*. It examines the consequences of sacrificing individuality and freedom for stability and efficiency. The author encourages a critical evaluation of how society integrates technology while preserving human values.

technology in brave new world: The Media Creates Us in Its Image and Other Essays on Technology and Culture Richard Stivers, 2020-03-31 The Media Creates Us in Its Image and Other Essays on Technology and Culture proposes that modern technology seriously influences every aspect of culture and personality. Technology shapes our beliefs and values and even how we think of ourselves. It affects religion, morality, education, language, communication, and sexual identity. Every institution, every organization, is brought under its purview. This book attempts to awaken the reader to the destructive side of modern technology that exists side-by-side with its constructive side. What modern technology is destroying, however, is the very meaning of being human. The essay "The Media Creates Us in Its Image" makes this case most dramatically. The book asks the reader the following question: Is what you have gained from the use of modern technology more important than what you have lost? How do we once again bring technology under our control in the face of its inexorable "progress"?

technology in brave new world: Technology and Values Craig Hanks, 2009-05-04 This anthology features essays and book excerpts on technology and values written by preeminent figures in the field from the early 20th century to the present. It offers an in-depth range of readings on important applied issues in technology as well. Useful in addressing questions on philosophy, sociology, and theory of technology Includes wide-ranging coverage on metaphysics, ethics, and politics, as well as issues relating to gender, biotechnology, everyday artifacts, and architecture A good supplemental text for courses on moral or political problems in which contemporary technology is a unit of focus An accessible and thought-provoking book for beginning and advanced undergraduates; yet also a helpful resource for graduate students and academics

technology in brave new world: The Good Life in a Technological Age Philip Brey, Adam Briggie, Edward Spence, 2012 Modern technology has changed the way we live, work, play, communicate, fight, love, and die. Yet few works have systematically explored these changes in light of their implications for individual and social welfare. How can we conceptualize and evaluate the influence of technology on human well-being? Bringing together scholars from a cross-section of disciplines, this volume combines an empirical investigation of technology and its social, psychological, and political effects, and a philosophical analysis and evaluation of the implications of such effects.

technology in brave new world: Brave New World Aldous Huxley, 2003-01-01 A novel for secondary school English classes with great writing and important themes.

technology in brave new world: Technology as a blessing or curse in Aldous Huxley's "Brave New World". The importance of individuality and freedom , 2020-10-06 Pre-University Paper from the year 2013 in the subject English Language and Literature Studies - Literature, grade: 14, , language: English, abstract: This scientific research paper evaluates the importance of freedom and

individuality by reference to Aldous Huxley's novel "Brave New World" (1932). I chose this topic, because of its high complexity and the fact that technological progress plays a continuously rising role in our daily routine to make our lives easier or more comfortable. By writing about the inhumane circumstances, the inhabitants of the Brave New World live in, without realizing their loss of individuality or freedom; I want to point out that technological progress should always be only a human's tool instead of his suppressor. The topic itself is very topical, because there are numerous controversies concerning technology, especially in the field of agricultural genetic engineering or, even more controversial, the use of technology in relation to human beings such as cloning and stem cell research. The novel contains a great deal of hidden messages and allusions, which is the reason why I would like to analyse the novel profoundly and convince the reader of the following pages of my hypothesis that humanity is more crucial for progress than technology. This research paper was a challenge, since it has been the first scientific work I have written and the fact that I have chosen a complex and demanding topic. Aldous Huxley's dystopian science-fiction novel "Brave New World", which was published in 1932 in London, covers the issue of a dehumanized society, in which individuality, freedom and contiguous, for us self-evident morals are taken in exchange for "Community, Identity [and], Stability. It takes place in the future, in the year A.F. (Annum Ford) 632, which equals the year 2540 in our calendar.

technology in brave new world: Technology and the Philosophy of Religion David Lewin, 2010-09-13 The last one hundred years has seen unimaginable technological progress transforming every aspect of human life. Yet we seem unable to shake a profound unease with the direction of modern technology and its ideological siblings, global capitalism and massive consumption. Philosophers such as Marcuse, Borgmann and especially Heidegger, have developed important analyses of technological society, however in this book David Lewin argues that their ideas have remained limited either by their secular context, or by the narrow conception of religion that they do allow. This study guides the reader along the newly formed paths of the philosophy of technology, arguing that where those paths come to an abrupt end, a religious discourse is needed to articulate the ultimate concerns that drive technological action. It calls for a meditation on the central insight of many religious traditions that, in an ultimate sense, we 'know not what we do.' To acknowledge that we know not what we do is the first step towards a theology of technology that draws upon insights from the mystical theological tradition, as well as from recent developments in the continental philosophy of religion.

technology in brave new world: The Art of Living for A Technological Age Ashley John Moyse, Scott A. Kirkland, 2021-02-23 The Art of Living for A Technological Age sketches the crisis of our late modern age, where persons are enamored by the promises of progress and disciplined to form by the power of technology--the ontology of our age. Yet, it also offers a response, attending to those performative activities, educative and transformative social practices that might allow us to live humanly and bear witness to human being (becoming) for a technological age. As such, it is an exemplary example of the goals and outcomes of the Dispatches series, the individual volumes of which draw on diverse theological resources in order to offer urgent responses to contemporary crises. Authors in the series introduce succinct and provocative arguments intended to provoke dialogue and exchange of ideas, while setting in relief the implications of theology for political and moral life.

technology in brave new world: Law and the Technologies of the Twenty-First Century Roger Brownsword, Morag Goodwin, 2012-06-14 A clear and comprehensive introduction for students studying key regulatory challenges posed by technologies in the twenty-first century. Co-authored by a leading scholar in the field with a new scholar to the area, it combines comprehensive knowledge with a fresh perspective. Essential reading for students of law and technology.

technology in brave new world: Human Identity at the Intersection of Science, Technology and Religion Christopher C. Knight, 2016-05-13 Humans are unique in their ability to reflect on themselves. Recently a number of scholars have pointed out that human self-conceptions

have a history. Ideas of human nature in the West have always been shaped by the interplay of philosophy, theology, science, and technology. The fast pace of developments in the latter two spheres (neuroscience, genetics, artificial intelligence, biomedical engineering) call for fresh reflections on what it means, now, to be human, and for theological and ethical judgments on how we might shape our own destiny in the future. The leading scholars in this book offer fresh contributions to the lively quest for an account of ourselves that does justice to current developments in theology, science, technology, and philosophy.

technology in brave new world: Human Identity at the Intersection of Science, Technology and Religion Dr Christopher C Knight, Professor Nancey Murphy, 2013-06-28 Humans are unique in their ability to reflect on themselves. Recently a number of scholars have pointed out that human self-conceptions have a history. Ideas of human nature in the West have always been shaped by the interplay of philosophy, theology, science, and technology. The fast pace of developments in the latter two spheres (neuroscience, genetics, artificial intelligence, biomedical engineering) call for fresh reflections on what it means, now, to be human, and for theological and ethical judgments on how we might shape our own destiny in the future. The leading scholars in this book offer fresh contributions to the lively quest for an account of ourselves that does justice to current developments in theology, science, technology, and philosophy.

technology in brave new world: The Nature of Technology Michael P. Clough, Joanne K. Olson, Dale S Niederhauser, 2013-09-03 How does technology alter thinking and action without our awareness? How can instantaneous information access impede understanding and wisdom? How does technology alter conceptions of education, schooling, teaching and what learning entails? What are the implications of these and other technology issues for society? Meaningful technology education is far more than learning how to use technology. It entails an understanding of the nature of technology — what technology is, how and why technology is developed, how individuals and society direct, react to, and are sometimes unwittingly changed by technology. This book places these and other issues regarding the nature of technology in the context of learning, teaching and schooling. The nature of technology and its impact on education must become a significant object of inquiry among educators. Students must come to understand the nature of technology so that they can make informed decisions regarding how technology may influence thinking, values and action, and when and how technology should be used in their personal lives and in society. Prudent choices regarding technology cannot be made without understanding the issues that this book raises. This book is intended to raise such issues and stimulate thinking and action among teachers, teacher educators, and education researchers. The contributions to this book raise historical and philosophical issues regarding the nature of technology and their implications for education; challenge teacher educators and teachers to promote understanding of the nature of technology; and provide practical considerations for teaching the nature of technology.

technology in brave new world: Eschatology and the Technological Future Michael S. Burdett, 2014-12-05 The rapid advancement of technology has led to an explosion of speculative theories about what the future of humankind may look like. These technological futurisms have arisen from significant advances in the fields of nanotechnology, biotechnology and information technology and are drawing growing scrutiny from the philosophical and theological communities. This text seeks to contextualize the growing literature on the cultural, philosophical and religious implications of technological growth by considering technological futurisms such as transhumanism in the context of the long historical tradition of technological dreaming. Michael Burdett traces the latent religious sources of our contemporary technological imagination by looking at visionary approaches to technology and the future in seminal technological utopias and science fiction and draws on past theological responses to the technological future with Pierre Teilhard de Chardin and Jacques Ellul. Burdett's argument arrives at a contemporary Christian response to transhumanism based around the themes of possibility and promise by turning to the works of Richard Kearney, Eberhard Jüngel and Jürgen Moltmann. Throughout, the author highlights points of correspondence and divergence between technological futurisms and the Judeo-Christian understanding of the future.

technology in brave new world: *The Hope and Despair of Human Bioenhancement* Paschal M. Corby, 2019-12-23 *The Hope and Despair of Human Bioenhancement* is a virtual dialogue between Transhumanists of the "Oxford School" and the thought of Joseph Ratzinger. Set in the key of hope and despair, it considers whether or not the transhumanist interpretation of human limitations is correct, and whether their confidence in the methods of human enhancement, especially through biotechnology, corresponds to genuine hope. To this end, it investigates the philosophical foundations of transhumanism in modernity's rejection of metaphysics, the triumph of positivism, and the universalism of the theory of evolution, which when applied to anthropology becomes the materialist reduction of the human person. Ratzinger calls into question this absolutization of positive reason and its limitation of hope to what human beings can produce, naming it a pathology of reason, a mutilation of human dignity, and a façade of a world without hope. In its place, he offers a richer concept of hope that acknowledges our contingency and limitations.

technology in brave new world: *A Companion to Science Fiction* David Seed, 2008-04-15 *A Companion to Science Fiction* assembles essays by an international range of scholars which discuss the contexts, themes and methods used by science fiction writers. This Companion conveys the scale and variety of science fiction. Shows how science fiction has been used as a means of debating cultural issues. Essays by an international range of scholars discuss the contexts, themes and methods used by science fiction writers. Addresses general topics, such as the history and origins of the genre, its engagement with science and gender, and national variations of science fiction around the English-speaking world. Maps out connections between science fiction, television, the cinema, virtual reality technology, and other aspects of the culture. Includes a section focusing on major figures, such as H.G. Wells, Arthur C. Clarke, and Ursula Le Guin. Offers close readings of particular novels, from Mary Shelley's *Frankenstein* to Margaret Atwood's *The Handmaid's Tale*.

technology in brave new world: *Cases on Technologies for Educational Leadership and Administration in Higher Education* Luppici, Rocci, 2012-05-31 Institutions of higher learning rely heavily on technological innovation to effectively deliver educational services and provide students with a quality experience. Thus, the ability of leaders and administrators at these institutions to produce effective policy and to innovate in an evolving world hinges on successfully applying technological solutions to everyday challenges facing their college or university. *Cases on Technologies for Educational Leadership and Administration in Higher Education* brings together a collection of practical case studies exploring the application of new technologies, such as student management systems and enterprise resource planning, along with strategies that educational leaders can use to foster organizational change. Targeted toward college and university administrators and leaders, this book discusses successful strategies for managing universities in the tech-savvy 21st century.

technology in brave new world: *Futures of the Human Subject* Sławomir Koziół, 2022-09-07 *Futures of the Human Subject* focuses on the representation of the effects of technology use on human subjectivity in several recent near-future science fiction novels. Sharing the idea that human subjects are constructed in the world in which they exist, this volume inscribes itself in the wider field of posthumanism which contests the liberal humanist notion of people as self-contained, autonomous agents. At the same time, it is the first substantial study of literary representations of the human subject carried out within the conceptual framework of Foucault-inflected philosophy of technical mediation, which examines the nature of the relation between people and specific technologies as well as the way in which this relation affects human subjectivity. As such, the book may help readers to exercise more effective control over the way in which they are constituted as subjects in this technologically saturated world.

technology in brave new world: *Encyclopedia Of Reproductive Technologies* Annette Burfoot, 2019-08-19 This collection of encyclopedic entries provides a broad-based appreciation of new reproductive technologies that includes accessible technological descriptions and their historical and social contexts. The collection is divided into five thematic areas: Theories of Reproduction Ancient to Contemporary; Early Reproductive Technologies; Post-War De

technology in brave new world: *Science and Religion in Western Literature* Michael Fuller, 2022-08-16 This book explores ways in which Western literature has engaged with themes found within the field of science and religion, both historically and in the present day. It focuses on works of the imagination as important locations at which human arguments, hopes and fears may be played out. The chapters examine a variety of instances where scientific and religious ideas are engaged by novelists, poets and dramatists, casting new light upon those ideas and suggesting constructive ways in which science and religion may interact. The contributors cover a rich variety of authors, including Mary Shelley, Aldous Huxley, R. S. Thomas, Philip Pullman and Margaret Atwood. Together they form a fascinating set of reflections on some of the significant issues encountered within the discourse of science and religion, indicating ways in which the insights of creative artists can make a valuable and important contribution to that discourse.

technology in brave new world: *Reinventing the Open Door* Gunder Myran, Gunder A. Myran, 2009-12 Offers a new, broader model of the open-door philosophy of community colleges to better serve an increasingly diverse student population by not only ensuring access to higher education, but also by ensuring success, a campus environment of inclusiveness, and the colleges' engagement with the communities they serve--Provided by publisher.

technology in brave new world: *Aldous Huxley Annual* Bernfried Nugel, Jerome Meckier, 2009-12-28 Aldous Huxley Annual is the official organ of the Aldous Huxley Society at the Centre for Aldous Huxley Studies in Munster, Germany. It publishes essays on the life, times, and interests of Aldous Huxley and his circle. It aspires to be the sort of periodical that Huxley would have wanted to read and to which he might have contributed. This issue opens with four unknown or little-known short stories by Aldous Huxley: *The Nun's Tragedy* (ca. 1921), *Over the Telephone* (1922), *Nine A.M.* (1924), and *Consider the Lilies* (1954). These stories are followed by a selection of lectures from the Fourth International Aldous Huxley Symposium held in Los Angeles in July 2008, together with an article on *Brave New World* as a parody and satire of Wells, Ford, Freud and Behaviourism in advanced foreign language teaching. The issue closes with another lecture from the Los Angeles Symposium on Huxley as environmental prophet.
