technical interview ai researcher: Frankenstein Urbanism Federico Cugurullo, 2021-05-16 This book tells the story of visionary urban experiments, shedding light on the theories that preceded their development and on the monsters that followed and might be the end of our cities. The narrative is threefold and delves first into the eco-city, second the smart city and third the autonomous city intended as a place where existing smart technologies are evolving into artificial intelligences that are taking the management of the city out of the hands of humans. The book empirically explores Masdar City in Abu Dhabi and Hong Kong to provide a critical analysis of eco and smart city experiments and their sustainability, and it draws on numerous real-life examples to illustrate the rise of urban artificial intelligences across different geographical spaces and scales. Theoretically, the book traverses philosophy, urban studies and planning theory to explain the passage from eco and smart cities to the autonomous city, and to reflect on the meaning and purpose of cities in a time when human and non-biological intelligences are irreversibly colliding in the built environment. Iconoclastic and prophetic, Frankenstein Urbanism is both an examination of the evolution of urban experimentation through the lens of Mary Shelley's Frankenstein, and a warning about an urbanism whose product resembles Frankenstein's monster: a fragmented entity which escapes human control and human understanding. Academics, students and practitioners will find in this book the knowledge that is necessary to comprehend and engage with the many urban experiments that are now alive, ready to leave the laboratory and enter our cities.

technical interview ai researcher: The Nvidia Way Tae Kim, 2024-12-10 [L]oaded with fascinating details about Huang's unusual leadership style and maniacal work habits. —Ben Cohen, Wall Street Journal The definitive look at the most remarkable business story of this era. —Morgan Housel, New York Times best-selling author of *The Psychology of Money* and *Same As Ever* A deeply reported business history of the chip-designer Nvidia—from its founding in 1993 to its recent emergence as one of the most valuable corporations in the world—explaining how the company's culture, overseen by cofounder and CEO Jensen Huang, has powered its incredible success. Nvidia is the darling of the age of artificial intelligence: its chips are powering the generative-AI revolution, and demand is insatiable. For all the current interest and attention, however, Nvidia is not of our time. Founded more than three decades ago in a Denny's in East San Jose, for years it was known primarily in the then-niche world of computer gaming. In fact, the company's leather-jacketed leader, Jensen Huang, is the longest-serving CEO in an industry marked by near constant turmoil and failure. In *The Nvidia Way*, acclaimed tech writer Tae Kim draws on more than one hundred interviews—including Jensen (as he is known) and his cofounders, the two original venture capital investors, early former employees, and current senior executives—to show how Nvidia played the longest of long games, repeatedly creating new markets and outmaneuvering competitors, including the original semiconductor giant, Intel, which now finds itself well behind the upstart. Kim offers revelations at every step, among them: An authoritative, myth-busting account of Nvidia's founding in 1993. How Nvidia managed to overcome early missteps that would have killed most start-ups. The benefits of Nvidia's flat organizational structure, which allows even low-level employees to contribute to the direction of the company. How Jensen's obsession with solving the Innovator's Dilemma—the problem of an entrenched market leader falling to smaller, nimbler companies—drove him to reinvent his approach to corporate strategy. How Nvidia saw the coming AI wave sooner than anyone else, and how it bet its future on a technology that had not yet arrived. A rare view into Nvidia's distinct culture and Jensen's management principles, *The Nvidia Way* is a book for our moment as well as an instant classic of business history, with enduring lessons for entrepreneurs and managers alike.

technical interview ai researcher: Tech Olivier Alexandre, 2025-09-23 The first holistic analysis of the space, mindset, and inner workings of Silicon Valley in a generation. Sometimes only an outsider can show how an industry works—and how that industry works upon the world. In Tech, sociologist Olivier Alexandre takes us on a revealing tour of Silicon Valley's prominent personalities and vibrant networks to capture the way its denizens live, think, relate, and innovate, and how they shape the very code and conduct of business itself. Even seasoned observers will gain insight into the industry's singular milieu from Alexandre's piercing eye. He spends as much time with Silicon Valley's major players as with those who fight daily to survive within a system engineered for disruption. Embedded deep within the community, Alexandre accesses rooms shut tight to the public and reports back on the motivations, ambitions, and radical vision guiding tech companies. From the conquest of space to quantum computing, engineers have recast the infinitely large and small. Some scientists predict the end of death and the replacement of human beings with machines. But at what cost? Alexandre sees a shadow hanging over the Valley, jeopardizing its future and the economy made in its image. Critical yet fair, Tech illuminates anew a world of perpetual revolution.

technical interview ai researcher: Algorithms and the Assault on Critical Thought Nancy Ettlinger, 2022-12-30 This book examines the digitalization of longstanding problems of technological advance that produce inequalities and automated governance, which relieves subjects of agency and critical thought, and prompts a need to weaponize thoughtfulness against technocratic designs. The book situates digital-era problems relative to those of previous

sociotechnical milieux and argues that technical advance perennially embeds corrosive effects on social relations and relations of production, recognizing variation across contexts and relative to entrenched societal hierarchies of race and other axes of difference and their intersections. Societal tolerance, despite abundant evidence for harmful effects of digital technologies, requires attention. The book explains blindness to social injustice by technocratic thinking delivered through education as well as truths embraced in the data sciences coupled with governance in universities and the private sector that protect these truths from critique. Institutional inertia suggests benefits of communitarianism, which strives for change emanating from civil society. Scaling postcapitalist communitarian values through communitybased peer production presents opportunities. However, enduring problems require critical reflection, continual revision of strategies, and active participation among diverse community citizens. This book is written with critical geographic sensibilities for an interdisciplinary audience of scholars and graduate and undergraduate students in the social sciences, humanities, and data sciences.

technical interview ai researcher: Technology and Sustainable Development Henrik Skaug Sætra, 2023-04-14 Technological change is at the core of all major disruptions in human history, and revolutions, wars, and general development are regularly connected to some sort of technological change. However, not all development is beneficial. While technology has fueled great innovations and rapid development, the notion of sustainable development has gained prominence as we now experience serious social, economic, and environmental challenges. This book examines whether technology can be used to fix the very problems caused by technology, as the various chapters examine different aspects related to how technology has brought us where we are today (which some will say is the best place humanity's been at according to a range of metrics), and whether technology helps or hinders us in our efforts to solve the challenges we currently face. The issues discussed cover the three sustainability dimensions and include topics such as the materiality of AI, technology in education, AI for gender equality, innovation and the digital divide, and how technology relates to power, the political system, and capitalism. The chapters all build on the theoretical backdrop of technological change, sustainable development, and the UN's Sustainable Development Goals are actively used throughout this book, both to examine how these goals capture or overlook central elements of sustainable development, and also to facilitate and create a common framework of engagement between the chapters. This book provides a novel combination of traditional theories that are explored through different case studies, providing the ground for a better understanding of how and when technology can - and cannot - be the enabler of sustainable

development. It is thus an important resource for students of all disciplines, technologists, and those developing and applying new technologies. It is also a valuable resource for politicians and regulators attempting to harness the power of technology for good, while limiting its negative potential. technical interview ai researcher: Multisector Insights in Healthcare, Social Sciences, Society, and Technology Burrell, Darrell Norman, 2024-02-27 Due to a variety of global challenges in recent times, the dissolution of traditional boundaries between academic disciplines has given rise to a pressing need for innovative problem-solving. Complex issues affect our societies, spanning healthcare, social sciences, organizational behavior, and technology. This shifting landscape necessitates a comprehensive exploration into the interconnections between these diverse fields. The book, *Multisector Insights in Healthcare, Social Sciences, Society, and Technology*, is an innovative guide that seeks to examine the relationships between various fields of knowledge. It celebrates the transformative impact of applied research and interdisciplinary collaboration as the driving force behind overcoming the most significant challenges of our time. As the boundaries between disciplines blur, the book takes readers on a journey through multifaceted issues at the intersection of healthcare, social sciences, organizational behavior, and technology. Chapters within this book unravel the complexities of healthcare ethics, global health initiatives, organizational dynamics, and technological advancements. Through literature reviews, qualitative and quantitative studies, and real-world case analyses, the compendium not only identifies the problems but also offers concrete, evidence-backed solutions. technical interview ai researcher: Innovation Empowerment in Construction 4.0 by the CDR-Approach Bianca Christina Weber-Lewerenz, 2024-09-01 This is a publication-based dissertation. The book examines the promotion of innovation in construction 4.0 through the CDR approach. This opens up a new scientific research field for digital breakthroughs. It raises awareness, explains and enables access to innovative technologies such as digitalization and AI in the construction industry and highlights the associated ethical aspects. This research comes to the conclusion that the human factor forms the basis for designing a socially sustainable digital transformation. The new findings show how innovative technology can support people more efficiently, productively, safely and meaningfully. It specifically addresses responsibility in the corporate environment and develops the key factors for success without neglecting the necessary legal, political, social and educational framework. The aim of this book is to improve and strengthen the transfer of knowledge between research and practice on the basis of scientific communication without language barriers. In this way, the book offers broader access for readers, not only for experts, researchers, designers, implementers, doers and visionaries. The book encourages an interdisciplinary, integrative and constructive dialogue in order to avoid disciplinary silo thinking. The diversity of potential and innovations in the industry is offset by the industry's enormous responsibility to use sustainable, human-controlled AI to achieve the 17 UN SDGs and climate goals and to increase its global competitiveness on the basis of a European quality seal. Surprise and aha effects are inevitable. The book invites key players, everyone involved and everyone who sets new standards, to help shape the digital change in the construction industry and become innovative. The book promotes a new culture of thinking and learning and strengthens the entrepreneurial will to innovate. Opening a new gap in scientific knowledge with this book ultimately leads to a new discipline. In addition, it expands the interdisciplinary dialogue around the globe to find new ways to assume corporate digital responsibility and adapt the framework conditions. The book provides new ideas for defining individual digital corporate strategies.

technical interview ai researcher: Empire of AI Karen Hao, 2025-05-20 An Instant New York Times Bestseller "A bestselling page-turner that has made waves not just in Silicon Valley but

around the world . . . With Empire of AI, Hao is fundamentally shaping many people's perceptions and understanding of the company at the center of the AI revolution." —TIME Magazine, "TIME100 AI 2025" "Excellent and deeply reported." —Tim Wu, The New York Times "Startling and intensely researched . . . an essential account of how OpenAI and ChatGPT came to be and the catastrophic places they will likely take us." —Vulture "Hao's reporting inside OpenAI is exceptional, and she's persuasive in her argument that the public should focus less on A.I.'s putative 'sentience' and more on its implications for labor and the environment." —Benjamin Wallace-Wells, New Yorker From a brilliant longtime AI insider with intimate access to the world of Sam Altman's OpenAI from the beginning, an eye-opening account of arguably the most fateful tech arms race in history, reshaping the planet in real time, from the cockpit of the company that is driving the frenzy When AI expert and investigative journalist Karen Hao first began covering OpenAI in 2019, she thought they were the good guys. Founded as a nonprofit with safety enshrined as its core mission, the organization was meant, its leader Sam Altman told us, to act as a check against more purely mercantile, and potentially dangerous, forces. What could go wrong? Over time, Hao began to wrestle ever more deeply with that question. Increasingly, she realized that the core truth of this massively disruptive sector is that its vision of success requires an almost unprecedented amount of resources: the "compute" power of high-end chips and the processing capacity to create massive large language models, the sheer volume of data that needs to be amassed at scale, the humans "cleaning up" that data for sweatshop wages throughout the Global South, and a truly alarming spike in the usage of energy and water underlying it all. The truth is that we have entered a new and ominous age of empire: only a small handful of globally scaled companies can even enter the field of play. At the head of the pack with its ChatGPT breakthrough, how would OpenAI resist such temptations? Spoiler alert: it didn't. Armed with Microsoft's billions, OpenAI is setting a breakneck pace, chased by a small group of the most valuable companies in human history—toward what end, not even they can define. All this time, Hao has maintained her deep sourcing within the company and the industry, and so she was in intimate contact with the story that shocked the entire tech industry—Altman's sudden firing and triumphant return. The behind-the-scenes story of what happened, told here in full for the first time, is revelatory of who the people controlling this technology really are. But this isn't just the story of a single company, however fascinating it is. The forces pressing down on the people of OpenAI are deforming the judgment of everyone else too—as such forces do. Naked power finds the ideology to cloak itself; no one thinks they're the bad guy. But in the meantime, as Hao shows through intrepid reporting on the ground around the world, the enormous wheels of extraction grind on. By drawing on the viewpoints of Silicon Valley engineers, Kenyan data laborers, and Chilean water activists, Hao presents the fullest picture of AI and its impact we've seen to date, alongside a trenchant analysis of where things are headed. An astonishing eyewitness view from both up in the command capsule of the new economy and down where the real suffering happens, Empire of AI pierces the veil of the industry defining our era.
