why is building relationships with students important: *The Beliefs and Experiences of World Language Teachers in the US* Pamela M. The chapters provide a deep and robust explanation of individual teachers' teaching lives and a cross-contextual comparison of their experiences, shining a light on the realities and demands of modern US schools. why is building relationships with students important: Research, Practice, and Innovations in Teacher Education During a Virtual Age Zimmerman, Aaron Samuel, 2022-11-18 Decades of research have shown that early-career teachers face a number of challenges and hold an increasingly wide set of responsibilities. Teacher educators, therefore, must think carefully about how to prepare early-career teachers for the profession. Additionally, however, the work of teaching and teacher education has become increasingly complex within the context of the current virtual age, including the prominent reality of social media and the significant possibilities of online teaching and learning. *Research, Practice, and Innovations in Teacher Education During a Virtual Age* makes a significant contribution to the scholarship on teacher education by presenting a variety of evidence-based methods that can be used to develop and improve aspects of teacher education within this virtual age, including the curriculum and pedagogy of online teacher education as well as effective ways to prepare preservice teachers for the realities of online teaching and online learning. why is building relationships with students important: Handbook of Research on Facilitating Collaborative Learning Through Digital Content and Learning Technologies Keengwe, Jared, 2022-12-28 Digital content and learning technologies are now the norm at all levels of education. However, there is evidence to suggest that this digital shift is on a spectrum and the spectrum impacts learners in different ways. This means that some instructors who seek to integrate digital content may do so using traditional teaching methods while others use innovative practices to engage learners. Those who integrate innovative digital practices align their instructional practice with theories to facilitate student-centered pedagogies that support and improve the depth and scope of student learning. A primary characteristic of student-centered learning is facilitating collaborative learning using digital content and learning technologies to engage students as well as to enhance meaningful learning. *The Handbook of Research on Facilitating Collaborative Learning Through Digital Content and Learning Technologies* provides K-20 educators with alternative pedagogical and andragogical models that are innovative and incorporate digital content and learning technologies that promote constructive learning. Further, this book explores the relationship between constructivist learning, digital content, and learning technologies. A primary argument in this book is that constructivist teaching strategies such as collaborative learning coupled with digital content and purposeful learning technologies could benefit student learning in ways that are different from those practiced in traditional, non-digital learning environments. Covering topics such as instructional design, self-efficacy, and library engagement, this major

reference work is an essential resource for pre-service teachers, teacher educators, faculty and administrators of K-20 education, librarians, researchers, and academicians.
