why do people love science: A Memoir of Love Science and Adventure- My life with Svante Wold Nouna Kettaneh, 2023-08-23 This book is the story of my life with Svante Wold. Svante was a brilliant Swedish scientist who started the field of Chemometrics (how to extract information from large datasets.) We met at a conference in New Hampshire, when Chemometrics was in its infancy, and fell madly in love. Everything separated us. We lived in different countries, were from differing cultures, had established careers, and were in long-term relationships. But love

and destiny won. We got married, lived together, worked together and were never apart. We founded a company and succeeded in growing and expanding the field of Chemometrics to what it is today: a forever young discipline, showing the capacity to adapt and solve new challenges in the Natural and Life Sciences. Simca, the software we started, has become the standard of Multivariate Analysis. Above all this book is a love story and a tribute to a wonderful and unique man.

why do people love science: Understanding Girls Dale Rose Baker, 2016-07-25 Understanding Girls: Quantitative and Qualitative Research is a retrospective of the author's research that led to receiving the 2013 Distinguished Contributions Award to Science Education through Research. This book includes selected articles that document changes in her research approaches and theoretical frameworks. The articles represent the evolution of her thinking about the issue of girls in science as well as her impact on science education. The author's work is placed in the context of science education research at the time of publication, research in education and psychology, and the culture of the times. She pulls back the curtain that often makes the messy work of research seem straightforward and linear to reveal why she did the research and the methodological decisions she faced. She describes the serendipitous nature of some of the work as well as her frustrations in trying to understand data, and struggles to insure that she accurately and

respectfully presented the voices of girls and their teachers. The book also includes some of the earliest research in engineering education preceding the focus on engineering practices found in the Next Generation Science and Engineering Standards. Understanding Girls provides insights into why girls may or may not decide to participate in science and engineering and what can be done to increase their participation. It provides evidence that we have increased girls' participation and the challenges that remain to insure that every girl who wants to become a scientist or engineer has the opportunity to do so.

why do people love science: *Becoming Scientists* Rusty Bresser, Sharon Fargason, 2023-10-10 Most important to being a good science teacher is holding the expectation that all students can be scientists and think critically. Providing a thinking curriculum is especially important for those children in diverse classrooms who have been underserved by our educational system. -; Becoming Scientists Good science starts with a question, perhaps from the teacher at the start of a science unit or from the children as they wonder what makes a toy car move, how food decomposes, or why leaves change color. Using inquiry science, children discover answers to their questions in the same way that scientists do-;they design experiments, make predictions, observe and describe, offer and test explanations, and share their conjectures with others. In essence, they construct their own understanding of how the world works through experimentation, reflection, and discussion. Look into real classrooms where teachers practice inquiry science and engage students in the science and engineering practices outlined in the Next Generation Science Standards. Rusty Bresser and Sharon Fargason show teachers how to do the following: Build on students' varied experiences, background knowledge, and readiness Respond to the needs of students with varying levels of English language proficiency Manage a diverse classroom during inquiry science exploration Facilitate science discussions Deepen their own science content knowledgeAs the authors state, Inquiry science has little to do with textbooks and lectures and everything to do with our inherent need as a species to learn about and reflect on the world around us. Join your students on a journey of discovery as you explore your world via inquiry.

why do people love science: Stewards of the Grasslands Dana Reiter, 2023-10-16 This book offers a series of interviews with Canadian ranchers that highlight the innovative and effective ways that they manage vast swaths of grassland for two complementary goals: commercial viability and sustainable habitats. The book's author is an academic who grew up among ranchers in the grasslands of Canada, and the expertise and viewpoints she has distilled from these interviews complement the academic literature in accessible and surprising ways . As these productive landscapes face increasingly perilous threats such as development, economic pressures, and extreme weather events, it is the ranchers who live on and manage these native grasslands who are passionate about conserving them. This book is about them, their experiences and the realities of their lives, their view of the world, sharing their knowledge to assist younger ranchers, and their contributions to Canada's species at risk conservation goals, food security and economy. The book offers practical advice for ranchers, but also reveals the depth of attachment and dedication these ranchers have for the grasslands. They are conservationists at heart, as they not only understand that their livelihood is dependent on the health of the ecosystem they manage, but they also have a deep connection to the land, nurtured oftentimes for many generations. Academics and ranchers have much to learn here, but the book – most of which is the words of the ranchers themselves - is written to give the general public an understanding of this vocation and its role in the conservation of our last remaining grasslands.
