Ariss, Akram, Barzantny, Cordula, Brücker, Herbert, Dickmann, Michael, Mäkelä, Liisa, Muhr, Sara Louise, Saalfeld, Thomas, Suutari, Vesa, Zølner, Mette, 2023-03-13 Expatriation has been a topic of much research recently. The important role expatriates play in the internationalisation of an organisation and the resultant effects of such a work experience on the expatriates themselves, have fuelled the interest in this domain. This edited volume serves to provide fresh and timely insights into four areas, covering the individual, over the organisational, to the macro-level. First, the career paths of the expatriates, which not only garners them the career capital they may be able to utilise later in their career but also, the impacts of such an experience on their longer-term career success are in focus. The second block concerns the expatriation phase itself. A critical look is taken into the expatriates' identity and how it changes over time. Moreover, it discusses factors influencing the expatriates' well-being, embeddedness, and socio-cultural integration during their time abroad. Third, some key global mobility management challenges that organisations face, when managing expatriation, are introduced --such as flexible language management and how to become an international employer. Finally, insights are provided into the role of the host country policies - more specifically hostile environment and migration policies - on expatriate attitudes and behaviour, which has received less attention in previous research. All four areas are finally brought together to present a rich overview of future research questions that shall stimulate researchers and practitioners in their further deliberations. The chapters are based on selected results from the respective research subprojects of the Early Stage Researchers of the Horizon 2020 Global Mobility of Employees (GLOMO) project. This project was funded under the European Union's Research and Innovation Programme H2020 in the framework of the Marie Skłodowska-Curie Grant Agreement No 765355.

wonderland training 2 1: Frontiers of Statistical Decision Making and Bayesian Analysis

Ming-Hui Chen, Peter Müller, Dongchu Sun, Keying Ye, Dipak K. Dey, 2010-07-24 Research in Bayesian analysis and statistical decision theory is rapidly expanding and diversifying, making it increasingly more difficult for any single researcher to stay up to date on all current research frontiers. This book provides a review of current research challenges and opportunities. While the book can not exhaustively cover all current research areas, it does include some exemplary discussion of most research frontiers. Topics include objective Bayesian inference, shrinkage estimation and other decision based estimation, model selection and testing, nonparametric Bayes, the interface of Bayesian and frequentist inference, data mining and machine learning, methods for categorical and spatio-temporal data analysis and posterior simulation methods. Several major application areas are covered: computer models, Bayesian clinical trial design, epidemiology, phylogenetics, bioinformatics, climate modeling and applications in political science, finance and

marketing. As a review of current research in Bayesian analysis the book presents a balance between theory and applications. The lack of a clear demarcation between theoretical and applied research is a reflection of the highly interdisciplinary and often applied nature of research in Bayesian statistics. The book is intended as an update for researchers in Bayesian statistics, including non-statisticians who make use of Bayesian inference to address substantive research questions in other fields. It would also be useful for graduate students and research scholars in statistics or biostatistics who wish to acquaint themselves with current research frontiers.

wonderland training 2 1: **The Information Behavior of a New Generation** Jamshid Beheshti, Andrew Large, 2012-11-02 Has the information behavior of children and youth changed significantly over the last two decades? The Information Behavior of a New Generation: Children and Teens in the 21st Century attempts to answer this question from a variety of viewpoints. Thirteen researchers from educational psychology, computer science, education, and information studies have contributed to eleven chapters on models of information behavior, the cognitive development of youth, information literacy, everyday information behavior, cyber-bullying, gaming in virtual environments, learning labs, social networks, intellectual disabilities, and current and future systems. Whether they are referred to as digital natives, the Google-generation, or generation M, today's youth are active consumers and avid producers of digital information. Smart phones are the new generation's communication tools, social networks are their interaction venues, and virtual environments are their new playgrounds. This new digital communication era has prompted researchers from a variety of disciplines to contribute to this book on the information behavior of children and teens. One of the many conclusions that may be drawn from the chapters in the book is that information behavior is a multifaceted phenomenon, evolving alongside the rapid developments in information and communication technologies. The new generation tends to multitask, managing many activities simultaneously, such as scanning for and skimming information, texting brief messages, and posting audio and visual information on social media. While children and teens are tech savvy, they lack certain information and media literacy skills essential in today's digital environment. For researchers, the authors pose questions for further investigation in the hope that innovative services will be offered and novel systems will be developed to help the new generation. For teachers and information professionals, the authors provide a broad background to assist them with a more in-depth and thorough understanding and appreciation of children's and teens' information behavior.
