women of science fiction: More than 100 Sharon K. Yntema, 1988

women of science fiction: *Women Scientists in Fifties Science Fiction Films* Bonnie Noonan, 2015-02-18 In the 1950s, science was rapidly advancing, and so were scientific opportunities for women. Modern science fiction films reflected these simultaneous social developments. This book proposes that the social ideology of the 1950s, which was partly concerned with gender issues, saturated the B science fiction films of that era and inspired a new appreciation for the role of women in scientific advancements and other social achievements. Drawing on feminist literary and cultural theory, the author argues that the emergence of the modern American science fiction film in 1950 and the situation of post-World War II female scientists together created a film genre. That genre was explicitly amenable to exploring the tension between a woman's place in her home and her place in the work force, particularly in scientific fields. Early chapters provide a general introduction to the science fiction genre and specifically describe 1950s B science fiction films as they resonate with concerns proper to feminist theory. Subsequent chapters offer detailed, historically situated readings of 10 B science fiction films from the 1950s that feature women in science. The cinematic representations of female scientists are compared and contrasted with real female professionals of the time, illuminating the changing gender dynamics reflected in popular film in the 1950s. Films analyzed include *Rocketship X-M*, *It Came from Beneath the Sea*, *Them!*, *Tarantula*, *The Deadly Mantis*, *Beginning of the End*, *Kronos*, *Cat-Women of the Moon*, *World Without End*, and *Queen of Outer Space*.

It traces the origins of the genre, reviews the critical reactions and outlines the ways in which women's cyberpunk advances points of view that are specifically feminist. Novels are examined within their cultural contexts; their content is compared to broader controversies within contemporary feminism, and their themes are revealed as reflections of feminist discourse around the turn of the 21st century. Chapters cover topics such as globalization, virtual reality, cyborg culture, environmentalism, religion, motherhood and queer rights. Interviews with feminist cyberpunk authors are provided, revealing both their motivations for writing and their experiences with fans. The study treats feminist cyberpunk as a unique vehicle for examining contemporary women's issues and analyzes feminist science fiction as a complex source of political ideas.

women of science fiction: Sisters of Tomorrow Lisa Yaszek, Patrick B. Sharp, 2016-06-07 Anthology of stories, essays, poems, and illustrations by the women of early science fiction For nearly half a century, feminist scholars, writers, and fans have successfully challenged the notion that science fiction is all about boys and their toys, pointing to authors such as Mary Shelley, Clare Winger Harris, and Judith Merril as proof that women have always been part of the genre. Continuing this tradition, *Sisters of Tomorrow: The First Women of Science Fiction* offers readers a comprehensive selection of works by genre luminaries, including author C. L. Moore, artist Margaret Brundage, and others who were well known in their day, including poet Julia Boynton Green, science journalist L. Taylor Hansen, and editor Mary Gnaedinger. Providing insightful commentary and context, this anthology documents how women in the early twentieth century contributed to the pulp-magazine community and showcases the content they produced, including short stories, editorial work, illustrations, poetry, and science journalism. Yaszek and Sharp's critical annotation and author biographies link women's work in the early science fiction community to larger patterns of feminine literary and cultural production in turn-of-the-twentieth-century America. In a concluding essay, the award-winning author Kathleen Ann Goonan considers such work in relation to the history of women in science and engineering and to the contemporary science fiction community itself.

women of science fiction: The Planetary Humanism of European Women's Science Fiction Eleanor Drage, 2023-10-13 *The Planetary Humanism of European Women's Science Fiction* argues that utopian science fiction written by European women has, since the seventeenth century, played an important role in exploring the racial and gender possibilities of the outer limits of the humanist imagination. This book focuses on six works of science fiction from the UK, France, Spain, and Italy: Jennifer Marie Brissett's *Elysium*; Nicoletta Vallorani's *Sulla Sabbia di Sur* and *Il Cuore Finto di DR*; Aliette de Bodard's *Xuya Universe* series; Elia Barcelo's *Consecuencias Naturales*; and *Historias del Crazy Bar*, a collection of stories by Lola Robles and Maria Concepcion Regueiro. It sets these in conversation with key gender and critical race scholars: Judith Butler, Rosi Braidotti, Gayatri Chakravorty Spivak, Paul Gilroy, and Jack Halberstam. It asserts that a key concern for feminism, anti-racism, and science fiction now is to seek inventive ways of returning to the question of the human in the context of increasing racial and gender divisions. Offering unique access to contemporary and historical women writers who have mobilised the utopian imagination to rethink the human, this book is of use to those conducting research in Gender Studies, Philosophy, History, and Literature.

women of science fiction: *Women, Science and Fiction* D. Shaw, 2000-09-19 Since Mary Shelley drew inspiration for *Frankenstein* from the scientific speculations to which she attended as a 'nearly silent listener' at the now famous chateau in Switzerland, many other women have been similarly motivated to produce works informed by scientific theory. Successive chapters trace the history of women's science fiction writing from the turn of the century to the early 1990s, analysing how women writers have utilised the genre to critique the ideology that informs what counts as scientific knowledge.

women of science fiction: Science Fiction and Indian Women Writers Urvashi Kuhad,

2021-07-29 Science fiction, as a literature of fantasy, goes beyond the mundane to ask the question: what if the world were different from the way it is? It often challenges the real, builds on imagination, places no limits on human capacities, and encourages readers to think outside their social and cultural conditioning. This book presents a systematic study of Indian women's science fiction. It offers a critical analysis of the works of four female Indian writers of science fiction: Rokeya Sakhawat Hossain, Manjula Padmanabhan, Priya Sarukkai Chabria and Vandana Singh. The author considers not only the evolution of science fiction writing in India, but also discusses the use of innovations and unique themes including science fiction in different Indian languages; the literary, political, and educational activism of the women writers; and eco-feminism and the idea of cloning in writing, to argue that this genre could be viewed as a vibrant representation of freedom of expression and radical literature. This ground-breaking volume will be useful for scholars and researchers of English literature. It will also prove a very useful source for further studies into Indian literature, science and technology studies, women's and gender studies, comparative literature and cultural studies.

women of science fiction: Monstrous Women in Comics Samantha Langsdale, Elizabeth Rae

Coody, 2020-04-20 Contributions by Novia Shih-Shan Chen, Elizabeth Rae Coody, Keri Crist-Wagner, Sara Durazo-DeMoss, Charlotte Johanne Fabricius, Ayanni C. Hanna, Christina M. Knopf, Tomoko Kuribayashi, Samantha Langsdale, Jeannie Ludlow, Marcela Murillo, Sho Ogawa, Pauline J. Reynolds, Stefanie Snider, J. Richard Stevens, Justin Wigard, Daniel F. Yezbick, and Jing Zhang Monsters seem to be everywhere these days, in popular shows on television, in award-winning novels, and again and again in Hollywood blockbusters. They are figures that lurk in the margins and so, by contrast, help to illuminate the center—the embodiment of abnormality that summons the definition of normalcy by virtue of everything they are not. Samantha Langsdale and Elizabeth Rae Coody's edited volume explores the coding of woman as monstrous and how the monster as dangerously evocative of women/femininity/the female is exacerbated by the intersection of gender with sexuality, race, nationality, and disability. To analyze monstrous women is not only to examine comics, but also to witness how those constructions correspond to women's real material experiences. Each section takes a critical look at the cultural context surrounding varied monstrous voices: embodiment, maternity, childhood, power, and performance. Featured are essays on such comics as Faith, Monstress, Bitch Planet, and Batgirl and such characters as Harley Quinn and Wonder Woman. This volume probes into the patriarchal contexts wherein men are assumed to be representative of the normative, universal subject, such that women frequently become monsters.

women of science fiction: Transgressing Women Jamaluddin Aziz, 2012-01-17

Transgressing Women focuses on the literary and cinematic representation of female characters in contemporary noir thrillers. The book argues that as the genre has grown, expanded and been subverted since its initial conception, along with the changing definition of gender, the representation of a female character has also inevitably gone through some dramatic changes. So, the book asks some important questions: What links the female characters in canonical noir to their contemporary counterparts? Is gender division still relevant in a text that transgresses gender boundaries? What happens when it is the human body itself that betrays the traditional definition or constitution of a

human being? While many have written about the male protagonists and the femmes fatales in the noir genre, little attention has been given to the 'other' female characters who inhabit the noir world and are transgressors themselves. The main concern of the book is to trace the transgressive female characters in contemporary noir thrillers – both novels and films – by engaging itself with some of the most topical debates within both (post)feminist and postmodernist theories. The book is structured around two key concepts – space and the body. These temporal and spatial indicators are central in contemporary cultural theories such as postmodernism and post-feminism, along with other theorizations of gender and the noir genre. This means that the analysis is drawn from the classical noir examples and will then arrive at the neo-noir sub-genre, and then will move on to the most recent phenomenon in the genre, 'future noir'.

women of science fiction: British Science Fiction Cinema I.Q. Hunter, 2002-01-04 British Science Fiction Cinema is the first substantial study of a genre which, despite a sometimes troubled history, has produced some of the best British films, from the prewar classic *Things to Come* to *Alien* made in Britain by a British director. The contributors to this rich and provocative collection explore the diverse strangeness of British science fiction, from literary adaptations like *Nineteen Eighty-Four* and *A Clockwork Orange* to pulp fantasies and 'creature features' far removed from the acceptable face of British cinema. Through case studies of key films like *The Day the Earth Caught Fire*, contributors explore the unique themes and concerns of British science fiction, from the postwar boom years to more recent productions like *Hardware*, and examine how science fiction cinema drew on a variety of sources, from TV adaptations like *Doctor Who* and the Daleks, to the horror/sf crossovers produced from John Wyndham's cult novels *The Day of the Triffids* and *The Midwich Cuckoos* (filmed as *Village of the Damned*). How did budget restrictions encourage the use of the 'invasion narrative' in the 1950s films? And how did films such as *Unearthly Stranger* and *Invasion* reflect fears about the decline of Britain's economic and colonial power and the 'threat' of female sexuality? *British Science Fiction Cinema* celebrates the breadth and continuing vitality of British sf film-making, in both big-budget productions such as *Brazil* and *Event Horizon* and cult exploitation movies like *Inseminoid* and *Lifeforce*.

women of science fiction: More Than 100 Women Science Fiction Writers Sharon Yntema, 1990

women of science fiction: Women, Science and Fiction Revisited Debra Benita Shaw, 2023-03-24 *Women, Science and Fiction Revisited* is an analysis of selected science fiction novels and short stories written by women over the past hundred years from the point of view of their engagement with how science writes the world. Beginning with Charlotte Perkins Gilman's *Herland* (1918) and ending with N K Jemisin's *The City We Became* (2020), Debra Benita Shaw explores the re-imagination of gender and race that characterises women's literary crafting of new worlds. Along the way, she introduces new readings of classics like Ursula Le Guin's *The Left Hand of Darkness* and Margaret Atwood's *The Handmaid's Tale*, examining the original novels in the context of their adaptation to new media formats in the twenty-first century. What this reveals is a consistent preoccupation with how scientific ideas can be employed to challenge existing social structures and argue for change.

women of science fiction: Women, Science, and Fiction Debra Benita Shaw, 2000 *Women Writing Science Fiction: The Frankenstein Inheritance* explores the relationship between women, science and fiction through an analysis of science fiction written by women from the turn of the century to the mid 1980s.

women of science fiction: The Battle of the Sexes in Science Fiction Justine Larbalestier, 2023-09-05 Runner-up for the Hugo Best Related Book Award (2003) *The Battle of the Sexes in Science Fiction* is a lively account of the role of women and feminism in the development of American science fiction during its formative years, the mid-20th century. Beginning in 1926, with the publication of the first issue of *Amazing Stories*, Justine Larbalestier examines science fiction's engagement with questions of femininity, masculinity, sex and sexuality. She traces the debates over the place of women and feminism in science fiction as it emerged in stories, letters and articles in

science fiction magazines and fanzines. The book culminates in the story of James Tiptree, Jr. and the eponymous Award. Tiptree was a successful science fiction writer of the 1970s who was later discovered to be a woman. Tiptree's easy acceptance by the male-dominated publishing arena of the time proved that there was no necessary difference in the way men and women wrote, but that there was a real difference in the way they were read.
