women in medicine conference: *Women in Medicine* Anne Walling, 2025-06-30 In telling the history of women in medicine, the pioneers (especially the turbulent ones) are rightly remembered and celebrated in books, articles, memorials, awards, names of buildings, and organizations – even in stone statues and memorials. In contrast, the generation who began the transition from minority status to the current numerical equity are seldom memorialized, yet without the efforts of these few determined women in what was unambiguously a male profession, the achievements of these pioneers could easily have withered. This book is written to celebrate this unique generation of women who entered medicine between the Second World War and the early 1970s – determined women who just wanted to be doctors but ended up fundamentally changing the profession. Utilizing oral histories from 37 women who became physicians between 1948 and 1975, these women tell their stories in their own words and provide a valid picture of their experiences throughout their careers that has much resonance for those entering or practicing medicine today. *Women in Medicine: Stories from the Girls in White* will be of interest to all health professionals or those considering entering health professions, particularly women, and their advisers and supporters, to medical educators, and to medical historians seeking to understand the progress of women in medicine and other professions since the end of WWII.

women in medicine conference: *A Warrior of the People* Joe Starita, 2016-11-01 "An important and riveting story of a 19th-century feminist and change agent . . . put[s] the reader inside the very thoughts and emotions of La Flesche." —Chicago Tribune On March 14, 1889, Susan La Flesche Picotte received her medical degree—becoming the first Native American doctor in US history. She earned her degree thirty-one years before women could vote and thirty-five years before Native Americans could become citizens in their own country. By age twenty-six, this fragile but indomitable Omaha woman became the doctor to her tribe. Overnight, she acquired 1,244 patients scattered across 1,350 square miles of rolling countryside with few roads. Her patients often were desperately poor and desperately sick—tuberculosis, small pox, measles, influenza—families scattered miles apart, whose last hope was a young woman who spoke their language and knew their customs. This is the story of a Native American woman who effectively became the chief of an entrenched patriarchal tribe, the story of a woman who crashed through thick walls of ethnic, racial and gender prejudice, then spent the rest of her life using a unique bicultural identity to improve the lot of her people—physically, emotionally, politically, and spiritually. Joe Starita's *A Warrior of the People* is the moving biography of Susan La Flesche Picotte's inspirational life and dedication to public health, and it will finally shine a light on her numerous accomplishments. "A layered, nuanced portrait of this country's first [Native American] doctor . . . La Flesche's story is moving and illuminating, and Starita has done it justice." —Minneapolis Star Tribune

women in medicine conference: **American Women in Mission** Dana Lee Robert, 1996 The stereotype of the woman missionary has ranged from that of the longsuffering wife, characterized by the epitaph Died, given over to hospitality, to that of the spinster in her unstylish dress and wire-rimmed glasses, alone somewhere for thirty years teaching heathen children. Like all caricatures, those of the exhausted wife and frustrated old maid carry some truth: the underlying message of the stereotypes is that missionary women were perceived as marginal to the central tasks of mission. Rather than being remembered for preaching the gospel, the quintessential male task, missionary women were noted for meeting human needs and helping others, sacrificing themselves without plan or reason, all for the sake of bringing the world to Jesus Christ. Historical evidence, however, gives lie to the truism that women missionaries were and are doers but not thinkers, reactive secondary figures rather than proactive primary ones. The first American women to serve as foreign missionaries in 1812 were among the best-educated women of their time. Although barred from obtaining the college education or ministerial credentials of their husbands, the early missionary wives had read their Jonathan Edwards and Samuel Hopkins. Not only did they go abroad with particular theologies to share, but their identities as women caused them to develop gender-based mission theories. Early nineteenth-century women seldom wrote theologies of mission, but they wrote letters and kept journals that reveal a thought world and set of assumptions about women's roles in the missionary task. The activities of missionary wives were not random: they were part of a mission strategy that gave women a particular role in the advancement of the reign of God. By moving from mission field to mission field in chronological order of missionary presence, Robert charts missiological developments as they took place in dialogue with the urgent context of the day. Each case study marks the beginning of the mission theory. Baptist women in Burma, for example, are only considered in their first decades there and are not traced into the present. Robert believes that at this early stage of research into women's mission theory, integrity and analysis lies more in a succession of contextualized case studies than in gross generalizations.

women in medicine conference: Women, Medicine, Ethics and the Law Susan Sherwin, Barbara Parish, 2020-09-10 This title was first published in 2002: A collection of articles focused on women within a general study of medicine, ethics and the law. Topics covered include: areas where the institutions of medicine, ethics and the law intersect in women's reproductive and sexual lives; the impact of legal policies and dominant ethical beliefs on many aspects of women's health; and the health practices and policies of bioethics and health law. The editors recognise that it is important not to lose sight of social differences other than gender, such as race, ethnicity, class, age, sexuality, religion, level of physical and mental ability, and family relationships. In their approach they seek to consider the lives and experiences of women as primary. Hence, they focus on the question of how women's encounters with the health-care system are structured by gender and other socially significant dimensions of their lives (rather than the question of how women differ from the male norm).

women in medicine conference: Essays on Women, Medicine & Health Ann Oakley, 2019-08-06 In this collection of essays, Ann Oakley, one of the most influential social scientists of the last twenty years, brings together the best of her work on the sociology of women's health. She focuses on four main themes - divisions of labour, motherhood, technology and methodology - and in her own inimitable style, combines serious academic discourse from a feminist sociological perspective with a practical understanding of what it is to be women facing the often impersonal world of twentieth-century medicine. Updating and substantially expanding on her earlier work, *Telling the Truth About Jerusalem*, this new collection bridges the medical/social divide in an accessible and personable way.

women in medicine conference: Florence Nightingale on Women, Medicine, Midwifery and Prostitution Lynn McDonald, 2006-01-01 Volume 8: Florence Nightingale on Women, Medicine, Midwifery and Prostitution makes available a great range of Florence Nightingale's work on women: her pioneering study of maternal mortality in childbirth (Introductory Notes on Lying-in Institutions), her opposition to the regulation of prostitution through the Contagious Diseases Acts (attempts to stop the legislation and otherwise to facilitate the voluntary treatment of syphilitic prostitutes), her views on gender roles, marriage and measures for income security for women and excerpts from her draft (abandoned) novel. There is correspondence with women friends and colleagues from childhood to old age, on a vast range of subjects. Correspondents include old family friends, royal and notable personages, nuns and colleagues in various causes. Most of this material has not been published before and some letters will be new even to Nightingale scholars. Altogether a very different view of Nightingale emerges from what normally appears in biographies and other secondary sources. This material will enable a new assessment of her feminism, her relations with women and her contribution to improving the status of women of her time. Currently, Volumes 1 to 11 are available in e-book version by subscription or from university and college libraries through the following vendors: Canadian Electronic Library, Ebrary, MyiLibrary, and Netlibrary.
